The inside we have also lathed, putting on common house plaster. This makes a building frost proof and almost fire proof, and at small cost in comparison to its permanency. Besides it is ornamental and never needs any paint. In the end such buildings are by far the cheapest. We put in roof windows which give the best light and make the building warmer.

Now we have a tractor and often five cars in the building. We are very proud of our garage.—C. R. Bashore, Berks County, Pa.

Shipload of Potatoes

ACCORDING to press statements the British Steamer Dunston sailed recently from St. John, New Brunswick, with a cargo of 50,000 bushels of New Brunswick potatoes for the British market. This cargo, it is stated, was the largest shipment of potatoes ever to leave Canada, and is indicative of the increased demands which are coming from England for New Brunswick potatoes as a result of the favorable impression which the first shipments of stock from New Brunswick have made there. It is stated that complimentary cables have been received from British buyers who have been handling New Brunswick potatoes, and the market in London for New Brunswick stock is better, according to recent cable advices.—Department of Immigration and Colonization, Ottawa, Canada.

Boys Make 400 Club

TWO Potato Club Members qualified for the Pennsylvania 400 Bushel Potato Club. They were Howard Fox, Butler County, 481.2 bushels, and Donald Snook, Chester County, 470.2 bushels. Howard Fox is sixteen years of age, but an old hand at the potato game. In 1922 he won first prize in the Winfield Club and has been improving ever since.

Donald Snook is fifteen and this is his second year in succession to make the 400 Bushel Club. Some folks said last year that it was an accident. But the fact that Donald repeats again this year makes it look like the real thing.—Keystone Klub Komments.

More Money from Your Crops
You can do it with seeds that have vitality and life—that are of high germination and adapted to the soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. But the crop tells the story; added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.
46 Years of Better Seeds
For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Ceaseless experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality — they plant Isbell's seeds year after year and get bumper crops.
We grow our own seed—you buy direct from us, saving money and eliminating all risk of substitution.
This Valuable Book—FREE

Our Young People's Forum

Cousin Ruth's Letter

Hello Everybody:—I wonder, had any of you begun to think that I'd been lost, strayed or stolen? Well, more than two weeks ago I did stray away from my office desk and ever since I've been flat on my back in a hospital bed. But today is different. I'm really, truly sitting up once more and the first thing I'm doing is to write you friends of mine.

My, it will be good to read your letters again — someone has been reading them for me and she says they're interesting as can be. I've missed hearing from you a lot but now I hope to be back with you in short order.

Even tho I couldn't be out-of-doors I've had glimpses of blue sky and gray sky thru my window and whirling, swirling snowflakes have played outside where I could see them. When I felt the very worst my nurse would open that same window and let in the winter weather, so crisp one just couldn't help but get well. And I've had summertime, too, bunches and bunches of the loveliest flowers, so that I scarcely know what time of year it really is.

Today I'm all fixed up with pink ribbon bows on my pigtails and tomorrow I may go chasing out my door, down the hall and out-of-doors in a wheel chair. I'm hurrying as fast as I can, you see, to get back to you.

Many jolly good times to one and all these wintry days.

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—How do you like this kind of weather? At seven o'clock this morning it was sixten below zero. I began to think we were getting a taste of Greenland. When daddy took me to school the roads were so drifted I thought we would not get thru.

This week we are having our monthly "exams." I wonder if you all hate them as bad as I do. We have sixteen pupils in our school and only two of us in the eighth grade.

What is the matter with the boys and girls of Montour County? I have not seen any letters from them lately.

It will soon be time for the poem and spelling contests. Last year I was sick with the scarlet fever at that time and missed the fun.—Mildred A. Fenstermacher, Montour County, Pa.

Dear Cousin Ruth:—I am going to school every day. The name is Prospect Hill School. I live in the country near Greenville, Pa. I have seven pets and two chickens. Tiny is a very small dog; she is a rat terrier.

Oh! I forgot to tell you we play lots of games. Our teacher plays with us. I ride my pony Dan every day; he is all white—the prettiest thing you ever saw. I feed him corn, oats and hay.—Leoda Meyer, Mercer County, Pa.

Dear Cousin Ruth:—I am nine years old and live on a farm about seven miles from Hanover. I have four pet cats and one dog. I have a mile to go to school. I didn't miss a day so far this winter. I am in the fourth grade. We have twenty-nine pupils in our school. We had a nice Christmas tree. The weather is cold and icy; I like summer best.

I have two brothers and one sister. I am the oldest. I am away from home; my mamma died when I was seven. I go home every three or four weeks, which I enjoy. I am fond of dollies and have five.—Margaret E. Rohrbaugh, York County, Pa.

Dear Cousin Ruth and Forum Friends:—This is my first letter. I have two brothers—Richard, nine, and Russel, two. We live on a farm. I like the farm. I go to school and am in the sixth grade. I like to go to school. Richard and I take music lessons every Saturday. We have a pony and we take him when it's nice. His name is Beauty and he is very gentle. We have two dogs, Gypsy and Fanny. Gypsy follows me wherever I go. She is an Airedale. We have three cats, Tiger, Nigger and Spottie. How do you folks enjoy the snow? I enjoy it as I go coasting.—Dorothy Rudy, Lebanon County, Pa.

Dear Cousin Ruth and Forum Friends:—I enjoy reading the Y. P. F. We have taken Pennsylvania Farmer for a long time and we all read the Y. P. F. I would like to join your fun. I am eleven years old and in the sixth grade at school. I have two brothers whose names are Floyd and Kenneth. For pets I have two little kittens and six little banties. The kittens' names are Fluffy and Neggie. Here are some riddles:

1. What ties two people together and yet touches only one?
2. What is it that has neither flesh nor bones yet has four fingers and a thumb?
3. Why is the figure nine like a peacock?

WINTER SPORT
Leroy Sensenig, Lancaster County, Pa.

4. What four letters would frighten a thief?
5. What is the ugliest hood ever worn?—Philma Klipple, Lackawanna County, Pa.

Dear Forum Friends and Cousin Ruth:—I am twelve years old and am in the seventh grade. I go to the country school called Franklin Center School. There are only seventeen pupils in our school.

I have one sister and four brothers. I live on farm and have many pets, too. I have a little white dog, his name is Whit'e. I am sending you a recipe for butter scotch.

2 cups sugar
2 tablespoons water
2 tablespoons butter

Boil without stirring until brittle when tested in cold water. Pour out on buttered plate to cool.

Cousin Ruth, did you see the sun eclipse? I did. May I come again? —Mary Belensky, Erie County, Pa.

Dear Cousin Ruth and Forum Friends:—I do not belong to the club, even tho I do read the many interesting letters and recipes that are often on the page. I have been a silent reader every since I have been able to read.

I live two miles from a village. I do not go to the school there but I go three and one-half miles to school.

We live on a farm and have horses, mules and cows. For pets I have two cats and two dogs.—Dorothy Dunbar, Bradford County, Pa.

Dear Cousin Ruth and Forum Friends:—May I join your happy circle? I am eleven years and and live on a farm of about seventy-four acres. I go to the Smullin School and am in the sixth grade.

For pets we have dogs, cats and a pair of rabbits.

I would like to see some more letters from Armstrong County soon. I am sorry I have no pictures to send. We have taken Pennsylvania Farmer for about six years and like it very much. I always turn to the Forum page first.—Lois Shumaker, Armstrong County, Pa.

Dear Cousin Ruth and Forum Friends:—

Here I am again you know,
And the ground is covered with snow.
Girls with skates and boys with sleds,
Some fall down and hurt their heads,
While others go with a scratched nose
And others go with torn clothes,
While mother sits with needle and thread
To darn stokings that have been torn on the sled.
Some little children get hit on the head
And for several days have to stay in bed.
Now listen my children, Maggie and Ted,
You be careful when you go to sled
Or you may get hit on the head
And for several days have to stay in bed.
That is what my mother said.

Good-bye for this time.—Hilda Hiddleson, Chester County, Pa.

From Four Schoolmates

Dear Cousin Ruth and Forum Friends:—I have been reading Pennsylvania Farmer ever since I could read. or pets I have three cats and one dog; his name is Jack, the cats are called Tom, Dicky and Mid. I live on a farm. I go to Pike School. I have four sisters and one brother. We have cattle, horses and a pony. The pony is brown in color. There are fifteen in our school. I am eleven years of age and am in the fifth grade at school.—Mamie Jane Stover, Centre County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading Pennsylvania Farmer for a number of years. For pets I have one tiger cat, her name is Tabby. I have an Airedale dog, her name is Fanny. She is a watch dog, too. At home we have two horses, two mules, eight head of cattle and twenty head of pigs. I live on a farm of seventy-two acres. I have lived on a farm for five years. I am fourteen years of age. I go to school every day. I like to go and I also like my teacher and all my schoolmates. My teacher's name is William Keen and my school mates' names are Ada Rossman, Mamie Stover and Miriam Stover.—Mildred Wilson, Centre County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading Pennsylvania Farmer for a number of years and sure think it is a good paper for the girls and boys. I am going to tell you about my friend on the farm. I have a pet dog whose name is Sport, and also some kitt named Tommy, Buttercup and Bus er. We have horses, cattle and chick ens. I live on a farm.

I am twelve years of age and g to the Pike School.

I have two brothers. One is fiftee years old and the other is ten year old.—Ada E. Rossman, Centre Co ty, Pa.

Dear Cousin Ruth and Foru Friends:—Here I am, I come fro Centre County. As this is my secon letter to the Forum it can't be ve long, altho my first letter was neve printed.

I am fifteen years of age and g to Pike Academy. I am in the eight grade. I live on a farm; we hav horses, cattle and pigs. I have a pe pony which I ride to fetch the cow and to take them to the field. If sh is in a field she won't let anyon come near her that is strange. If the try to ride her she will throw them

My schoolmates and I decided t write to the Forum and try our luck Our school is not very large.

The boys and girls of Centre Cou ty had better wake up or we will b in the background.—Marion Stove Centre County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—If you will fill in the white squares in this puzzle with the letters found in the bottom line, you will find a message to you all. I think you will have better luck if you will remember what day we celebrate on the date of this issue of Pennsylvania Farmer. Understand, you will have to re-arrange only the letters which you find on the bottom row of the puzzle, placing them in their correct white squares. When you have found the answer, send it to me on a POSTAL CARD not later than February 21. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in January 24 issue of Pennsylvania Farmer is: PENNSYLVAN NEW JERSEY, NEW YORK, DEL WARE, MARYLAND.

The prize winners are: Ro Knox Fears, Jr., age 9, Chesape City, Md.; Roy Hanawalt, age McVeytown, Pa.; Lizzie C. Him age 8, Punxsutawney, Pa.; Alv Holsopple, age 9, Holsopple, Pa Walter M. Kohler, age 8, Kutzto Pa.; Ruth Kriner, age 9, Orwigsbu Pa.; Emma Steele, age 9, Henders Md.; Ralph Sweigart, age 10, Ne Holland, Pa.; Doris Taber, age North East, Pa.; Mary Weidner, a 9, West Leesport, Pa.

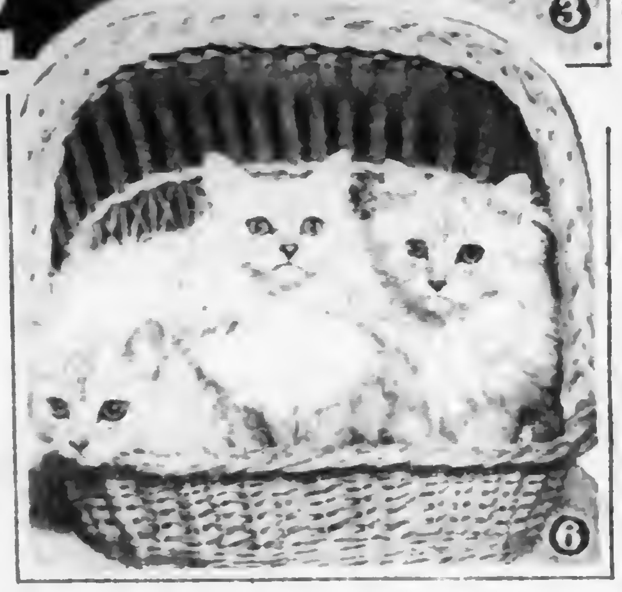
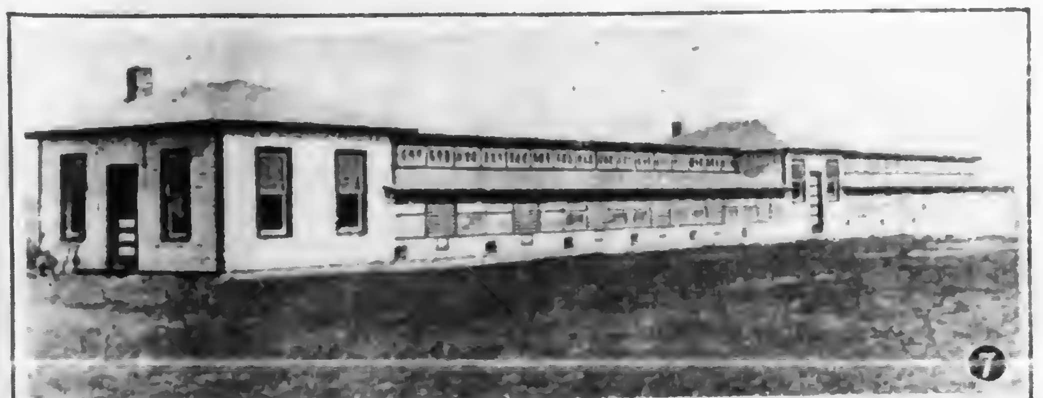
PASSING EVENTS IN PICTURES





(Copyright by Underwood & Underwood)

1.—Something real in their Valentine party—this couple recently celebrated their sixty-fifth wedding anniversary.
2.—The very latest in tobaggoning demonstrated at Lake Placid, New York,—all you need is a pair of skis, plus plenty of nerve. The sliding will take care of itself.
3.—Mrs. Everett Sanders, wife of the President's new secretary, is a home-loving person, already popular in the congressional set.
4.—One New York traffic patrolman can control a system of twenty-five signals from this switchboard installed on Broadway
5.—A picturesque bit of Mexican architecture, "The stone sails of the Virgin Mary."
6.—Bluebloods in catdom—three prize winners at the annual show of the Silver Society at the Waldorf-Astoria, New York.
7.—Illinois tries out this model poultry house. The idea is that plenty of sunshine by day and cheery electric lights at night will keep the flock laying fourteen hours out of the twenty-four.
8.—The equipment of the Navy's motion picture men before embarking in the Los Angeles to photograph eclipse of the sun.

When Stinginess Is a Virtue

Things Our Folks Should Not Be Asked to Share

AT THIS season of the year, with its storms and sudden changes, many germs are afloat and colds are almost epidemic. How much of this is due to misplaced generosity on the part of the first victims? Instead of keeping their germs strictly to themselves, they seem possessed to share them.

What about the dipper or glass at the kitchen sink? Many pepole who insist on individual cups at the table, drink from a common glass between meals. If one member of the family has a cold, his drinking from that glass has poisoned it for the rest, and the first thing you know, the whole family is down with colds.

Men the Worst Offenders

What about the handkerchief? How much does mother save herself by using her own handkerchief for baby instead of getting another? If mother has a cold, she is transferring it on the handkerchief directly to the baby, and the result is another victim.

What about spitting in places where the next passer-by may become infected. Many men (they are more frequent offenders in this respect than women) argue, like Brer Rabbit in the Uncle Remus stories, "What's a big man like me gwine do when he wants to spit?" If spitting is really beyond their control, then in justice to their fellow citizens men ought to carry cups as are given to tuberculosis patients.

What about "gobs" of chewing gum? There are department stores in some of the big cities where signs request customers not to "park" their chewing gum "here," and suggesting less harmful places. The sharing of germs is quite as sure and deadly thru the medium of gum as thru any direct transfer of the saliva from an infected person to a well one.

Handshaking Passes It On

What about shaking hands all around in a big gathering and then putting food into the mouth with the same hand that has done the shaking? It is probably impossible to prescribe for a community gathering the rule that makes for safety at home—a thoro washing of the hands before using them to handle food. It is probably ridiculous to follow the suggestion of a certain health crank, that we "keep the right hand for greeting and the left hand for eating."

The easiest and simplest way out of the difficulty is for the person who has gathered in a big harvest of germs to stay away from places where he could so easily bestow them on others.

What about putting the thumb in the mouth before turning the leaves of a book or counting a roll of bills? If everybody's saliva could be dyed bright blue, we should be horrified to find how many bright blue patches we had left on paper money and books. And the question is, "Who did it last, who's going to do it next, and who's going to fall by the wayside because of the germs with which we were so needlessly generous?"—I. S. H.

A Birthday Suggestion

THERE are many folks dear to me scattered over this big country. They all have natal days and are happy to have them remembered. But not one of them has an apple orchard. Out of this cherished possession of ours came a birthday thought.

I have a little nephew in Georgia. One summer when he started North for a visit to us his father gave him this parting instruction: "Son, this is your opportunity. Fill up on apple sauce."

I made an apple sauce cake and sent it to the laddie for his birthday. It was a great success. I deemed it a happy discovery.

"Gee, that cake was peachy," wrote one of the leap year twins from Connecticut.

"That must be your famous apple sauce cake. C— orders a recipe," said a letter from Indiana.

"I served some with whipped cream. Delicious!" J. M. said. "Tastes like plum pudding." This was a message from Savannah.

It has the shipping and keeping qualities of fruit cake. I make it in a breadtin loaf for parcel post. This is my recipe:

1½ cups thick apple sauce

1 cup sugar

1 heaping tablespoon butter (melted)

1 teaspoon soda (scant)

1 teaspoon cinnamon

½ teaspoon cloves

½ teaspoon nutmeg

1½ cups flour (varies with thickness of apple sauce)

½ cup raisins, floured before adding to batter.

Citron may be added.

Many happy returns of the day.—Nora Del Gumble.

Have You a Thrift Box?

THIS is the time of year to talk inventory and savings. It suddenly occurred to me that my thrift-box came under those headings when my niece called out to me:

"Auntie, what have you got stored away in that big trunk up in the room where I sleep? I'm just dying to look into it. May I?"

"Yes, dear," I answered, proud to show what I had achieved in "made-overs from left-overs." "This is my thrift-box. Into it go all the things I re-make from odds and ends. These two comforter tops I pieced from larger pieces, cut in oblongs and squares. That other one, in triangles pieced in long strips and joined with three-inch pieces, was made from the narrow remnants of the first two.

Treasure of Many Sorts

"From odd pieces I made this log cabin design. The 'snips' I joined on the machine into thirty-inch long strips and then sewed them on this piece of green burlap. It made a handsome fluff rug. The colors are mixed thru hit or miss. After all the strips are sewed on, I clip them off evenly with the shears.

"Here are two petticoats. This black mohair was an old dress skirt. I made it narrower and put this old silk dust ruffle on the bottom. This green one was a summer skirt that went with a coat suit. You see the goods are light weight. The ruffle is some of that wide ribbon that did service on a hat.

"Here is a pretty apron made of two pieces of percale. The lower part was left from a blouse, a light blue figure on a white ground. The binding and upper bib were made from the left-over parts of a blue bungalow apron which exactly matched in color.

"This boudoir cap was an old net waist. The little pink velvet bow was a left-over.

"Now see this cover! I like to leave my dining table set, but I want to protect the dishes from stray dust, so I made this cover from a hundred-pound flour sack. The two-inch border is a piece of challis left from a quilt lining.

The House Comes in for a Share

"These cushions are for the hammock and are filled with finely cut snips such as we used to fill ambulance pillows in war time. These heavy mittens, made from a heavy overcoat sleeve and lined with pieces of old, soft stockings, are for dusting and polishing my stove. Just a few drops of oil, and this polisher does the rest, and your hands are kept clean!

"Here's a suit of Tom's. That was a sight! Edges all frayed, buttonholes torn, the seat all out. I washed and 'mending-tissued' and patched and steamed and pressed and stitched—and pressed some more. That suit will last a long time for common wear. I learned a few secrets from a tailor, and I flatter myself that my work looks as good as his.

"And now we are at the bottom of the trunk. Did you enjoy it?"

"Did I? Why, I'm just bubbling over with the pass-it-on fever!" And I felt that I had made another thrift convert.—Mrs. E. A. K.

Bloomers Needn't Match

SEVERAL years ago I gave up making bloomers to match my daughter's dresses. Invariably one needed washing when the other did not—and usually one wore out before the other.

I tried black sateen bloomers of the best quality for school—but it did not seem to me they wore as they should. Last year I learned that poplin comes in all colors, and I tried making black poplin school bloomers. I found it much more satisfactory than the sateen, so this year daughter's school bloomers are being made of black poplin. The bloomers for dress up are being made of white poplin.—Mrs. May H. Mumaw.

Home Milliners, Take Note

This Model Can Be Worked Up in Many Fabrics

THE popular felt hat of the season can be made at home for the sum of fifty-six cents. The pattern, which originated in the girls' clubs of the New Jersey Extension Service, includes a brim and a pie-shaped piece for the sectional crown. Three-eighths of a yard of yard-wide felt makes one hat.

The pie-shaped section is calculated from the head size measure, taken by placing a tape over the forehead and straight around the head. Using a twenty-four-inch head size as an example, draw a horizontal line six inches long, or one-fourth the head size measure. From the centre of this line, draw a perpendicular line seven and one-half inches long. From the ends of the six-inch line draw three-inch lines parallel with the seven and one-half inch line. Connect the three points with graceful curves. When cutting the pattern from felt, allow three-eighths of an inch seam allowance on the curved edges.

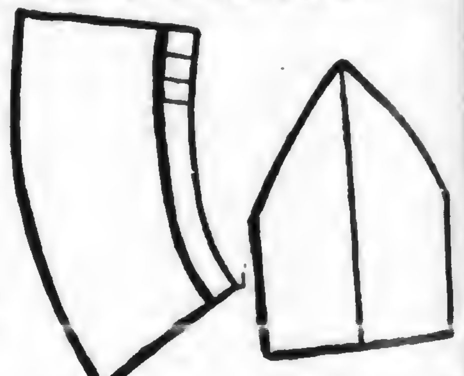
Getting the Size Right

Cut four sections. Stitch together in groups of two, then join with a continuous seam. Using a sleeve board and small iron, steam the seams flat on the under side. When cutting the brim, allow one-fourth inch for lapping. For a smaller head size than a twenty-four-inch one, take off half a flat seam, slip-stitching it on both sides. Now measure one inch from the inside edge of the brim, mark it and draw the head size line around the brim one inch from the edge. Cut slashes one inch apart, at right angles to, and just up to the head size line. Hold the crown with the head size away from you and the brim with head size towards you. Place the crown over the brim, joining a section seam to the brim seam, which is the back of the hat.

Trimmings Give Variety

Baste and stitch around the head size line, allowing the slashes to go inside the hat. Steam out the excess fullness of the brim and turn it up ready for trimming.

A narrow felt band and a flat bow makes a tailored finish. Feather pompoms, plain or touched up with gilt paint, are very good and cost only fifty cents. Attractive hats are made with two-colored sectional crowns and trimmed with felt pompoms from eighth-inch strips of left-over felt. Cut-work is very smart, also chenille couching or blanket stitching. Felt bows of all kinds may be used on the crown or brim. Colored petals or leaf shapes, placed end on end, on the brim, or colored circles around the crown, give variety.—E. R. D.



Aren't Invalids Folks?

They Enjoy Your Little Acts of Thoughful Care

AREN'T invalids folks? One would think not, judging by the way some of them are treated by their families and friends. But, oh, they are just plain human folks like you and me and their feelings aren't dulled by the disease which shuts them off from active life. If only those of us who are in better health could realize how sensitive these more delicate sisters and brothers are, and govern our manner toward them accordingly.

The other day I spent several hours in a home where the members of the family are invariably "kindly affectioned toward one another." One has for years been a hopeless invalid, able to be about the house, and now and then to do some light task, but knowing that she can, in all probability, live but a few years.

Everything that medical science can do for her has been done, and she receives the best of care. But—

Not Considerate of Others

The one who takes care of her announces time and again, in her hearing that she "hates to be around sick folks." She "does her duty," of course, but merely because it is her duty. The family discuss the invalid's symptoms freely, too, in her presence. But she takes no part in such discussions, and I'm quite sure she doesn't enjoy them.

A second invalid I know is not allowed to "turn her hand" in her son's home, where she lives. She is old, and until recently, she has led an active life. But the son's wife, who is an exemplary housekeeper, thinks, and says, that it is much easier to do all the work than to "go after Mother M."

Another invalid has to listen to the whole history of her case, what this doctor thinks, and what that one hopes, whenever a guest asks after her health. And what she wants is to be helped to forget, not made to remember, all the distressing details.

They Enjoy Doing Something

Invalids are folks, and a little imagination would put many a thoughtless person in the place of someone who is not well.

Of course, their activities are limited, but why not help them to forget this fact by forgetting it ourselves? Couldn't we make life easier for them by asking our invalids to perform certain light tasks—when they are able? The feeling of being useful, even in a small way, is a very pleasant one, and all pleasant, cheerful thoughts and feelings are conducive to better health.

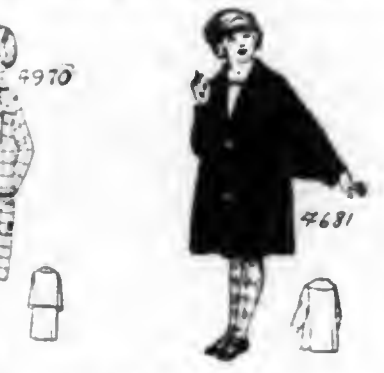
Don't insist upon doing things for an invalid that she can just as well do for herself, and ten chances to

(Continued on page 31)

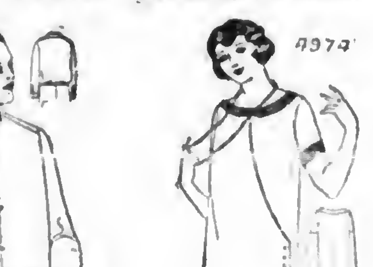
What You've Been Wanting

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

4970.—School Frock.—Plaid suiting will be good for this style. Collar, cuffs and pocket facing may be of flannel in a contrasting shade and bound with braid. This model is likewise attractive in velveteen or in gingham and other wash fabrics. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅝ yards of 36-inch material. For collar, cuffs and pocket facings of contrasting material three-eighths yard 40 inches wide is required. Pattern, 10 cents.



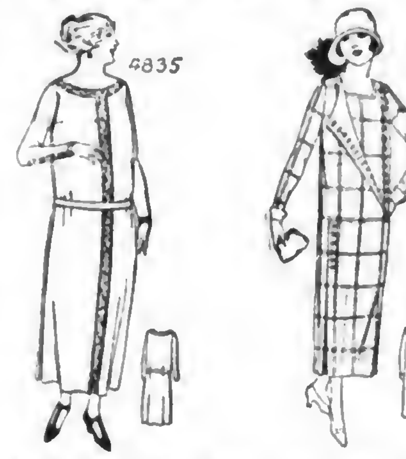
4681.—A Comfortable Coat.—This is a good model for covert cloth, for heather mixtures as well as for pongee, kasha, twill and velours. The sleeve is new and very comfortable. Five sizes: 6, 8, 10, 12 and 14 years. A 12-year size requires 3¼ yards of 40-inch material. Pattern, 10 cents.



4974.—A Pretty Blouse.—Faille, silk or satin, with embroidery or contrasting material would be pleasing for this model. It is also good for crepe, crepe de chine or linen. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅛ yards of 32-inch plain material, and one-half yard of contrasting material, if made as illustrated in the large view. Without the long sleeve portions 3¼ yards of plain material is required. Pattern, 10 cents.

5001.—Practical Shirt Model.—Linen, cambric, percale as well as silk, madras and flannel may be used for this design. Eleven sizes: 13½, 14, 14½, 15, 15½, 16, 16½, 17, 17½, 18 and 18½ inches neck measure. To make the shirt for a 15-inch size, with long sleeves will requires three yards of 36-inch material. With short sleeves 2¾ yards will be required. Pattern, 10 cents.

4835.—A Good Style.—Silk alpaca and embroidery are here combined. One could use figured and plain silk, linen or crepe. Eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38-inch size requires 4¾ yards of 40-inch material, if made of one material. If made as illustrated it will require 1⅜ yard of figured material 18 inches wide, and 3¾ yards of plain material 40 inches wide. The width at the foot is 2⅜ yards. Pattern, 10 cents.



4984.—A Youthful Dress.—This is a pretty style for the new plaid woolens and silks. The right front forms a wide revers. The skirt portion is finished with a separate panel which forms graceful plait fulness. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4¼ yards of 40-inch material. To face cuffs and revers portion of the front requires one-quarter yard. The width of the dress at the foot is 1¾ yard. Pattern, 10 cents.

Your Choice of Two Popular Brands

EVER SINCE 1872 the Goodyear "Gold Seal" trademark has stood for *super-quality* in rubber footwear, *and always will.* No better rubber footwear is made than "Gold Seal".

Of equally favorable recognition is the Lambertville "Snag-Proof" line, which for half a century has paralleled Goodyear "Gold Seal" goods in popularity. "Snag-Proof" rubbers, boots, and overshoes are the highest grade *standard quality* rubber footwear obtainable, and are made with the same care and expertness as "Gold Seal" goods.

Both of these brands — Goodyear "Gold Seal" and Lambertville "Snag-Proof" — are products of the Goodyear Rubber Company and afford our friends their choice of these two popular lines of rubber footwear — the best *super-quality* and *standard quality* goods you can buy.

Sold by most good shoe merchants everywhere.

GOODYEAR RUBBER COMPANY
General Offices: 787-89 Broadway, New York
Branch Offices:
Philadelphia, Pa., 26 No. Fourth St.
Chicago, Ill., 31 South Franklin St.
Milwaukee, Wis., 85-89 Buffalo St.
St. Paul, Minn., 371-77 Sibley St.
Kansas City, Mo., 807 Baltimore Ave.
St. Louis, Mo., 1103 Washington Ave.
Portland, Ore., 61-67 Fourth St.
San Francisco, Calif., 539 Mission St.

This gold trademark, like the "Sterling" mark on silver, is a guarantee of *super-quality.*

GOODYEAR RUBBER CO. GOLD SEAL 1872

LAMBERTVILLE RUBBER CO. "SNAG-PROOF" REG. U.S. PAT. OFF. E. Stout's Patent

This trademark, in green, identifies highest grade *standard quality* rubber footwear.

On Washington's Birthday

Novel Dances and Games That Bring Merriment

LAST year we planned a dance for Washington's Birthday which made much talk and laid the foundation for a similar one this year to be held for the community in our town hall.

The invitations were historical hats about three inches square made out of odd bits of silk, paper and ribbon about the house, folded flat and enclosed in large envelopes suggesting that the rest of the costume be paper.

When the guests arrived on the 22nd, the house was lighted by candles. Billy and Marie, dressed as George and Martha Washington, received while patriotic airs were being played. Many guests came in paper costumes, even to clever shoes laced with plaited strings. There was no need of other decoration than the candles and these picturesque figures.

Instead of dance orders, my brother, dressed as "crier," made announcements. First there was an "Indian Fox Trot," a lively piece in which the prize went to the couple who danced most gracefully. Phil and Louise won the prize—a fierce rubber doll made into an Indian with painted feathers.

Fashion Books Notice

SEND 10c in silver or stamps for our up-to-date Spring and Summer 1925 Book of Fashions, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker. Address Pattern Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

Jack Tried Ballet Dancing

For the "Minute Ballet," we passed out numbers, then asked the eighteen who held numbers containing four to come forward. In groups of six, they entertained the others by dancing, each choosing a leader to follow. Now this was funny! Jack Belding couldn't help but be a clown and if he had never been taught to dance a ballet, he had observed a lot which he used to advantage. Little dolls dressed in old-time costumes were given out to the winning group. They soon found that the wigs were little powder puffs—even the boys using them to freshen their fevered faces.

Then came the "Declaration of Independence," a one-step Paul Jones in which the girls showed their independence by trying not to be caught with their original partners when the music suddenly stopped, their partners doing all they could to stay with them. Those caught had to leave the dance until there were only two left to receive the prizes—a little wooden rolling pin filled with candied cherries and a long document of freedom which the man read aloud. Billy wrote this declaration in the privacy of his own den and none of us knew what was in it, but it certainly declared him—free!

The Confetti Battle

For the "Last Battle," each girl was given a large package of colored confetti and told to get as much as she could of it on the other girls while keeping her own self as free as possible, during the dance. Confetti sticks to some materials while it slides off of others. Ruth Meyborn kept her hair entirely free, winning the prize of a little old gun which really has a history.

For "Conquerors," we marked the porch floor off into sections with white chalk and started a waltz. The music suddenly stopped and those in certain sections were taken from the floor. When only Bob and Mary were left, smiling and happy, expectant of the prize, we handed them combs and thin paper and demanded "Yankee Doodle!" I must say they were both good sports, offering as an encore, "Yes, we have no bananas!" which we accepted and recognized.

We served refreshments wherever the guests might be. Billy made me two large tin molds, one bell-shaped and the other hatchet-shaped. I served cherry custard in both these shapes with a generous amount of chopped candied cherries on top. With them were trays of little white cakes, looking like flags, with red and white striped icing, set in a frill of blue paper. Baskets of candied cherries, lime hatchets and stuffed fruit were passed.

"I'll Say She Does"

In "Captives" I used those who had not obeyed the invitation to dress in paper. Each one was called out and asked to do the "Apache"—the "Mexican Whirl"—"Russian Stampede" or some odd dance for our benefit. Partners were allowed and every one of the dances proved a bit of clever fun.

For the "Washington Waltz" we blew out some of the candles and used only bells for music. The crier announced the last dance of the evening, "Freedom and Reward." As the music started, everyone was given a string and told to pull. The ends of the strings disclosed little silk flags, Washington heads or hatchets, strings of cherries, bells or other suitable favors.

But my reward came when my boy, Billy, turned at his door to look back, his face lighted with a new thought. "I noticed you laughed a lot tonight, Mumsy!" he said. "Bet you love a good time as well as we do!" I forgot that a mother ought to avoid slang when I called back, "I'll say she does!"—E. M. P.

Put to a New Use

THIS sewing basket, so unique in design, is made from a wire lampshade frame bound with ribbon or tape and lined with tan silk held in place along the rims with glue. The outer covering of heavy corded silk is also glued into place and the gold braid and flowers appliqued in the same manner, using the best quality of liquid glue. Cardboard covered with silk is fastened in to form a bottom and a larger piece is covered and hinged to the top with ribbon for a lid.

Aren't Invalids Folks?

(Continued from page 29)

one, would like to do. And when it is necessary to wait upon her, don't give the impression that you are doing it merely from a "sense of duty."

Why is it that jelly and custards are the time-honored gifts for an invalid? One invalid hated jelly, but she loved the little "sample" cakes that a friend baked for her from a bit of batter every time she tried a new recipe.

Interesting Bits of News

Invalids like to know things—funny things, serious things, beautiful, cheerful, or intimate things. When they can't sleep at night, they want to have their minds full of things to think about. Tell how many four-leaf clovers you found in your walk across the pasture field. And what was that funny thing your two-year-old said yesterday? How you fooled your family by making up some left overs into a brand new dish—these are interesting.

If your particular invalid is noticeably thin and pale, or looks very ill, don't let her know that you notice it. Very few people really "enjoy poor health" and the best of us like to deceive ourselves into thinking that we look better than we feel. It is a harmless deception—help it along! It isn't necessary to remark on every new sign you notice of the ravages of disease.

Teach the Children Kindness

Above all, teach the children not to stare at an invalid or one who is deformed. A child is naturally tender hearted—also, he is naturally curious. But he can soon be taught that it is very unkind to notice physical handicaps of any kind, and then the chivalry and kindness in his nature will help him to overcome his natural human curiosity. Pain and weakness cause hurts enough—no one really wants to add more to any human life.

Some time ago, a popular magazine conducted a letter contest on the subject: "What I Kick Most About." A letter written by a crippled girl won first prize. Everyone who is, or has been, physically handicapped will sympathize with her mood when she wrote, in substance, "What I kick most about is having people constantly reminding me, by their stares, that I am not like other folks. I'd like to forget it." And so would most invalids.—H. P. M.

FRIED CAKES I

2 cups sugar
2 eggs
1 cup sweet milk
4 small or 2 large teaspoons baking powder
3 medium sized mashed potatoes
½ teaspoon, each, vanilla and nutmeg
A pinch of salt
Flour to roll soft.

FRIED CAKES II (Less rich)

1 cup sugar
2 eggs
1 cup sour milk
1 teaspoon soda (level or scant according to sourness of milk)
Flavoring as in No. I.
Flour to roll as soft as can be handled

Shake in a large paper bag with a little sugar.—L. M.

Aunt Ada's Axioms: Some kitchens would be all right for a woman who wanted to reduce, but even at that most of them would prefer to do their ten miles a day in the open.

Pastry flour does make finer cake, but when none is at hand two tablespoons of corn starch well sifted in a cup of bread flour will give good results.

NASH

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

WE WERE picking up potatoes in the field.

"Without 'taters an' imitators this world would be a poor place to live in," said Mr. Hacket. "Some imitate the wise—thank God!—some the foolish—bad 'cess to the devil!"

As he spoke we heard a wonderful bird song in a tall spruce down by the brook.

"Do ye hear the silver bells in yon tower?" he asked.

As we listened a moment he whispered: "It's the song o' the Hermit Thrush. I wonder, now, whom he imitates. I think the first one o' them must 'a' come on Christmas night an' heard the angels sing an' remembered a little o' it so he could give it to his children an' keep it in the world."

I looked up into the man's face and liked him, and after that I looked forward to the time when I should know him and his home.

Shep was rubbing his neck fondly on the schoolmaster's boot.

"That dog couldn't think more o' me if I were a bone," he said as he went away.

It was a sunny day in late September on which Aunt Deel and Uncle Peabody took me and my little pine chest with all my treasures in it to the village where I was to go to school and live with the family of Mr. Michael Hacket, the schoolmaster. I was proud of the chest, now equipped with iron hinges and a hasp and staple. Aunt Deel had worked hard to get me ready, sitting late at her loom to weave cloth for my new suit, which a traveling tailor had fitted and made for me. I remember that the breeches were of tow and that they scratched my legs and made me very uncomfortable but I did not complain. My uncle used to say that nobody with tow breeches on him could ride a horse without being thrown—they pricked so.

The suit which I had grown into—"the Potsdam clothes," we called them often, but more often "the boughten clothes"—had been grown out of and left behind in a way of speaking. I had an extra good-looking pair of cowhide boots, as we all agreed, which John Wells, the cobbler, had made for me. True, I had my doubts about them, but we could afford no better.

When the chest was about full, I remember that my aunt brought something wrapped in a sheet of the St. Lawrence Republican and put it into my hands.

"There are two dozen cookies an' some dried meat," she said. "Ayes, I thought mebbe you'd like 'em—if you was hungry some time between meals. Wait a minute."

She went to her room and Uncle Peabody and I waited before we shut the hasp with a wooden peg driven into its staple.

Aunt Deel returned promptly with the Indian Book in her hands.

"There," said she, "you might as well have it—ayes!—you're old enough now. You'll enjoy readin' it sometimes in the evenin', mebbe—ayes! Please be awful careful of it, Bart, for it was a present from my mother to me—ayes it was!"

How tenderly she held and looked at the sacred heirloom so carefully stitched into its cover of faded linen. It was her sole legacy. Tears came to my eyes as I thought of her generosity—greater, far greater than that which has brought me gifts of silver and gold—altho my curiosity regarding the Indian Book had abated, largely, for I had taken many a sly peek at it. Therein I had read how Captain Baynes—my great grandfather—had been killed by the Indians.

I remember the sad excitement of that ride to the village and all the words of advice and counsel spoken by my aunt.

"Don't go out after dark," said she. "I'm 'fraid some o' them rowdies'll pitch on ye."

"If they do I guess they'll be kind o' surprised," said Uncle Peabody.

"I don't want him to fight."

"If it's nec'sary, I believe in fightin' tooth an' nail," my uncle maintained.

I remember looking in vain for Sally as we passed the Dunkelbergs'. I remember my growing loneliness as the day wore on and how Aunt Deel stood silently buttoning my coat with tears rolling down her cheeks while I leaned back upon the gate in front of the Hacket house, on Ashery Lane, trying to act like a man and rather ashamed of my poor success. It reminded me of standing in the half-bushel measure and trying in vain, as I had more than once, to shoulder the big bag of corn. Uncle Peabody stood surveying the sky in silence with his back toward us. He turned and nervously blew out his breath. His lips trembled a little as he said.

"I dunno but what it's goin' to rain."

America's Most Important Crop

AMERICA has but one staple product. We till the soil, we operate our industries, we develop transportation, we engage in commerce, we encourage the arts and sciences, but these are only means to an end. They are only carried on in order that America may produce men and women of our standards of citizenship.

We want to see them endowed with ability and character, with patriotism and religious devotion. We want to see them truly American, while ready and eager to contribute a generous share to the world welfare.

We want to see them honest, industrious and independent, possessed of all those virtues which arise from an adequate moral and intellectual training joined to experiences which come from the open country.—Calvin Coolidge.

I watched them as they walked to the tavern sheds, both looking down at the ground and going rather unsteadily. Oh, the look of that beloved pair as they walked away from me!—the look of their leaning heads! Their silence and the sound of their footsteps are, somehow, a part of the picture which has hung all these years in my memory.

SUDDENLY I saw a man reeling by in the middle of the road. His feet swung. They did not rise and reach forward and touch the ground according to the ancient habit of the human foot. They swung sideways and rose high and each crossed the line of his flight a little, as one might say, when it came to the ground, for the man's movements reminded me of the aimless flight of a sporting swallow. He zigzagged from one side of the street to the other. He caught my eye just in time and saved me from breaking down. I watched him until he swung around a corner. Only once before had I seen a man drunk and walking, altho I had seen certain of our neighbors riding home drunk—so drunk that I thought their horses were ashamed of them, being always steaming hot and in a great hurry.

Sally Dunkelberg and her mother came along and said they were glad I had come to school. I could not talk to them and seeing my trouble, they went on, Sally waving her hand to me as they turned the corner below. I felt ashamed of myself. Suddenly I heard the door open behind me and the voice of Mr. Hacket:

"Bart," he called, "I've a friend here who has something to say to you. Come in."

I turned and went into the house.

"Away with sadness—laddie buck!" he exclaimed as he took his violin from its case while I sat wiping my eyes. "Away with sadness! She often raps at my door, and while I try not to be rude, I always pretend to be very busy. Just a light word o' recognition by way o' common politeness! Then laugh, if ye can an' do it quickly, lad, an' she will pass on."

The last words were spoken in a whisper, with one hand on my breast.

He tuned the strings and played the Fisher's Hornpipe. What a romp of merry music filled the house! I had never heard the like and was soon smiling at him as he played. His bow and fingers flew in the wild frolic of the Devil's Dream. It led me out of my sadness into a world all new to me.

"Now, God bless your soul, boy!" he exclaimed, by and by, as he put down his instrument. "We shall have a good time together—that we will. Not a stroke o' work this day! Come, I have a guide here that will take us down to the land o' the fairies."

THEN with his miscroscope he showed me into a wonder world of littleness of which I had had no knowledge.

"The miscroscope is like the art o' the teacher," he said. "I've known a good teacher to take a brain no bigger than a fly's foot an' make it visible to the naked eye."

One of the children, of which there were four in the Hacket home, called us to supper. Mrs. Hacket, a stout woman with a red and kindly face, sat at one end of the table, and between them were the children—Mary, a pretty daughter of seventeen years; Maggie, a six-year-old; Ruth, a delicate girl of seven, and John, a noisy, red-faced boy of five. The chairs were of plain wood—like the kitchen chairs of today. In the middle of the table was an empty one—painted green. Before we sat down Mr. Hacket put his hand on the back of this chair and said:

"A merry heart to you, Michael Henry."

I wondered at the meaning of this, but dared not to ask. The oldest daughter acted as a kind of moderator with the others.

"Mary is the constable of this house, with power to arrest and hale into court for undue haste or rebellion or impoliteness," Mr. Hacket explained.

"I believe that Sally Dunkelberg is your friend," he said to me presently.

"Yes, sir," I answered.

"A fine slip of a girl that and a born scholar. I saw you look at her as the Persian looks at the rising sun."

I blushed and Mary and her mother and the boy John looked at me laughed.

"Puer pulcherrime!" Mr. Ha exclaimed with a kindly smile.

Uncle Peabody would have called a "stout snag." The schoolmaster hauled it out of his brain very de and chucked it down before me i kind of challenge.

"What does that mean?" I asked.

"You shall know in a week, my s he answered. "I shall put you into Latin class Wednesday morning, God help you to like it as well as like Sally."

AGAIN they laughed and again blushed.

"Hold up yer head, my brave la he went on. "Ye've a perfect ri to like Sally if ye've a heart to."

He sang a rollicking ballad of wh I remember only the refrain:

A lad in his teens will never b beans if he hasn't an eye for the g

It was a merry supper, and when ended Mr. Hacket rose and took green chair from the table, exclaiming:

"Michael Henry, God bless you!"

Then he kissed his wife and said:

"Maggie, you wild rose of E I've been all day in the study. I take a walk or I shall get an exal abdomen. One is badly beaten in race o' life when his abdomen ahead of his toes. Children, keep young friend happy here until I back, and mind you, don't forget good fellow in the green chair."

Mary helped her mother with dishes, while I sat with a book by fireside. Soon Mrs. Hacket and children came and sat down with

"Let's play backgammon," M proposed.

"I don't want to," said John.

"Don't forget Michael Henry," reminded.

"Who is Michael Henry?" I ask

"Sure, he's the boy that has n been born," said Mrs. Hacket. was to be the biggest and noblest o' them—kind an' helpful an' ch hearted an' beloved o' God above the others. We try to live up to hi

He seemed to me a very str and wonderful creature—this in ble occupant of the green chair.

I know now what I knew not th that Michael Henry was the spirit their home—an ideal of which empty green chair was a co reminder.

We played backgammon and Maid and Everlasting until Mr. Ha returned.

He sat down and read aloud the "Letters of an Englishwoman America."

"Do you want to know what sle ing is?" she wrote. "Set your out on the porch on a Christmas Put your feet in a pailful of pow ice. Have somebody jingle a bell one ear and blow into the other a bellows and you will have an e idea of it."

WHEN she told of a lady who been horned by a large in known as a snapdragon, he laug loudly and closed the book and s

"They have found a new peri American life. It is the gory b of the snapdragon. Added to genius for boastfulness and impi it is a crowning defect. Ye w think that our chief aim was the c pidor. Showers of expectoration thunder claps o' profanity and br gart gales o' Yankee dialect!—th the moral weather report that sends back to England. We h faults enough, God knows, but ve something else away beneath em an' none o' these writers has covered it."

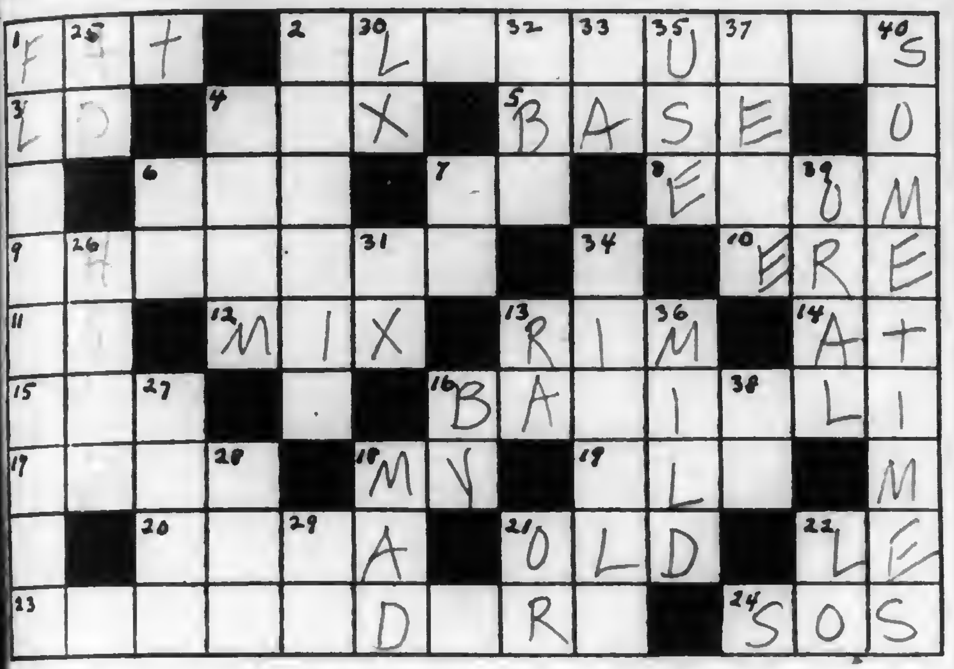
The sealed envelope which Mr. right had left at our home, a long e before that day, was in my ocket. At last the hour had come hen I could open it and read the essage of which I had thought much d with a growing interest.

I rose and said that I should like to o to my room. Mr. Hacket lighted candle and took me upstairs to a ttle room where my chest had been eposited. There were in the room bed, a chair, a portrait of Napoleon onaparte and a small table on which were a dictionary, a Bible and a number of school books.

"These were Mary's books," said Mr. Hacket. "I told yer uncle that ye could use them an' welcome. There's another book here which ye may study if ye think it worth the bother. It's a worn an' tiresome book, my lad, but I pray God ye may find no harm in it. Use it as often as ye will. It is the book o' my heart. Ye will find in it some kind o' answer to every query in the endless flight o' them that's coming on, an' may the good God help us to the truth."

(To be continued next week)

Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 8 (across) is E D O M, and 27 (down) is M E M O. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. Stout
2. What everyone likes to have (plural)
3. Behold
4. A receptacle, frequently of wood or steboard
5. Foundation
6. Used with neither
7. Someone I cannot see
8. A country in the south of Palestine
9. One who discharges a missile
10. Before
11. Preposition
12. To entangle
13. The outer edge
14. Near
15. A kind of tree
16. Microscopic vegetable organisms
17. A chain of rocks lying at or near the rface of the water
18. Belonging to me
19. The first name of the founder of a unirsity in Connecticut
20. An elevated table land
21. Aged
22. Of (French)
23. The ship of the desert
24. Telegraphic signal of distress

READING DOWN

1. Ill at ease, flurried
2. Gateway or entrance
4. To make a deep hollow sound, said of g guns and huge breakers
6. What one must be able to say at the ght time
7. What no man calls his wife, (abbreviaon)
13. Royal Academy, abbreviation
16. Alongside
18. Insane
21. Used with either
25. The ocean nearest us, abbreviation
26. What you must dig before you can have a well
27. A reminder, abbreviation
28. A gender, abbreviation
29. A point of the compass
30. A Roman "sixty"
31. And, (Latin)

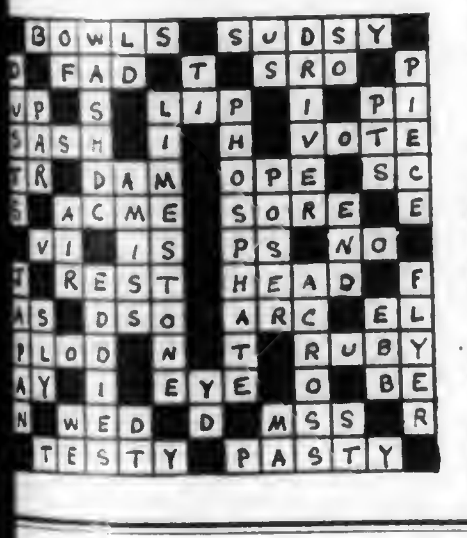
33. A continent separated from ours by the work of man, abbreviation
34. In a fitting or agreeable manner
35. What we must do with our talents
36. Gentle, not severe
37. Advice, counsel
38. The body of land in which Roosevelt is buried, abbreviation
39. Spoken or verbal
40. Occasionally but not always

AST WEEK'S PUZZLE ANSWER



He Didn't Smoke Often

"My husband has no bad habits whatever," boasted a wife. "He never drinks, and he spends all his evenings at home. Why, he doesn't even belong to a club."

"Does he smoke?" inquired a friend.

"Only in moderation. He likes a cigar after he has had a good dinner, but I don't suppose he smokes two cigars a month."—American Mutual.

Once a city man, out of work, had "hired out" to a farmer. At four o'clock in the morning the newly employed man was called to breakfast. A few minutes later the old farmer was astonished to see the man walking off down the road.

"Say! Come back and eat breakfast 'fore you go to work!" he yelled after him.

"I ain't goin' to work," the man called back. "I'm going to find a place where I can stay all night."—Prairie Farmer.

SuperZinc-ed TRADE MARK

WIRE FENCES

WHEN you build those long delayed fences this spring be sure to use the best fence fabric you can buy. It takes only the same amount of posts and labor, and will give many years more of satisfactory service.

Super-Zinced Fences are armored against rust by the heaviest coating of zinc that can be successfully applied to wire. We use a special formula of open hearth steel, and by our improved process the zinc is so closely bonded to the wire that it will not crack or peel.

We guarantee Super-Zinced Fences to be unexcelled in quality and durability. They include *Columbia Hinge-Joint* and *Pittsburgh Perfect Stiff-Stay Fences* in many styles for farm, poultry, garden and lawn. Super-Zinced Fences are an investment in good farming, adding greatly to the appearance, value and *profit* of your farm.

A catalog of complete information about these superior fences, and a handy farm account and memorandum book, are sent free upon request. Use the coupon or a postal card.

Michigan and New York fleeces: laine, unwashed, 67c; ½ blood, un 66@67c; ⅜-blood combing, 68@69c; blood, unwashed, 68c; fine unwashed, 58c; Wisconsin, Missouri and average England, half blood, 65@66c; ⅜ 68c; ¼ blood, 67@68c.

Butter and Cheese

THE New York butter market about steady at unch prices on Friday. Buyers still ating close to actual requirem and trading was only fair. dealers were free sellers but not fering concessions on top Medium and undergrades quiet in the buyers' favor. Trading on fancy storage, altho some holding for higher prices. Car ket quiet and about steady, dealers asking prices very irre and in most cases above buyers' of value.

The cheese market continued especially on daisies, which adv one-quarter cent. Trading was ly active in some quarters with lar outlets taking fair sized Most dealers were free sellers styles but outside buying had ently fulfilled wants for mome lower listings.

Market Summary

FRESH offerings of nearby and vegetables were mod on the Philadelphia market Fr morning. The demand and tr were rather slow. The market on commodities continues about ste altho a slightly stronger tend was evident for sweet potatoes. lot supplies of produce we.. li and trading was generally slow. lons were slightly weaker, selling @15c lower. Green beans, sp and carrots were also easier t

Potato Markets Irregular

The potato markets in Balt and New York were firm Fr Supplies were light and the de moderate. New York state whites ranged from $2.50@2.75 sack. The Philadelphia market dull and the volume of sales small. Pennsylvania round sold mostly at $2.60 per sack, similar stock in bulk brought @1.75 per hundred weight. was some fancy stock which br a higher price. The total ship for the country amounted to cars, of which number Pennsylv rolled 28, Maine 60 and New 135.

Egg Prices Advance

The egg market in New York day was firm with an advance about 1c per dozen. The egg m in Philadelphia also showed an vance; the market was firm and demand fair.—W. R. W.

Acreage Suggestions 19

POTATO growers are urged the United States Departmen Agriculture to make no further duction in potato acreage this in the special crop outlook report sued recently. The large crop of year was due to extraordinary per acre and not to excess acre and the department believes that acreage even slightly larger that of 1924 will be profitable growers.

During 1925 there probably be a sustained or slightly incre demand for such vegetables as tuce, celery, spinach and cucumb but little prospect for any incr in the demand for cabbage and lons and for such staple can crops as corn and tomatoes.

County News and Comment

CLARION COUNTY, PA.—We are truck with an old fashioned w'n- er, with about two feet of snow for he last four or five weeks, and the hermometer registering from twen- y to thirty-four below zero. Somo orn in the fields to be husked yet. Butchering not all done yet on ac- ount of the cows not fattening very vell. Dairy cows milking fairly well. Some farmers haul'ng lime for spring ise. Market prices: wheat, $1.70; ats, 70c; corn, $1.70; buckwheat, wt., $2; creamery butter, 50c; ountry, 35c; eggs, 50c; potatoes, bu., $1; veal calves, 14c; hogs, 14c; hickens, 18c.—C. R., Jan. 29.

CLEARFIELD COUNTY, PA.—Real winter weather has prevailed or a month, some local points re- porting as low as thirty degrees be- ow zero. A recent snow of more han a foot on top of the old one as rendered travel quite difficult. Rural mail delivery has been sus- pended on part of most routes. Farm roduce is moving at practically the ame prices as a month ago. Butter nd eggs move readily at 50@60c. Dressed poultry sells slowly and at rices lower than during the fall. —O. H. W., Feb. 2.

CRAWFORD COUNTY, PA.—The weather has been very cold. Snow is bout two feet deep on the level. Motor traffic about suspended except n a few state highways where the nowplow makes daily trips. There as been a number of cows sold to armers from distant places who end a purchasing agent here to buy car load. At a recent public farm uction grade Holsteins sold for $70 verage price. Butter, 45c; eggs, 48 50c; market milk, $2.24 cwt. for .6 test; potatoes, 50c; apples, $1; ats, 55c; buckwheat, $2.10 cwt.; hickens, live, 22c lb.; pork, 16c; eal, 14c, dressed.—O. W. G., Feb. 2.

ELK COUNTY, PA.—The last few ays have brought some little activ- y in the matter of pricing and buy- g fertilizer, seed and lime but that about all the evidence to be seen f any farm life at the present time. e have had plenty of snow for good leighing on the roads which are not raped. Prices: butter, 55c; eggs, 5c; potatoes still around $1; oats, 0c; hay about $25. Pomona Grange as purchased a movie outfit and the unty agent is showing Department Agriculture films with a few com- dy reels thrown in to live things up bit.—R. D. M., Feb. 2.

FULTON COUNTY, PA.—The past onth has been real old fashioned inter—cold, and ground covered ith snow. Plenty of ice of excellent uality on the streams; however, ery few farmers put up ice. Farm- s busy getting wood and doing hores; very little else can be done wing to the cold and snow. Cattle intering well. Considerable com- laint among poultrymen at the low roduction of eggs. The farm census ker has been calling on the farm- . This is slow work as many of e farmers have no system of book- eeping. Prices: hay, $15; wheat, 2; corn, $2 bbl.; chickens, 20c; ggs, 50c; butter, 35c. A large num- r of sales already listed in county apers.—T. H. T., Jan. 24.

LEBANON COUNTY, PA.—Real inter weather the past month. On anuary 29 a heavy snow fell ac- mpanied by strong winds, with nsiderable drifting as the result. raffic practically tied up for several ys and some roads are not open yet travel. Many farm stock sales e taking place. Fair price realiz- d for stock and implements offered. e hope the covering of snow will e very beneficial to wheat and grass. heat, $2; corn, $1.35; oats, 70c; y, $20; straw, $12@14 ton; milk, 2.25 cwt.; butter, 50c; eggs, 60c; pples, $1.50@2 bu.—P. L. M., eb. 2.

MONMOUTH COUNTY, N. J.— ow and then more snow. Since anuary 2 only in spots has the bare ound been visible. The high feed ices, together with poultry dis- ses, has discouraged some poultry-men. Eggs range around 60@65c per dozen wholesale. Plant growers busy getting ready their cold frames and hot beds. Signs point to a very material increase in vegetable production, especially such crops as sweet corn. Bankers of the county very much interested in assisting agricultural improvement. About two weeks ago at a county meeting they approved distributing a supply of farm account books.—E. D., Feb. 2.

MONROE COUNTY, PA.—During January the stone quarry near Analomink was again opened up. Many years ago it was a paying industry. The bootleggers paid $12,400 to this county in fines the past year. Eugene Buskirk, sixty-five years of age, has just completed twenty years of service for Uncle Sam, being one of the original R. F .D. men. He has traveled twenty-five miles per day. The town folks are taking two nights per week coasting on the hills. The eclipse was complete in this county, stars were seen and the sky was quite dark. Not much change in prices: corn, $1.50; wheat, $1.60; rye, $1.25; oats, 70c; potatoes, 85c; beef by quarter, 10@12c; pork, 16c; veal, 12c; apples, $1.25; poultry, 25c; turkeys, 65c; hay, $23.—G. E. S., January 31.

MONTGOMERY COUNTY, PA.—Many old-timers claim it is the severest winter for a score of years. About eighteen inches of snow on the level. Plans are being formulated for local farmers' institutes to be held thruout the county. Living and production costs are mounting higher while farm products are on the decline. Work is scarce in the towns, Prices, retail: eggs, 68c; butter, 55@60c; chickens, 28c; bran, $2.15; gluten, $2.40; oil meal, $2.80; oats, 75c; hogs, wholesale, 16c; calves, 12c; wheat, $2.—C. N. D., Jan. 29.

POTTER COUNTY, PA.—Temperature at times is nearly forty above zero and within forty-eight hours falls to several degrees below zero. Has been reported as being thirty to thirty-two degrees below in some places but twenty-two was registered in most instances. With an eighteen-inch snowfall it gave the impression that this is an old fashioned winter. The eclipse of the sun was ninety-eight per cent total here.—dark enough so the stars were visible. Farmers have been storing a harvest of sixteen-inch ice. Potato prices show a slight advance. Buckwheat, $2.25 cwt.; butter, 50c; eggs, 45@50c.—M. C. S., Feb. 2.

SNYDER COUNTY, PA.—Severe winter weather, heavy snows twenty to thirty inches on ground; roads almost blocked everywhere. Temperature as low as thirty-five degrees below. Ice harvesting going on. Stock wintering well. Farmers busy attending sales. Farm Bureau meetings, etc. Lots of sickness, mumps, measles, scarlet fever and pneumonia. Markets: wheat, $1.75; corn, $1.25; oats, 50c; rye, $1; butter, 38c; eggs, 48c; chickens, 18c.—S. D. D., Feb. 2.

SOMERSET COUNTY, PA.—Real winter and lots of zero weather with enough snow for sledding. Not much sickness this winter. Some farmers must buy grain on account of the early frost last fall. Some seed corn held over from 1923 crop. Eggs on the decline, down to 50c. Prices: oats, 60c; potatoes, 60c; wheat, $1.75; hogs, 13½c; butter, 50c; poultry, 22c; lard, 21c; 43 per cent cottonseed meal, $53.—P.W.K., Jan. 29.

SULLIVAN COUNTY, PA.—This county has sure had her share of drifts thus far; we have fifteen inches and it is still snowing. The apple supply nearly exhausted. Buckwheat and oats selling rapidly. Hay still plentiful. Epidemics of colds and grippe are common; pink-eye and three-day measles have lately made their appearance. Some prices: butter, 40c; eggs, 50c; potatoes, 75c; oats, 75c; hay, $16; buckwheat, $1.10; wheat, $1.80; lard, 25c.—M. G., Feb. 1.

The Farmer's Wife Knows
that trying to make a poorly equipped farm pay is a losing battle. What she may not know is this—that by borrowing money through
"The Mortgage That Pays Itself Off"
the farm can be put promptly on a profitable basis, with new equipment and improvements. There will be no burden paying it off. Easy semi-annual payments for 33 years and the farm is clear. Straight 6% interest plus 1% reduction of principal each year.

GOOD FARMING PAYS
THE SPROCKET PACKER
13 SIZES 1 AND 3 SECTIONS
Every farmer wants to save labor, time, horsepower, seed and raise bigger, better and surer crops. The WESTERN Pulverizer, Packer & Mulcher (3 machines in 1) will do all this. It pulverizes and packs as deep as plowed and forms a loose, granular, moisture-retaining mulch on top—making a perfect seedbed—in one operation. It makes 5 to 10 bushels more per acre by rolling winter wheat or other growing grain in spring, whether ground is hard-crusted and cracked, heaved, loose or unpacked. The WESTERN has no equal for this work, or for making seedbed for wheat, corn, alfalfa or any other crops; or for covering alfalfa, clover and grass seed.
GET OUR FREE CATALOG AND BOOK ON SEEDBEDS It shows the machine and its work by photos taken in the fields—Explains its principle and construction; why it does better work with less horse-power and saves one-third seed; why it is the only roller that leaves a mulch on top of the packed soil. It contains letters from many users, proving our statements; and much other valuable information. "Worth its Weight in Gold." Write TODAY for Catalog and delivered price from nearest shipping point.

DAIRYMEN ELECT

New Officers Chosen for N. J. Cattle Clubs

THREE hundred breeders and dairymen of New Jersey attended breed association meetings held at Trenton on January 15 in connection with the annual Farmers' Week. In the morning the dairymen met jointly with the alfalfa association to listen to a discussion on the most approved methods of growing this important dairy crop under New Jersey conditions.

Following a joint luncheon at the Stacy-Trent Hotel, the Guernsey, Holstein, Jersey and Ayrshire breeders held their respective annual meetings to elect officers and adopt programs of work for 1925.

The Guernsey association elected the following officers: President, R. L. Benson; vice president, R. V. Lindabury; secretary-treasurer, W. T. White, of Princeton. Executive committee: Mrs. F. K. Stevens, Jos. L. Hope, Jas. E. Russell, C. D. Cleveland, E. T. Gill, Elmer Niece and Albert Forsythe.

Guernsey Breeders Incorporate

As in the past years twelve silver cups in the form of miniature Guernsey milk cans were awarded to the herdsmen who made the best records in the respective classes in 1924. The breeders present voted to incorporate under the name, New Jersey Guernsey Breeders' Association, Inc. Its membership now numbers 250. Fifty of these are junior members in calf clubs.

In the afternoon Mr. D. L. James, of the U. S. Department of Agriculture, spoke on "Co-operative Bottling and Distributing Plants," and Mr. R. L. Benson read a paper entitled, "Contagious Abortion and Its Treatment." Mr. William Nulton, Jr., the field secretary for New Jersey, read his annual report, which reflected a growing interest in well-bred Guernseys. Mr. Lyman Hornor, a member, carried off first honors in the milk contest with his sample which scored 98.5. There were twelve other Guernsey samples that averaged 94.8.

Holstein Men Optimistic

The Holstein association elected the following officers: President, G. D. Brill; vice president, H. A. Davidson; secretary, P. P. Van Nuys, of Belle Mead; treasurer, T. H. Mettler. Executive committee: Samuel Ridgeway, J. M. Nevius, Henry Schmidt, A. S. Danks, M. H. Keeney, A. R. Jackson, Frank Vandruff and John Tine.

Three speakers addressed the Holstein breeders' meeting.—Professor H. H. Wing, E. R. Eastman and A. W. Carpenter. At the business session it was voted to suspend field work in New Jersey for the present. Mr. Fred Koenig, Director of the Extension Service of the National Holstein Association, explained the method by which New Jersey breeders could avail themselves of the assistance of the national association in carrying out an educational program. A feeling of optimism prevailed among the breeders regarding the present trend of the industry in the East and the present demand and prices for good Holsteins.

Jersey and Ayrshire Officers

The Jersey breeders of New Jersey had as their guest, Mr. W. C. Randolph, of the American Jersey Cattle Club. The officers for 1924 were reelected. They are: President, Henry Young; vice president, P. H. B. Frelinghuysen; secretary-treasurer, J. M. Belcher, of Far Hills. Executive committee; W. R. Spann, Chas. Hires, Fred Huyler, C. L. Hamilton, Chas. Doscher and Reginald Halliday.

At the annual meeting of the New

(Continued on page 38)

Smoke House
LOWEST priced practical Portable Smokehouse built. Can be used either in or out of doors. Thousands in use. Made in 3 and 5 hog sizes. Smoke thoroughly cooled before reaching meat chamber—gives extra fine flavor. Absolutely fire-proof; wonderfully fine storage place after meat is smoked.
VALUABLE BOOKLET given with every Smokehouse. Tells how to double hog profits by selling home cured pork—also gives prize winning recipes for curing meat.
Write for descriptive folder and prices—we can save you money.
EMPIRE MFG. COMPANY
220 N. 7th St. Washington, Iowa

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

NASAL GLEET.—I have a mare ten or twelve years old. She has a thick white discharge, which affects her every week or two. I use her for driving and it is very disagreeable to see. Will you kindly advise me how to treat her?—W. S., Saltsburg, Pa. If the discharge is nasal, it may be the result of ulceration of the upper grinder teeth, or nasal catarrh. Examine the mouth; if you find the upper fourth molar tooth diseased, have your veterinarian extract it, then she will recover. Give her one dram of powdered sulphate of iron and two drams powdered gentian at dose in ground feed three times a day. If the discharge is vaginal, flush her with lysol solution, one part lysol to one hundred parts tepid water; also give her above mentioned medicine.

ABSCESS.—I have a horse eleven years old that for the past two years has had a gathering, or abscess, in his head. He tires easily, at times seems to have blind staggers; part of time there is some nasal discharge. He coughs some and breathes much like a wind broken horse. It bothers him to eat grain or drink water, but he seems to keep in good condition. Have taken Pennsylvania Farmer for four years and like it very much. there are many helpful things in it, and good stories.—A. O., Osceola, Pa. Examine the mouth and you will perhaps find a diseased tooth which has been causing most of the past trouble. If you notice any bulging of the bones of face, your veterinarian can remove a circular section of bone; then you can drain abscess and he will recover. If the bone is diseased a bad odor can be readily detected.

DISEASED MOLAR TOOTH.—I have a horse about fourteen years old that has catarrh affecting one side of head. He gives off an offensive odor and we should like to have him cured.—J. W. S., Hampstead, Md. When a horse has nasal discharge coming from one nostril and continues for any great length of time you will usually find it caused by a diseased upper grinder tooth. After the tooth is extracted the animal usually recovers, unless the bones of head are diseased; then recovery is doubtful. Have your veterinarian pull the tooth.

TUMOR.—I have a pig that has a bunch on the belly between hind legs. This bunch is large, was very hard and bleeds some. It seems to be fastened to the belly. Can the animal be cured?—A. B., Germansville, Pa. This bunch, being hard, leads me to believe it is not hernial; therefore, it can be safely cut off. Following the removal of such a bunch you will find some hemorrhage. Either tie the bloodvessel, or burn off bunch with knife-shaped red-hot iron. This method usually prevents much loss of blood. Apply equal parts oxide of zinc and boric acid to wound daily. Such bunches usually grow rapidly, therefore you should treat the case at once.

To Hold Berkshire Sale

LARGELY because of the success of the Berkshire State Sale held at Harrisburg during the Farm Products Show, the Berkshire Breeders' Association of Berks County have decided to hold a sale on March 14, according to C. S. Adams.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. **Minimum, ten words.**

TOBACCO—Select Chewing 3 lbs. $1.00. [illegible] smoking 5 lbs. $1.00. C. Scott, S202, Sedalia, Ky.

Size, Soundness and
Weight of Ears
Measure Your Yield of Corn

Your real test of yield is the number of bushels of sound, dry, marketable Corn you grow per acre.

How your Corn starts off in the spring, how it develops and matures, depends on the plant food in the soil.

V-C Fertilizers will make your Corn grow more rapidly, and produce large, heavy ears that ripen before frost.

Early matured Corn means sound ears of greater feeding value, and less shrinkage.

V-C Fertilizers represent the best that the science of chemistry and agricultural practice know about the subject of plant food.

Ask your local dealer for V-C Fertilizers or write

Jersey Dairymen Elect

(Continued from page 36)

Jersey Ayrshire Breeders' Association the following officers were elected: President, George A. Hill; vice president, W. P. Probasco; secretary-treasurer, W. H. Eberling, Dover.

Mr. J. G. Watson, ex secretary of the Ayrshire Breeders' Association of America and now associate editor of the New England Homestead, spoke to the Ayrshire men on the subject "The Future of the Ayrshire."

The Get-together Banquet

One hundred and twenty breeders and dairymen sat down together at the annual get-together banquet at Hildebrecht's in the evening. E. J. Perry, chairman of the banquet committee, introduced as toastmaster, Professor A. M. Hulbert, Assistant Director of Agricultural Extension. Thruout the evening good natured rivalry manifested itself in the sallies of the different speakers when extolling virtues of their favorite breed.

The speakers representing the several breeds were: J. G. Watson, Ayrshire; W. C. Randolph, Jersey; George Stone, Guernsey, and Allen Crissey, Holstein.

Other speakers who discussed the problems of the industry as a whole were H. J. Baker, Director of Agricultural Extension; E. R. Eastman, and A. W. Carpenter. The various talks dealt with the factors in economical production, the necessity for high quality products, the importance of breed associations, the wider use of milk, co-operative marketing and advertising.

Lost the Entire Litter

I had a brood sow to farrow two weeks before time and pigs were all dead, twenty-two in all. I was feeding dairy cow feed, corn ears, ensilage and horse meat. Also, some half-frozen potatoes.—C. F. C. Farmer.

It is little wonder that the pigs were all dead. The inquirer is lucky to have the sow still living. It is very important that a sow be fed properly, but sparingly, previous to farrowing. In this case the trouble may have been caused by one or all of several things. In the first place she was probably over-fed as to quantity. In the second place she received too much protein, and thirdly the half-frozen potatoes were bad for her.

Careful watch of the condition of the sow should be kept from the time she is bred. The amount of feed should be only such as will keep her in good condition, yet not fat. The ration should contain enough protein to maintain her strength and to build the frame of the pigs. Some corn, either shelled or on the ear, is always in place. To this should be added a mixture containing bran, middlings and tankage. This may be fed either as a slop or dry in a self-feeder. Plenty of water should be supplied at all times. She should have plenty of room to exercise. The amount of feed should be reduced gradually two or three weeks before farrowing, but clover or alfalfa hay should be added.

"Yes, sir," said the barber, "my poor brother, Jim, has been sent to an asylum. He got to broodin' over the hard times, and it finally drove him crazy. He and I both worked side by side, and we both brooded a great deal. No money in this business, you know. Prices too low. Unless a customer has a shampoo, it doesn't pay to shave or hair-cut. I caught Jim trying to cut a chap's throat because he declined a shampoo, so I had to have the poor fellow locked up. Makes me sad. Sometimes I feel sorry I didn't let him slash. It would have been our revenge. Shampoo, sir?"

UNCLE SAM'S FARM

The U.S.D.A. Studies Many Livestock Problems at Beltsville, Maryland

THE many farmers who have visited the experimental farm operated by the United States Department of Agriculture at Beltsville, Maryland, have had an opportunity to observe some of the many experiments being conducted on this government farm. The number of studies being made of problems related to the dairy and livestock industries is quite surprising.

In a review of the farm's activities for the last fiscal year, Dr. John R. Mohler, Chief of the Bureau of Animal Industry, outlines some of the major experiments conducted there. They include:

Studies of animal nutrition in the specially constructed nutrition laboratory recently built to study the influence of feeds on animal growth and reproduction.

Studies of animal genetics, which have included observations on more than 30,000 guinea pigs. Inbreeding, transmission of coat colors, sterility and factors causing abnormalities have received special attention.

Studies in Pork Production

Meat studies conducted at the experimental abattoir located on the farm. This work related largely to the soft-pork problem, methods of curing meats and their effects on nutritive value and palatability of meats.

Feeding and breeding experiments with swine, including detailed slaughter records.

Experiments on the effects of lice and worms on the development of hogs from birth to maturity.

Experiments to determine the minimum age at which pigs can be successfully and permanently immunized against hog cholera.

Development of a practical system of forage-crop pastures for sheep and lambs.

Studies of the effects of "flushing" (extra feed at lambing time) on sheep breeding and lamb yields.

Studies of growth of sheep by systematic weighing of all growing stock.

Experiments on wool growth and studies on the identification of animal fibers. The farm has a well-equipped wool laboratory.

Investigations with milk goats. The grading up of common American does with purebred bucks of heavy milking strains has been carried to the fifth generation.

Poultry and Dairy Experiments

Extensive poultry investigations, including the hatching of 7500 chicks with good results. Inheritance of egg production, vitamins in rations fed laying hens, comparative value of animal and vegetable proteins in feed and value of feeding milk to growing chickens received special attention.

Effects of feed on the flavor and odor of milk from dairy cows. These experiments included studies with cabbage, potatoes, garlic and green rye.

Tests in the sterilization and cleaning of milking machines by various methods.

Studies of grain mixtures in comparison with alfalfa hay for dairy cows, including best methods of determining nutritive values.

Comparison of feeding hay once and twice a day to dairy cows.

Relative value of milking dairy cows twice and three times a day in the effect on diminution of milk yield during lactation period.

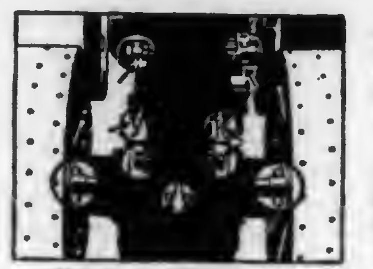
Dairy cattle breeding experiments, including measurements and weights of organs and detailed studies of udder development.

The experimental farm is reached most conveniently by automobile, but is also accessible from Washington by train or electric interurban car, the distance being about fourteen miles. Visitors are welcome. T. E. Woodward is the resident manager of the dairy farm and B. F. Brandon of the animal husbandry farm.

More power for actual work

No friction to steal away your power
in this smooth-running ball-bearing transmission

In the Light-Weight OilPull, Rumely engineers have achieved another distinct triumph in tractor engineering. Power loss in bearings and gears has been reduced to practically nothing. Friction, the power thief—the cause of rapid deterioration—of breakdowns—of lost time—of heavy repair expense and many other ills—has been shackled.



Ball-Bearing Transmission

This has been done, first, by means of a Ball Bearing Transmission. All shafts in the transmission of this OilPull Tractor are mounted upon smooth-running, annular ball bearings. The rear axle is likewise ball-bearing mounted. Each bearing is housed individually and packed in grease. Second, every gear inside the transmission is machine cut, with case-hardened teeth. And the complete transmission is enclosed in a dust-proof case and operates in a bath of oil.

Frictionless construction is only one feature of the Light-Weight OilPull which assures more power for plowing, discing, cultipacking and many other drawbar and belt jobs—at less cost.

Mail Coupon for Catalog

In this Light-Weight Oil-Pull, Triple Heat Control, Oil Cooling, Dual Lubrication and all the famous OilPull principles of construction have been retained. It is still the famous OilPull with many improvements and refinements. The design is small, light, compact, easy to handle and maneuver.

Mail the coupon. Get the complete catalog which completely describes Light-Weight OilPull tractors. Address Dept. A.Y.

Don't neglect a Cold

Dangerous sickness often starts with a cold. Ward off your colds with Musterole before pneumonia starts.

Musterole is a clean, white ointment made with oil of mustard. It has all the healing properties of the old-fashioned mustard plaster but none of the unpleasant features.

Musterole is not messy to apply and does not blister.

At the first sneeze or sniffle take the little white jar of Musterole from the bathroom shelf and rub the ointment gently over the congested spot.

With a tingling warmth it penetrates the skin and goes right down to the seat of the trouble.

Rheumatism, tonsillitis, lumbago, coughs and colds are all symptoms that call for Musterole.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

35c and 65c jars and tubes; hospital size, $3.

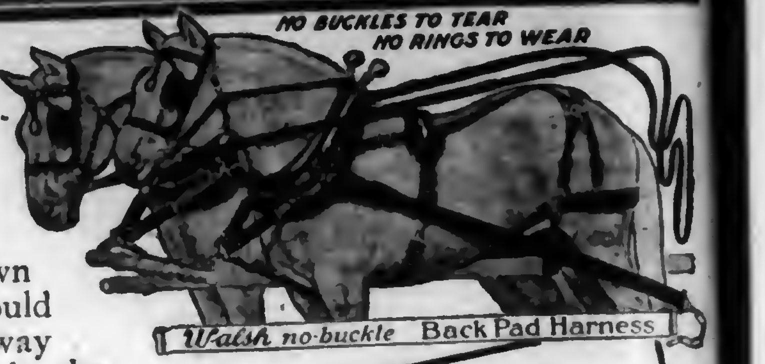
The 1925 Walsh Leads Again

Making Pulling Records With A Walsh No-Buckle Harness

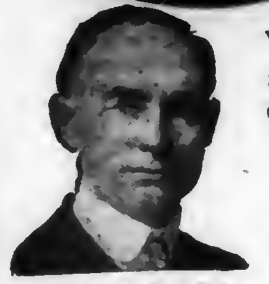
An Exciting Moment at Iowa State Fair Pulling Contest

The famous team of Mr. Lew Cole, of Iowa, that has won so many pulling contests. Notice they wear a Walsh No-Buckle Harness. The Dynamometer Car shown in picture tells exact pulling power of any team.



$5 DOWN After 30 Days Free Trial

Send No Money—No promise, not a penny down is required until you try a Walsh No-Buckle Harness 30 days on your own team. If it was not an extra good harness I could not make such a wide-open offer as this. My way of making harness without buckles or rings, has made Walsh the harness sensation of America. If it doesn't sell itself to you after 30 days' trial, don't keep it—just slip it in the box and return it at my expense. Mail the coupon for my big, new, free book that tells all about this remarkable No-Buckle Harness and explains fully my liberal offer.



JAMES M. WALSH
President

Costs Less—Lasts Longer

In nine years, I have built up the biggest harness business in the world by selling a better and stronger harness—a harness without buckles or rings—a harness that lasts so much longer than ordinary harness that it is far more economical to buy. Thousands of farmers in every state now own Walsh Harness. Some who bought one set to start with, bought three to six more for other horses since. To my knowledge, a Walsh Harness has never yet worn out.

12 Walsh Advantages

1. No buckles to tear straps—no buckle holes to weaken them.
2. No rings or dees to wear the straps in two.
3. Walsh Harness can be easily and quickly adjusted to fit any size work horse or mule.
4. Only harness in the world using tested leather.
5. Three times stronger than buckle harness.
6. All hardware is double zinc-galvanized before being enameled to prevent rust. Irish Linen Thread used in stitching
7. Tremendous repeat business proves the merit of Walsh No-Buckle Harness.
8. Lowest repair cost in the world.
9. Walsh Harness costs no more than the ordinary buckle harness.
10. Tens of thousands of team owners have tried and proven the merits of Walsh Harness.
11. Strongest and most liberal guarantee ever placed upon a harness.
12. 30-Days Free Trial gives you an opportunity to try out Walsh Harness.

World's Strongest Harness

Three Times Stronger Than Buckle Harness. Buckles weaken and tear straps. As an example, a Walsh 1⅛-inch breeching strap holds over 1100 lbs. by actual test in steel testing machine. The same strap with the buckle will break at the buckle at about 360 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles—easy to see why Walsh is three times stronger than ordinary harness. The Walsh special steel test is the most rigid leather inspection test known in the harness industry. Only the back, the choicest part of each hide is used in Walsh Harness. It is selected Northern Steer Hide, bark tanned by a special six-months process, explained in my free book.

See How Rings Wear End Of Strap
The Walsh has no buckles nor rings

Friction Destroys Harness

Rings are another thing that make harness wear out before it should. Examine your old harness and you'll find where rings have worn the straps. There are 270 places on an ordinary buckle harness where ring friction wears the straps in two. Walsh Harness has no rings. Many other advantages are explained in the big FREE Book. Write for it today.

My 1925 FREE HARNESS BOOK — Your Copy Is Ready

Some of the Interesting Topics In My Free Book

1. How a broken strap led to the invention of harness without buckles.
2. Why does buckle harness need patching so often and wear out so quickly?
3. Friction is destroying every old style harness in use.
4. The Walsh is three times stronger than buckle harness
5. Walsh strap holder—the harder the pull, the tighter it holds.
6. Only 9c a year average repair cost
7. The world's greatest advance in harness making.
8. How Walsh leather is tested in steel testing machine.
9. 50 pictures of Walsh users in every state and on leading University Farms.
10. The Walsh 3-Year Guarantee
11. Pictures and descriptions of 10 styles of Walsh Harness.

Adjustable to Fit Any Horse Perfectly

In ten minutes, you can adjust a Walsh to fit any horse or mule like a glove. It's a comfortable harness, a handy harness, a handsome harness, and it stays that way. Get the free book, select any one of the ten styles; try it 30 days—not merely examine it. Put it on your team. Give it a good hard work out.

Over 30,000 Users Praise It

Government Experiment Stations and Agricultural Colleges are among the thousands of users in every state who praise the Walsh Harness. A team with Walsh Harness took first prize at Wisconsin State Fair.

"I have been very much pleased with the harness bought from you last spring. I am enclosing an order for another set."
—Benj. F. Bausum, Annapolis, Md.

"I am sending for another harness. We sure like the one we bought from you. I would like to try your collars. One of our neighbors is using one."—
Jacob Stuffle, Exeland, Wis.

"I am sending an order for another set of your harness. I bought a set from you a year ago and am well pleased with it. I intend to use nothing but Walsh from now on."
C. H. Stamm, R. F. D. No. 2, Millimont, Pa.

$5 After 30 Days' FREE Trial

After you have satisfied yourself that the Walsh is the best harness ever made, send me $5.00. Balance in easy monthly installments. Otherwise return it to me at my expense and you will not be obligated in the least. Pay cash if you wish. My guarantee protects you.

Write TODAY for my big free 1925 book. Simply fill out and mail coupon or postcard. The book explains everything, including my user cooperative agent plan whereby you can earn money showing Walsh Harness to your neighbors.

BROWN
[11]

YOU can SAVE a lot of Money this Year if you will send for my new big CUT PRICE CATALOG. Don't buy a rod of fence, barb wire, gates, posts, roofing and paint until you get this money-saving book. I'VE CUT PRICES to the bone on my 150 styles of DOUBLE GALVANIZED Farm, Poultry and Lawn Fences — Farm, Drive and Walk Gates; on Corner Posts, Steel Fence Posts, and Gate Posts—Barb Wire, Smooth Wire, Grape Wire—Roofing and Paints. Catalog shows a bigger variety than you'll find in a dozen stores and at prices that save you fully one-third or more. Send for this catalog today — compare my quality and NEW CUT PRICES with what you have to pay elsewhere. You'll SAVE big MONEY.

Jim Brown PAYS the Freight

The new low prices in my catalog are *delivered* prices. I pay the freight right to your freight station. You know when you look in my catalog exactly what your goods are going to cost laid down at your freight station. You've no extras to pay. You'll find a big difference in price and a tremendous difference in ***quality*** — for instance — my fence is made of Basic Open Hearth Steel Wire and all ***double galvanized*** by the famous Brown process which puts on twice the usual amount of galvanizing. That's why it don't rust out—why it lasts two or three times longer than ordinary fence. My Gates have Carbon Steel one piece frames—last a lifetime. My Steel Posts are bigger, heavier and much stronger; my Barb Wire and Smooth Wire is the best ever; my Roofing is ***asphalt*** Roofing with ***wool felt*** base—not coal tar and paper; my ***WEARBEST paint*** with its big percentage of Pure White Lead and Pure Linseed Oil is all that its name implies. Just read these letters:

"The 140 rods of fence you shipped me seven years ago is as nice and bright today, with no sign of rust on it. I put up another make of fence about the same time I did yours, and it is very nearly ruined by rust. The Brown Fence is by far the best fence put up in this locality." John Bruce, Cauthron, Ark.

"I received my roofing in good condition. I feel that I saved at least $1.00 on each roll by ordering from you and if I ever need any more roofing I sure will send you my order for I know I would get the worth of my money. I certainly will recommend your roofing to all my friends." A. B. Ingram, Eton, Ga.

"Yours is the heaviest paint I have ever used. It covers better and it goes farther. And my neighbors say it is the whitest paint they ever saw. You saved me $1.30 a gallon." Harry Thomas, Athenia, N. J.

State's Forestry Program Is Sound

The Development of Pennsylvania's Forests Is Proving To Be Good Business

By Fred Brenckman, Secretary
The Pennsylvania State Grange

PENNSYLVANIA FARMER, in its issue of January 3, contained a communication signed by "A Woodlot Owner," setting forth that he had heard three of the officials of the Pennsylvania State Grange, during the past nine months, advocating the proposed $25,000,000 bond issue for forestry purposes.

The writer in question expressed his doubts regarding the wisdom of bonding the state for this "scheme," urging the editor of the paper to get and give the facts regarding it.

In view of this, it may be in order to give some of the reasons which impel the Pennsylvania State Grange to favor the proposed bond issue.

It is not so very many years ago since those who were interested in forestry were looked upon as faddists. But the attitude of great masses of the people with reference to this subject has undergone a distinct change during recent years. It is fortunate, indeed, that this is so, for one of the most menacing clouds on our national horizon is that which warns us of an approaching timber famine.

An Annual Freight Bill of $25,000,000

Most of the virgin timber of the United States is now confined to the Pacific Coast. At the present rate of consumption this will all disappear within about twenty-five years. Long before the point of complete exhaustion is reached, famine prices for lumber will prevail. Even now, the freight bill on the lumber which is brought into the state amounts to about $25,000,000 a year. This is exactly the amount of the proposed bond issue

No argument is needed to prove that we cannot do without timber. When our own supply is gone, from what source shall our needs be filled? The fact is that if we want to continue to use lumber, we will have to produce it here at home. The sooner the people wake up to this important truth, the better it will be for us.

Fortunately, a large part of the territory of Pennsylvania is well suited to the production of timber. There are millions of acres within our borders which, under present conditions, are unfit for any other purpose than the growing of trees.

We Could Easily Grow Our Own

The so-called forest area of this state is greater than the combined forest areas of Italy and Greece; more than ten times as large as that of Belgium, and larger than one-half of the total forest area of France and Great Britain. Farm woodlots contain 4,043,902 acres; state forests, 1,131,000 acres, and all other forest lands combined, 7,811,654 acres.

These figures are interesting chiefly because they indicate the acreage that is available in the state for the growing of trees. It is somewhat misleading to refer to some of these areas as forest land. On millions of acres the forests are conspicuous by their absence. These lands once supported great forests of pine and hemlock, but destructive methods of lumbering and the ravages of fire have made them only a memory.

It has well been said that, with all these millions of acres that are well adapted to the growing of timber, Pennsylvania, under proper conditions, should find no more need of importing lumber than Iowa has for importing corn, or than Kansas has for importing wheat. Nevertheless, eighty-four per cent of the timber consumed in the state is brought in from the outside, and it is claimed by those who are in a position to know that our forests are producing only ten per cent of their capacity. Here is another case of "Acres of Diamonds," to quote the title of Russell Conwell's famous lecture on neglected possibilities and opportunities.

The advocates of the proposed bond issue are strongly of the opinion that the best way of meeting the situation confronting us is to enable the state to secure title to the lands that are now lying waste and unproductive, and give them fire protection.

To depend on appropriations from current revenues, as experience has shown, is simply to trifle with a problem that is desperately serious. One of the most important factors entering into the case is the element of time. Theodore Roosevelt was fond of saying that nine-tenth of wisdom lies in being wise in time. It takes a long time to grow trees with a marketable value, and the right time for Pennsylvania to begin in real earnest is the present.

Increase in Value Rapidly

It has taken many years for us to acquire the 1,131,000 acres comprising our present state forests. This land was purchased at the average price of $2.26 per acre. Its present value is conservatively placed at $11.80 per acre. The state forests are now worth more than $13,000,000 and since their purchase have made a net gain of more than $5,000,000 over all expenditures for administration, development and improvement. During 1923 the income from the state forests amounted to more than $113,000.

The "Woodlot Owner" referred to in the opening paragraphs complains that state forests are exempted from taxation, and he wants to know who is to pay into the treasury, under state

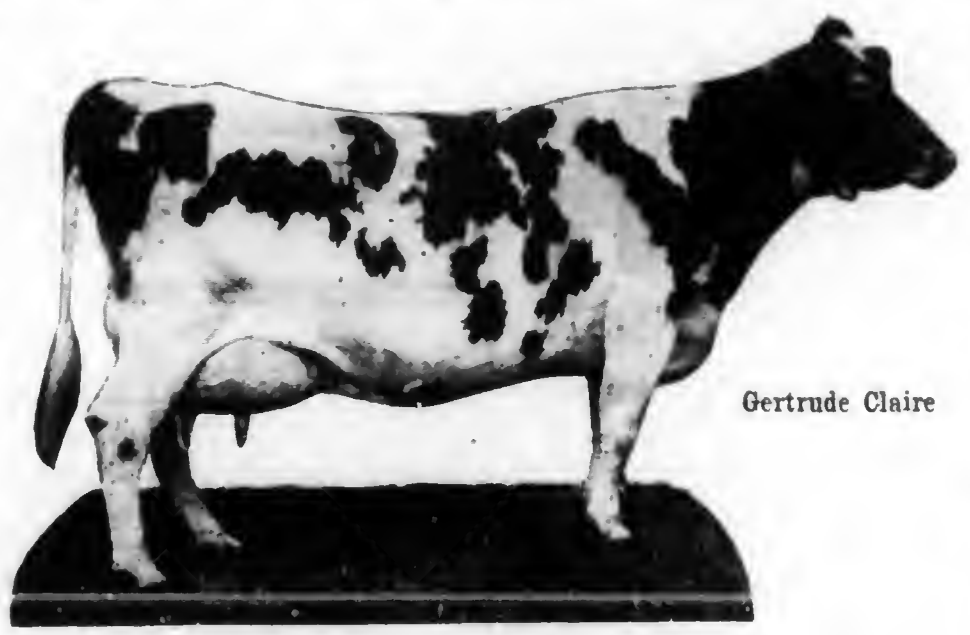
Gertrude Claire's New World Record

This Cow's First Calf Sold for Five Dollars—a Thousand Won't Buy Her Last



Gertrude Claire

GERTRUDE CLAIRE 99550, owned by F. R. Hartzell, Butler County, Pennsylvania, now holds the world's record in milk production for a Guernsey cow in Class C and ranks second in the production of butterfat, missing the world's fat record in her class by less than eight pounds. Her two records of 18,942.5 pounds of milk and 893.41 pounds of butterfat rank, respectively, fourteenth and eighteenth for the breed, all ages considered. Her average test for the year was 4.72 per cent.

No Box Stall for Her

Gertrude Claire made this record under ordinary farm conditions, standing in a stanchion along with the rest of the herd. She was fed clover hay and corn silage and one pound of grain for each three pounds of milk produced daily. The grain mixture was composed of a twenty-four per cent protein mixed feed and corn meal, linseed oil meal, wheat bran, and beet pulp.

The grain, which was the most expensive part of the ration, cost $188.65. During the year $683.19 was received for her milk. This allows a profitable margin between the total cost of feed consumed and the income from the sale of milk.

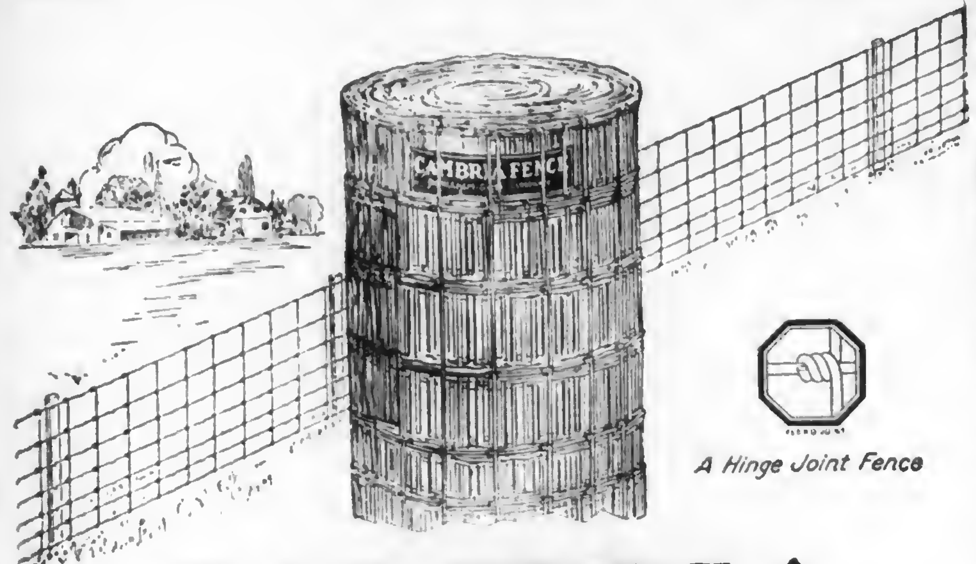
At the end of the test period Gertrude Claire weighed 1290 pounds, having gained about 200 pounds during the year; she carried a calf for 165 days of the test. She was milked three times daily thruout the year, averaging about fifty-one pounds of milk per day.

Gertrude Claire has had three calves in twenty-two months, dropping the last one just before starting her recently completed test. The first was a bull and was sold to a neighbor for five dollars. The last one was a bull for which an offer of $1000 was refused. He was sired by Brookmead's Royal Warrior, a grandson of Langwater Warrior; because of his excellent breeding he is being retained for use as a herd sire in the Hartzell herd. His first two sisters to complete yearly records made 635 and 625 pounds of butterfat in Class F and Class G respectively.

Learned to Study His Cows

Heading the list of cows in the Butler County Cow Testing Association, Gertrude Claire was first brought before the public when she produced 9839 pounds of milk and 508 pounds of butterfat as a junior two-year-old. At the same time, seven of her stable mates average 438 pounds of butterfat. "This work," says Mr. Hartzell, "taught me to observe my cows closer and make a study of their characteristics. It eventually led me into advanced registry work."

The new champion was purchased as a calf from J. B. Duffey, of Butler County. Fourteen of the twenty-six purebreds in the Hartzell herd are of the same breeding as Gertrude Claire. At the present time her full sister, Helen Bates, is being tested, and Mr. Hartzell estimates that her production for the year will be around 16,000 pounds of milk and 750 pounds of butterfat in Class A.—A. L. Beam.



A Hinge Joint Fence

CAMBRIA
FENCE

Good Fence Must be Made of Good Steel

CAMBRIA FENCE is a product of Bethlehem manufacture—with Bethlehem quality. It is made at our Cambria Plant (formerly Cambria Steel Company), Johnstown, Pa., where high grade farm fencing has been built for many years.

Every care is taken to maintain the high quality of CAMBRIA FENCE—in the selection of the steel going into it; in the rolling and drawing of the wire; in the galvanizing process; in the final inspection of the fence.

CAMBRIA FENCE is a *hinge joint fence.* The stay wires are attached to the line wires by the "Flexo Joint," which is recognized as the best method for securing the wires.

There is a style of CAMBRIA FENCE to meet any requirement of the user of field fence. You can depend on uniform construction, uniform quality, and uniform long life to each kind.

Ask your Dealer for CAMBRIA FENCE

Other Bethlehem Wire Products include: Fence Staples; Wire Nails; Barbed Wire; Plain Wire; Galvanized Wire; Bale Ties; Barbless Twisted Wire.

BETHLEHEM STEEL COMPANY, Bethlehem, Pa.

OUR FARM

Where an Editor Works and Thinks

FOR some time there has been an interesting controversy between potato growers in eastern Pennsylvania as to which variety of potato, the Russet Rural or the White Rural, is the better to raise. During the past five years the Russet Rurals have come into great prominence, thanks largely to the work of Doctor Nixon, of State College, and to the fact that the majority of members of the 400-Club have raised that variety. On the other hand, we find some potato raisers who have some difficulty in introducing them into their markets. Consequently, those people claim that the Russets are not as good as the White Rurals.

It is extremely doubtful whether either one can prove his side. On two different occasions we saw tests conducted by Doctor Nixon which seemed to substantiate this doubt. Specimens of both kinds were baked and fed alternately to men who were blindfolded and no one was sure of a difference. In fact, more than half of them guessed wrongly as to which was which.

The next question bearing on the subject is, which is the better yielder? Again the testimony differs. Most of the people who have made the 400-Club did it with Russets; but that is probably due to the fact that they planted Russets. Some who planted White Rurals also raised 400 bushels and over. We have no knowledge of yield tests made of the two varieties planted side by side.

We have come to the conclusion that the chief factor to be taken into consideration is, what is the color of the soil on which they are to be planted? The skin of the Russet is, as its name suggests, darker and tougher than the skin of the White Rural. If the soil in which they are grown is dark, or reddish, it will cling to and tinge the skin still more, and they will not present a bright attractive appearance, such as a finicky market demands. On the other hand, Russets from the Macungie district in Lehigh County, Pa., bring a premium on the potato market, due to the lighter, cleaner appearance which the type of soil in that neighborhood produces. Moral: Look at your soil.

* * *

THE soil on Our Farm is of a slightly reddish tinge. We found last year that the Cobblers came out nice and white, while the Russets raised along side had a less attractive color, altho they were dug when the soil was drier. This year we plan to plant White Rurals for the reasons given above. After all, the market demands are the final arbiters in the matter of what to raise. I have sometimes felt that many farmers are too much inclined to be guided by their own likes and prejudices in the matter of variety, breed and grade. It used to be a favorite phrase of institute lecturers when talking on poultry or dairy cows to say, "Select the breed you like the best." That would be all right for the farmer who is producing for his own family only, but the farmer who produces for the market must furnish what it wants, in the way it wants it, if he is to succeed.

* * *

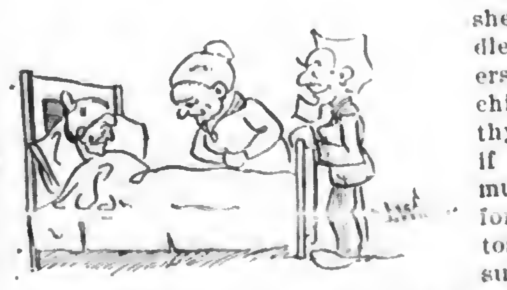
WITH this column I finish two years of writing OUR FARM notes. During that time two were omitted because of pressing work on the Farm. The acreage of the farm has been trebled since the first notes were written and my love for and interest in the work has increased in like proportion. Development has been slow because we have been following the old maxim, "Be sure you are right, then go ahead." On the whole, the writing of these notes has been a pleasure. Because of it I have received much good advice and many kind wishes. Sometimes it is a serious question as to what should be written. If you have so much space to fill in a newspaper you will find times when your mind is a complete blank, with no sign of an idea appearing anywhere. Doubtless this has been evident to you many times. Again,—I sometimes wonder whether it is worth while; whether the space might not be filled to better advantage and my time better occupied at something else. The answer to this question is not yet definite. But, unless I get letters to the contrary, I propose to start the third year of writing some things as they come to me, whether they be of great or little importance.—R. P. K.

Very often when we get what we think is a bargain, we find afterward it would have been better to have paid a good price for something more substantial. The cheap friendships which cost us little or nothing, often give as little as they cost, while that for which we paid by taxing our natures to the very depths, becomes a priceless possession.

Even if the doctor does not give you a year, even if he hesitates about a month, make one brave push and see what can be accomplished in a week.—Stevenson.

THE CHEERFUL PLOWMAN

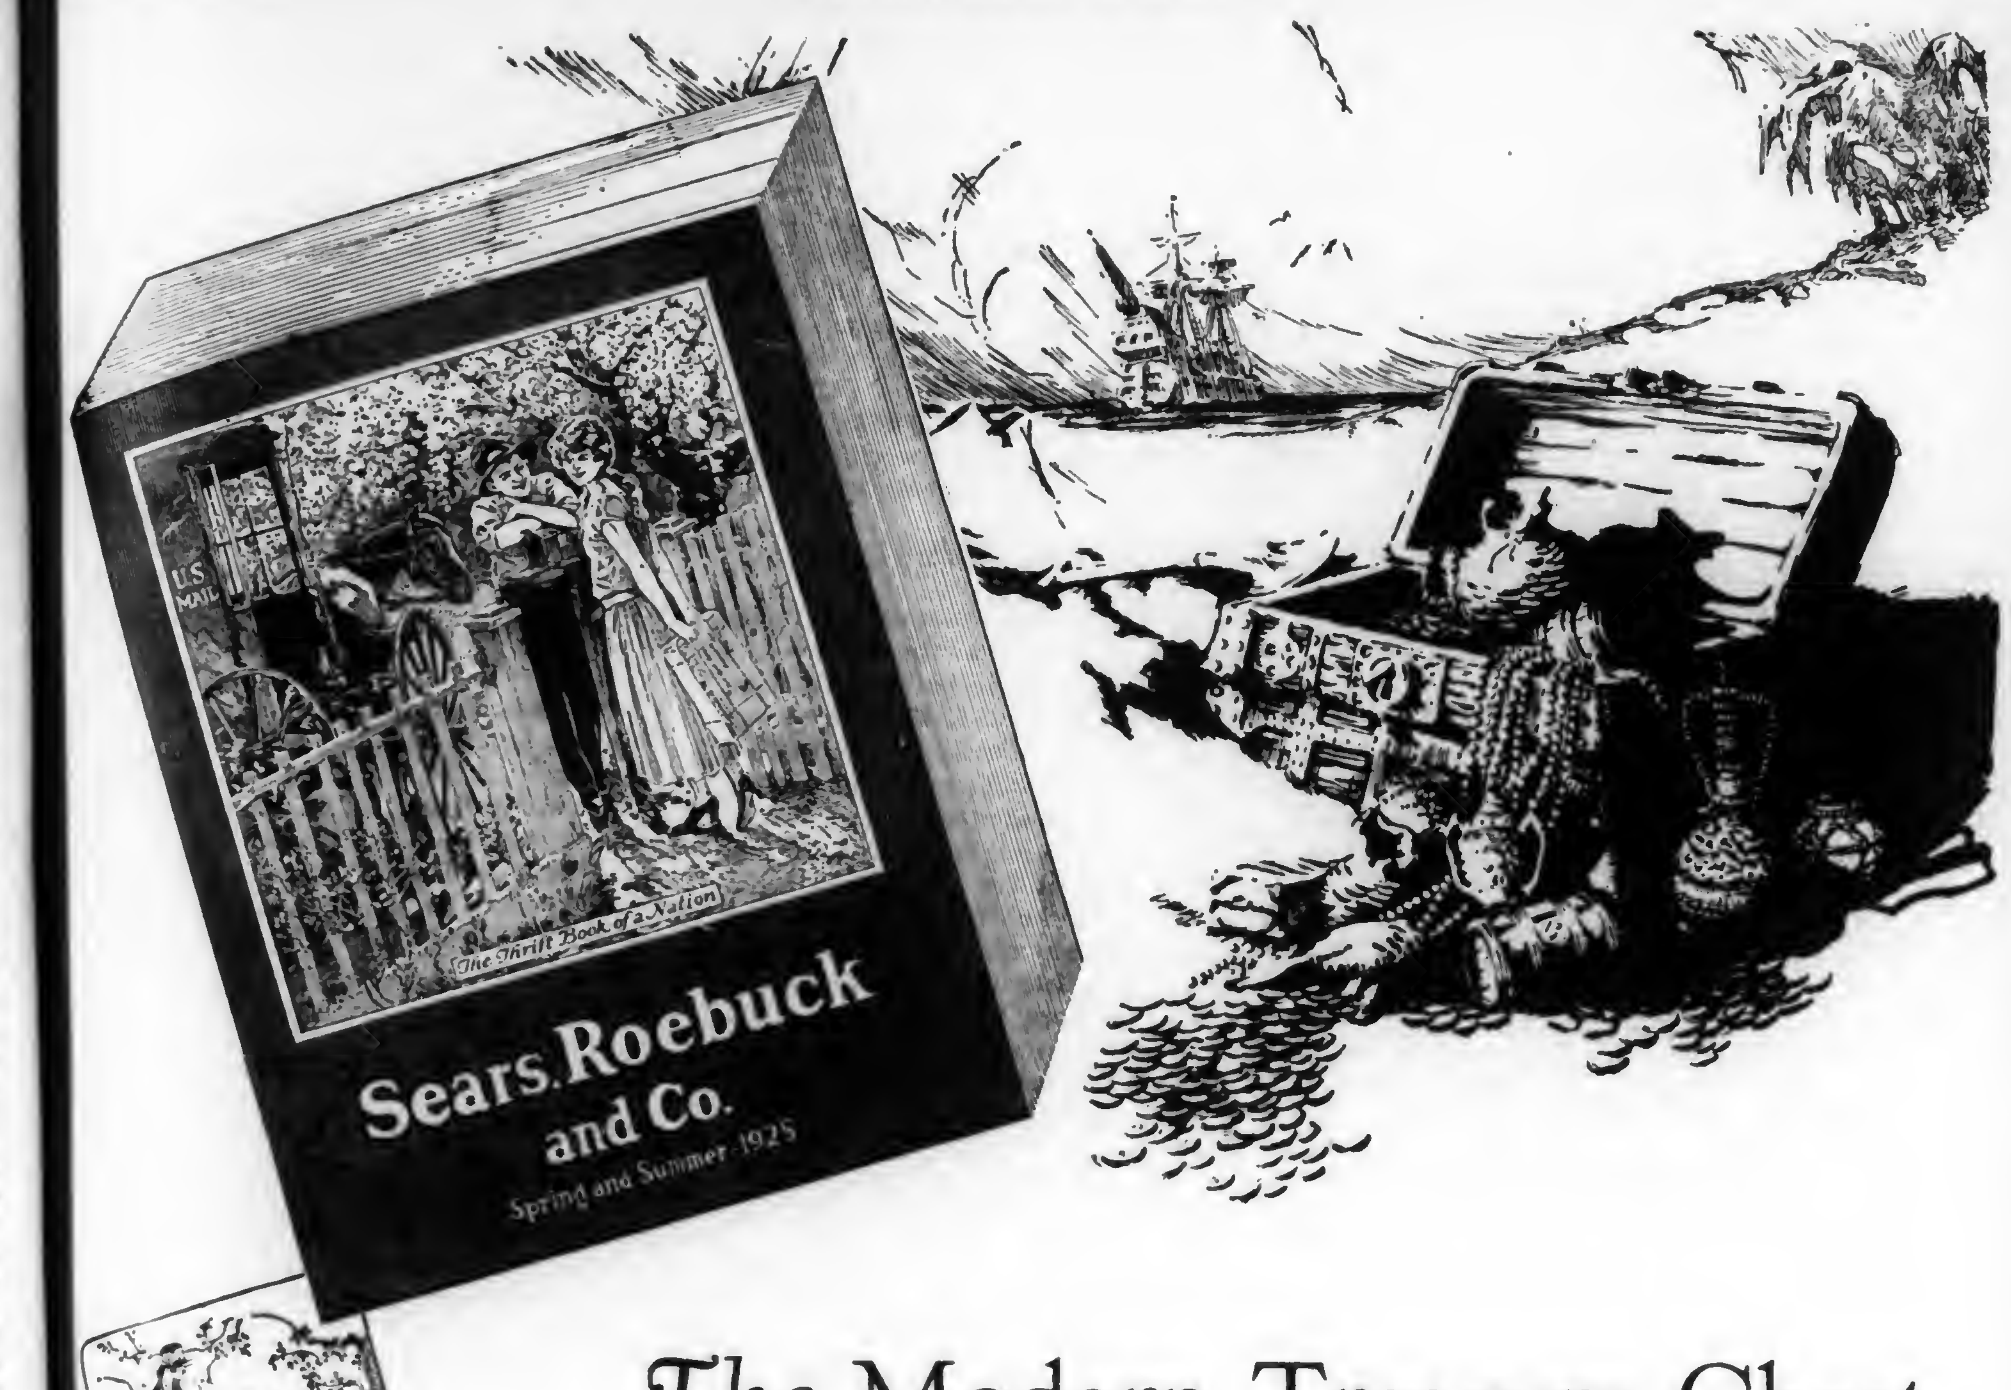
A Matter of Diet



COUSIN CYNTHY eats no meat, sugar-plums, nor pickled beet; she has banished spuds and hash, griddle-cakes and succotash, onions, wieners, salad, fries, ginger-snaps and chicken pies. For her breakfast Cynthy finds great results in melon rinds; if you lunch with her at noon you must eat the famous prune; just before she goes to bed then she nibbles toasted bread. Dieting, she's very sure, is the universal cure.

Her ma never stops to think what to eat nor when to drink; likes her coffee fairly strong, downs whatever comes along; eats tomatoes, pork, and beans, buckwheat cakes and nectarines. With her two-and-thirty teeth she can chew the toughest beef; carries smiles and ample girth, never has an ill on earth!

Just at present, she, I fear, has her program full, poor dear: Cynthy's had a sharp attack, stomach-cramp and aching back; both her sides are getting worse, and her mother's there as nurse! Cynthy's dieting, they tell, as a means of getting well, while her mother, all astir, eats three squares and cares for her!—J. Edw. Tufft.



In Less Than a Day Your Order Is On Its Way

The Modern Treasure Chest

In the days of the Spanish Main the search for hidden treasures brought adventurers to all parts of the world. And most of their travels were in vain.

Today there is a modern treasure chest — Our Big General Catalog — which brings the treasures of the world right to your own doorstep!

You may draw on the endless supply of the best of the world's goods without moving from your own easy chair —and make big savings while you are doing it! Nine million families — or nearly one family of every three in the United States — use our catalogs to get dependable merchandise at money-saving prices.

If you are not now getting your share of these bargains, we invite you to look through our New General Catalog for Spring and Summer. One glance will convince you of the savings—one order will make you a regular member of the greatest of all families, banded together to save on almost everything needed for the family, the home, the farm and the shop.

We give the best service — 99 out of every 100 orders are shipped in less than 24 hours after they are received.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

To speak wisely may not always be easy: but not to speak ill requires only silence.

What's the Answer?

IT IS a well published fact that the American farmer has increased his output per man during the past decade. It is equally well known, tho not so well published, that workers in other lines produce less per man than they did in 1913. In commenting upon the housing situation in England a writer states the following which might well have been written concerning America.

"In England, for example, with housing a bitter problem, and 36 per cent of every dwelling being a bricklaying job, the number of bricks laid per day grows smaller. In 1914, with a ten-hour day, 900 bricks were laid per man per day, or 90 per hour. In 1920, with an eight hour day, the number of bricks fell to 200! This is twenty-five an hour! Of course, as the output falls, the cost increases, and as the costs increases, building ceases—and the policy of making more work by doing less results in no work at all."

This hits the question of increased costs squarely on the head. Supposing farmers with their decreasing numbers had shortened their hours and lessened the amount done per hour, what would be the price of food in this country? A glance at the effect of a short wheat crop on the present price of wheat gives the answer. It's the old problem under new conditions: What should be the measure of value in wages, costs and prices? Should it be hours of accomplishment?

The Baby Chick Business

ABOUT the only thing that has kept pace with the rapid development of the automobile industry during the last ten years is the baby chick business. The economy of time, and the ease with which chicks can be shipped long distances, are factors which have helped make the hatching business popular. As is natural, however, certain factors have developed which need correction in the interest of safety and satisfaction to the buying public. Some states have devised plans for inspection and certification and others are doing so by which the plants and breeding stock of chick hatcheries are officially inspected and those which meet the requirements set are given a certificate. This puts them in the "Accredited" class. This is a good move and will work no hardship upon the careful, honest people in the business, but will make it possible for buyers to avoid brokers and "gyp" dealers who do no hatching but depend upon buying what and where they can. There are many reliable hatcheries which have been in business for years and are worthy of full confidence. Business may be safely done with them while the state authorities are working out a plan of inspection and certification.

Who Will Be Secretary?

UNDER ordinary circumstances the politicians and newspapers would have had several cabinet slates made before this time. So far as we have seen none has been made up to this time. President Coolidge's reputation for making his own selections without conferences, at least so far as the public knows, may be discouraging to the slate makers. Again, they may be taking it for granted that the cabinet members now holding office, or lately appointed, will be reappointed on March 4.

The case of the Secretary of Agriculture differs from the others. The present Secretary, Mr. Gore, will be sworn in as governor of West Virginia on that date, and this makes the naming of a new secretary of agriculture certain. No one aside from President Coolidge seems to know who it will be, altho W. M. Jardine, of Kansas, and John Fields, of Oklahoma, are mentioned. About as far as anyone seems willing to go is to say that it will be a man holding views about agriculture's needs similar to those held by the President and Mr. Hoover. Their views seem to be to the effect that what farmers most need is business leadership, and that the Department of Agriculture should be reorganized by turning the marketing activities over to the Department of Commerce, leaving the administration of executive and police duties as the chief function of the agricultural department. In order to do this it would be necessary to have a secretary of agriculture who is in sympathy with such changes. Previous secretaries, as well as farm organizations in general, have fought every such move in the past.

The above are only surmises, but a rather careful reading of the comments made by the President and Secretary Hoover make them seem logical deductions.

Shall We Stop the Supply?

IT HAS lately become common knowledge that the greatest difficulty in the enforcement of the prohibition law in Pennsylvania is the lack of authority over the manufacture and distribution of denatured alcohol and of brewery establishments. A new bill giving the authority to exercise a strict control over these two sources of supply of bootleg liquor has been prepared and introduced into the Legislature. Its fate at this time is problematical. The reports are that the members of the Legislature from the districts where this illegal trade has its source, Philadelphia and Pittsburgh, are almost solidly against it.

There has been almost unanimous approval of the bill by those who believe in enforcement of law, regardless of whether they are in sympathy with the Eighteenth Amendment. Newspapers which have not been strongly in favor of the prohibition law are practically a unit in saying the bill should be passed, since consistency and common decency demand some method by which the dishonest and lawless can be controlled. The Coroner of Philadelphia is reported to have said that poisonous liquor causes the death of twelve people per day in this city. Is it possible that there are enough legislators in Harrisburg who champion the cause of the outlaw and the indirect murderer to prevent legislation for the promotion of law and order?

Farm Prices and Others

THE figures kept by the Bureau of Labor show a gradual tendency in the direction of equalization of prices. Compared with 1913, farm products prices on December 31, 1924, were 156.7 per cent of pre-war prices. Records kept of 404 other commodities show 157 per cent. It must be kept in mind that the advance in farm prices has not been general. The relatively high price of three products—wheat, corn and cotton—increases the average because of their size and value. The following table indicates comparative group prices, using 1913 prices as 100.

	Dec. 1924
Farm products	156.7
Foods	157.9
Clothing	191.4
Fuel and lighting	164.6
Metal products	132.9
Building materials	175.1
Chemicals and drugs	134.6
House furnishings	172.4
Miscellaneous	128.6
All commodities	157

Washington Letter

CONGRESS IN A JAM.—The legislative jam in Congress grows more acute as the end of the session draws near. Night sessions are being held in an attempt to get thru necessary measures. Nevertheless the House spent one whole day in passing two minor District of Columbia bills against which there was little objection. They should have been acted upon in ten minutes' time.

OPPOSE FLEXIBLE TARIFF.—The controversy in Congress over the United States Tariff Commission has been renewed by a statement by Representative William R. Green, of Iowa, chairman of the House Ways and Means Committee, in which he says he favors the repeal of the flexible tariff provision of the Fordney-McCumber tariff act. He declares that the flexible tariff provision accomplished practically nothing and that it has failed to take the tariff out of politics. He wants the commission restored to a fact finding body with the function of assembling information for Congress.

Several of the farm organization representatives are not satsisfied with the methods employed by the Tariff Commission in computing costs of farm products, and have made strong demands for the repeal of the flexible tariff act. It is not believed that the commission will be able to function properly while this provision remains in the tariff law.

THINKS CONFERENCE IDEAS ALL WRONG.—The recommendations of the President's agricultural conference that relate to co-operative marketing are all wrong, according to Aaron Sapiro, representing the National Council of Farmers' Co-operative Marketing Associations. Mr. Sapiro has declared that speculators, brokers and distributors would be able to sit in with co-operative association managers and control markets and prices, and both the farmer and consumer would lose as a result.

JARDINE DISAGREES.—Appearing before the House and Senate Agricultural committees, Dr. W. M. Jardine, president of the Kansas Agricultural College, and a member of the President's commission, disagreed with Mr. Sapiro. He believed that the proposed legislation would do a lot for agriculture. "If we could eliminate a few of the monkey wrenches in distribution," he said, "it would be worth while. It is time for the farmers to get behind some plan and stop fighting each other. The conference recommendations will relieve agriculture and will make a start toward permanent farm relief."

DOESN'T PUT GOVERNMENT IN BUSINESS.—According to Dr. Jardine, the proposed Federal Co-operative Marketing Board would foster, but would not interfere with or dominate development of co-operatives. The co-operatives do not have to work with it if they do not want to. The recommendations were not intended to meet an emergency, but with a view to basic and continuing needs with respect to marketing. They are directed primarily to the end that haphazard production and disorderly marketing may give way to balanced production and efficient and economical marketing. They head up in a federal agency, completely under the farmers' control to furnish essential services to such farmers and farmers' co-operatives as voluntarily apply for them. It was not intended to put the government into the business of marketing farm products.—E. E. Reynolds.

Harrisburg Letter

FOLLOWING THE BUDGET.—The general appropriation bill to be passed by the legislature of 1925 will not be so very much different from the budget submitted by Governor Pinchot. There may be deviation from the figures here and there in departmental allowances, and the lump sum plan of appropriations to charities not under state control will be disregarded, but in the main the basic ideas will be enacted into law. One reason is that the budget was built upon a rigid system of control in appointive departments and the sums allowed the elective branches were not much reduced except in one instance and that may be a source of controversy, with the Governor having the last say.

PLAN PEST FIGHTS.—State officials in charge of campaigns against the pests for which appropriations have been recommended are getting their plans ready in expectation of some hard fights against the beetles, borers and other bugs afflicting portions of Pennsylvania. The heavy snows are held by the Capitol scientists to help the pests and they anticipate there will be plenty of colonies to meet when the time comes. The state plans are being made in conjunction with those of the federal government.

CHECKING UP FARMS.—The average farm would be about the hardest thing in the world to lose, but there have been some rather odd things turning up in the census data on farms of certain counties. In one instance it was found half a dozen farms were missing from one report. In checking up an error in addition was found, but it took a hunt a good bit like a banking house seeking two cents to make the day's business balance. As a matter of fact the farm census is coming along splendidly and is producing data which will be of the utmost value to students of economy, commerce and agriculture in a few years.

MOTOR MONEY TO STAY.—Notwithstanding various machinations it does not seem probable the bills to divide revenue from licenses for motor vehicles between state and counties will get very far. The demand for improved roads is so strong that even the legislators from cities are commencing to hear from their own constituents, particularly those who own motor cars and trucks. The sentiment for division of this money has not gained the last month.

AFTER STRAY DOGS.—Owners of 200 dogs found killing game have been fined and more than 200 dogs killed the last month as the result of a drive in sections where it was reported game was suffering from the depredations of dogs. Most of the dogs captured came from villages.

MORE BUS LINE CASES.—The [illegible] Service Commission has declined to grant any certificates for operation of bus lines, even when proposed to be run in conjunction with trolley systems, without hearings. It has been found several enterprises were to be started because of popular demand, but the commission took the stand licenses could not be given without due advertisement and public hearing.—Hamilton, Harrisburg.

New Jersey Letter

SOUTH JERSEY POULTRY NOTES.—The Cape May County Poultry Association started in the new year with an active program at its recent annual meetings. The secretary's report showed that the association had secured thirty-four new members during the year and lost six, leaving a net membership of 102. The Atlantic County Federation of Poultry Associations, comprising five local associations in the county, held its annual meeting and banquet early this month. A large number of poultrymen attended the session. The Southern Ocean County Poultry Association has planned to forego its annual poultry show this year because of the chances of bringing into the county fowls which may have been exposed to contagion.

MOSQUITO COMMISSIONERS MEET.—Speaking before the twelfth annual meeting of the New Jersey Mosquito Extermination Commission in Atlantic City recently, Dr. T. J. Headlee, State Entomologist, pointed out that continued work on the part of the state is necessary to prevent a recurrence of the mosquito now so well in control. He deplored the cutting of state support and urged members of the commission to use their efforts for the continuance of the work.

NEWARK MARKET SUCCESSFUL.—The report of the director of the Center Market in Newark for the first year of its operation shows that the market is not such a "white elephant" as has been reported. Director Gillen said that the market had been practically self-sustaining. Taking into account the sale to be made of the old Farmers' Market Plaza which gave way to the facilities offered by the new market, the market debt will be reduced by at least two-fifths. The report of the director further shows that farmers as well as others have used to a large extent the facilities offered by the municipal market and that the market stalls have been practically all taken.

MANY HORSES STILL REMAIN.—Statistics recently available show that nearly 70,000 horses are within the state limits of New Jersey. The automobile has not crowded out the horse by any means; in fact, statistics for the entire United States show more horses than at the close of the war. In New Jersey the automobile has eliminated the horses from the roads and for the long hauls. Farm statistics, however, show practically as many for use in the fields and for short city hauls.—B.

New York Letter

FARMERS' RECOMMEND A REGENT.—The legislature this week will appoint two members to the Board of Regents, the most powerful body in the state in school administration. The farmers have demanded at least one of these appointments for their representative, M. C. Burritt, former farm bureau state leader. Seldom have farmers been so united in a selection.

HOME RULE WORKING.—Twenty-nine cities of the state are now testing the home rule enabling act, most of them with conservative dry law regulations. The expected prosecutions to test the validity of the new plan have not been made. The new superintendent of the Anti-saloon League is gaining public approval and announces that unrelenting efforts will be made to harness prohibition enforcement to the administrative machinery of the state. The League is now conducted on a budget system, with vouchers, and semi-annual audits by public accountants.

ICE HARVEST LOST.—Farmers in many sections face an ice famine, as deep snow has prevented the usual harvest, and now a warm wave has broken up and carried away the ice in most ponds and streams.—M.G.F.

The Favorite Silo!

Because of its *patented improved* features and *durability* the Unadilla Silo *outsells* any *2 other silos* in the east and is used on the *finest* estates and dairy farms.

The door fasteners form a permanent *safety* ladder, *convenient* and *secure*. Hoops are *easily* adjusted from it. *No more dangerous adjusting* from *easy slipping* ladders.

Its *air tight, water tight* doors that *cannot* stick or freeze have the *additional advantage* of giving *continuous* opening at the *level of the silage!* No more back breaking work pitching silage out over your head. You simply *push it out.*

Hoffman's Seeds Pay!

"Sow Them for Your Protection and Profit"

Alfalfa
Clovers
Timothy

If there's one right place for Quality-Seed, it's on the Alfalfa and other Grass-crops. Here is offered that kind of *Alfalfa Seed.* Cleaned clean—free from foul weeds. Good, sound, hardy, northern United States grown Seed. No other kind does as well—stands the winters better—gives as much growth—lasts as long. Bought right in the producing sections, under affidavit as to its genuineness. Costs you but very little if any more than most ordinary Alfalfa is bringing, and will always prove the cheapest in the end. A little booklet "How to Grow Alfalfa" (with a few pages on Sweet Clover culture) sent free to all who ask for it—you may find it of some help.

CLOVER SEED—With prices on most Clovers so high, unjust dealers now have a fine chance to work in off-grade seed, because they can under-bid other prices. Beware of the low-priced Clovers this year! There are no 'Bargains' in highest-grade Seed! Lowest prices and the truly best Seed simply can't go together! Safest plan is to buy Hoffman's "Extra" brand Clovers and be assured of the cleanest, soundest, hardiest seed made on this year's crop. They will give you the right results! Samples free.

TIMOTHY—Extra pride is taken in our famous "Farmers Choice" brand Timothy Seed. True northern-grown seed, and cleaned as near to perfection as humanly possible. Tests show no dangerous weeds. The entire content only 1-20th to 1-25th of one per-cent. This very popular brand is more widely used each year. Let us send you free sample.

This new Catalog offers above Grasses—all the Spring Grains, Barley, etc.—Seven heavy-yielding Oats, 'side' and 'tree' types. Ten kinds of Seed Corn (for Silo or Crib) and good dry, sound, solid seed it is—germinates 92 to 98%, indeed rare quality Seed Corn for this year! Soy Beans, many varieties, with full cultural details on this crop. Field Peas to plant along with Oats for early green feed. Seeds for other spring and summer crops. By all means, get this Free Book—it is more than just an ordinary seed-catalog. Just mail your name and address on a Post-Card—today.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser
Manager Pomona Gardens, Newark, Delaware

When Lime Helps Crops and When It Doesn't

IT IS a fact that not many vegetable growers use lime regularly nor with much assurance that their crops are going to be helped. This may be due to lack of faith in lime, but more likely it is due to the fact that when lime has been used on heavily manured land it has not seemed to pay in crop improvement.

Times are changing, and there is no one thing that represents the change better than the shortage of manure and the increasesd use of commercial fertilizers. It is entirely probable that growers who had little profit from the use of lime when they were at the same time using forty to fifty tons of manure per acre, will now be able to use it with success.

One benefit from heavy manuring, which we do not now get from fertilizers alone, is a certain amount of protection against soil acidity. Certain of the fertilizers we commonly use are believed to help make soil sour, light sandy soils more easily than heavy soils, but when lime is used on these soils the fertilizers are entirely safe.

Better Than Man Power

One of the many ways truckers use garden tractors.

Changed Ideas about Liming

There have been big advances in late years in our understanding of the need of lime for crops and soils, tho we may be just as far as ever from being able to tell just what application should be made in every case. The idea used to be to use lime enough to make the soil alkaline, or sweet. Then we found that all crops do not thrive on an alkaline soil, and that a few are even hurt by such a soil.

Lately we are finding that very different amounts of lime are needed to bring different soils to the same desired state of sweetness. Thus there are two points hard to determine, in the case of vegetable crops, when we set out to lime a field,—how sweet do we wish the soil to be, and how much lime must we apply to make the soil just that sweet.

A Hard Problem for Truckers

Truckers, too, have a special difficulty in the use of lime because they often grow a lime-loving crop immediately after an acid-loving crop has been harvested. They often wish to grow on the same field, over a period of perhaps two or three years, four or five different kinds of plants that undoubtedly differ in their need for lime.

The truckers at Norfolk have a serious problem of this kind, one that probably has become more serious since they have had to turn more largely to commercial fertilizers as sources of plant food. White potatoes, if they do not actually need an acid soil for their own best growth, at least need it if the tubers are to be free from scab.

A man who grows only white potatoes might be satisfied to keep his soil well on the acid side. But then, if he wished to grow spinach on the same land in the same year, as the Norfolk growers often wish to do, he would find that lime would be necessary for the best growth of that crop. After he had limed heavily enough to make the spinach grow to its largest size, the land for several years might well be too alkaline for a scab-free crop of white potatoes.

This problem of potatoes and spinach is not the only one of its kind; it is only noticeable because the Norfolk growers plant these crops on a large scale. Every one of us, if we knew the whole truth, undoubtedly loses money every year because for some one of our crops our land is not at just the right state of acidity or alkalinity.

Green Manure and Cover Crop

This problem of soil acidity is going to be much worse for the man who depends entirely on commercial fertilizers than for the man who plants cover crops and green manure crops at every opportunity. It seems that the older growers, when they used generous amounts of animal manure, were at the same time taking care of soil acidity.

Green manure crops are not entirely satisfactory as a substitute for animal manure, but they do seem to add to the soil such amounts of organic matter that the soil is less readily made very acid or too highly alkaline. A soil rich in organic matter is less subject to sudden changes in lime requirement.

After we have taken care of the need for organic matter, we can use fertilizers with much greater chance of safety and of big crop growth than if we have tried to switch from a manure ration to a fertilizer ration without attention to cover crops.—W. C. P.

Lettuce Kept Best

LETTUCE plants from seed sow in frames outside last fall a still in good condition, tho cabb plants, which were in the seedli stage at the time of the first freeze early November, are entirely kill This fact surprises me a little, b cause I usually think of cabb plants as being about the hardi thing on the list.

Both lettuce and cabbage were open frames when the temperat went down to 22. Now there is sign of cabbage, but a perfect sta of all varieties of lettuce. We k the sashes on most of the time, a the lettuce plants show signs of sl growth. If the winter is a short we can get these out by the first April, but to make them har enough we will have to give th plenty of air in March.

* * *

What has been the experience northern gardeners in the use southern grown onion plants of Bermuda type? Last year we had good demand for bunch onions June and July, and it seems like that these southern plants m serve the purpose better than ordi ary sets. Some Prizetakers that started indoors in flats were in e cellent condition for bunching b fore the sets were ready, but I hard think one could afford to grow the regularly for this purpose. Certain one cannot grow Prizetaker plan transplanting at least once befo field setting, for the advertised pri of southern grown Bermuda plan —W. C. P.

State Horticultural Meetings

Pennsylvania Fruit Growers Discuss the Latest Developments in Orcharding at Harrisburg

By S. W. FLETCHER

Staff Contributor and Adviser

THE time-honored State Horticultural Association, which has contributed more to the advancement of Pennsylvania horticulture than any other single agency, had a very successful meeting at Harrisburg January 20-22, in connection with the Farm Products Show. The attendance at several of the sessions exceeded 500. The secretary's report showed an active membership of 812, a net gain of eighty-eight over 1923. The Association has organized seventeen county horticultural societies during the past three years, with a total of 470 members, all of whom are also members of the State Association.

Fruit Developments

DOCTOR FLETCHER'S report on the recent meeting of the Pennsylvania Horticultural Association which begins on this page is a comprehensive review of the latest developments in many phases of the science of orcharding. The various subjects discussed may be located as follows:

Apple scab	10
Pruning	10
Fertilizer for peaches	11
Variety certification	11
Fertilizer for apples	22
Deer damage	22
Advertising fruit	22
Oriental moth	22
Spraying	23
Peach drop	23
Peach yellows	23

The organization closed the year with no obligations and with $800 in Liberty bonds. It is the only state agricultural society publishing an annual report; the 1924 Proceedings comprised 200 pages. H. C. Brinton, of Hanover, was elected president; S. L. Smedley, Jr., of Newtown Square, vice president; S. W. Fletcher, of State College, and E. W. Thomas, of King-of-Prussia, were elected secretary and treasurer, respectively.

Apple Scab Causes Great Loss

The Vegetable Section also had a good meeting, electing Thomas Biddle, of Bustleton, president, and W. B. Nissley, of State College, secretary. The indications are that next year this group will organize a separate State Vegetable Growers' Association, in affiliation with the Vegeta Growers' Association of America.

The opening session was dev largely to a discussion of apple which caused a far heavier loss Pennsylvania growers last year tha the Japanese beetle and Ori fruit moth. C. R. Orton, of Sta College, showed that the spring fection came wholly from last yea leaves lying on the ground, h the advantage of a cultivated chard, in which these diseased leav are plowed or disced under before spores are spread. But unless entire ground is stirred, right up the trunk, and the fence rows clean, there are likely to be diseased leaves left to infect the and foliage.

Dusting for Scab Control

Mr. Orton stressed the nec of frequent applications of spray early spring, perhaps at ten-day tervals, to protect the new leaves they appear.

H. W. Thurston, of State Colle reported the results of five experiments on scab control at S College. Dusting has, on the given as satisfactory results as spr ing in the work there, altho growers, especially in the south ern counties, reported quite opp results.

A. F. Mason, of New Jersey, ported the results of a pruning de onstration in the orchard of Em Roberts, of Burlington, N. J. Th are Rome Beauty trees, about th years old, and the orchard has one of the most productive in state. In recent years, however, apples have been getting sma more scabby and of poorer color. T trees have thus far been pruned little, on the "let nature take course" theory.

Pruning to Increase Yields

In the spring of 1923 a row heavily pruned, lowering the eight or ten feet, by cutting to branches and leaving limbs to s the large wounds thus made to vent sunscald. Special attention given to thinning out the branches and twigs on the of the tree, the Rome being a twiggy variety. The time spent one and one-half hours per tree.

In 1923, the first season after ork was done, the unpruned trees d a crop only thirty per cent of ich were three inches or over, ile the pruned trees had a crop th fifty-four per cent three inches over. There was also an improvement in color.

In 1924 a light pruning (thirty nutes per tree) was given to the me block of trees. That year the op was fifty-four per cent three ches or over, as compared with rty-three per cent of that size m the unpruned trees. The heavy uning reduced the total volume of it somewhat the first year, but is was much more than offset by e higher grade.

The York Imperial was reported a number of growers who cater local markets as rapidly losing ound in competition with the Stay n and other quality sorts, altho is acknowledged to be an excel t cooking variety. On the whole e and export market, however, the rk is still standard, and probably ll be for many years to come.

ail Insurance—Nitrate on Peaches

Sheldon Funk, of Boyertown, and J. Tyson, of Flora Dale, reported isfactory experience with hail in ance, notwithstanding the com atively high annual premium. It probable that this drawback will overcome, as growers use this pro ion more commonly. That part Berks County where Mr. Funk is ted has had but one peach failure forty years—that of 1921. He ex ds his peach season several days using nitrate heavily on certain s.

He gets about seventeen half hel baskets per tree; a good ker can pick 100 baskets a day, the average is nearer fifty. It es seven packers to pack a car a . His market is chiefly Boston, his season normally comes in ween South Jersey and New York, thern New Jersey being out of h growing now.

r. Funk has mostly Elberta, but ld plant more Hiley than any er white peace, not Belle of Geor which comes on the market with er sorts. Early Elbertas will not g a good price; their color is inst them. Matthews Beauty, h is usually three days ahead of rta, is preferable. The later the tas ripen, as a rule, the more ey they bring.

Apple Variety Certification

K. Shaw, of the Massachusetts cultural College, showed that it racticable to certify the standard eties of apples as true to name inspection of the stock in the nur row. The additional expense— t five cents a tree at present— ll compared with the advantages ed. Two New York nurseries offer trees that have been certi by the Massachusetts Fruit Grow Association and had exhibits at Farm Products Show.

why should we have to go out the state for these trees? Dr. stated that the State Horticul Association, in co-operation with state Department of Agriculture State College, is the logical agency ertake this work, and that his would be available for the ation of trees in Pennsylvania ies that desire it, until some own men can be trained to dis h the varieties.

believes that nurseries will ally secure certification, as a

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

A Former Soldier Goes into the Poultry Busi

Would you be kind enough to give me your opinion of the probable success or failure of the following venture:

I am thinking of starting a poultry farm in eastern Pennsylvania. My goal is 2000 laying hens. I do not intend to breed any. I will buy baby chicks to get my layers. All cockerels will be sold as soon as they can be determined and made ready for market. If I am unable to get a local market I intend to ship to commission merchants in New York or Philadelphia. I will trapnest 100 birds only, to check up on results and feeding methods. I intend to build four modern fresh air houses 100 feet by 16 feet. These houses to be separated by partitions into sections for 100 birds. I will grow my corn, mangels, etc., but buy a laying and growing mash.

I intend to buy a cheap, rundown farm, regardless of the condition of the buildings. I am looking for land and location only. I intend to live in town and go out in my car each morning. Being modern, I regard any kind of a farm as a factory and think the right place to live is in a community.

I am thirty-two years old, single, have seen many years of

Getting Their Morning Exercise

Bright sunshine kills the disease germs in this poultry house.

service in the army, am strong, physically, and have always lived in the country. I am an all-around mechanic and intend to build these houses myself; in fact, I intend to do all the work myself the first year. No animals or livestock of any kind will be kept, except the hens. When plowing has to be done I will hire the plow and horse by the day.

I will devote all my time to manufacturing quality eggs. Only White Leghorns will be kept. I intend to get going about March 1 and hope to have 500 to 1000 layers by next winter.

I have about $5000 in capital. Can money be made with 2000 layers? Do you think a man can make a decent living in the poultry game with a reasonable amount of luck? Do you think my capital is all right? You know, I have to live many months before I can realize a nickel.—T. S., Nassau County, N. Y.

I think the weakest link in your plan will be living away from the poultry farm and attempting to make the trip back and forth in a car. Poultry are always in danger from thieves and the owner and a good watchdog are needed at night on every poultry farm. During brooding season the working day is long and the brooders may need att at night if a high wind comes u makes the fuel burn too fast the draught.

There are many nights i spring when, if necessary, I rather sleep on a cot in a house than leave the farm. the busy season on a poultry man is so busy during the day so tired at night that living in has little charm. All you want comfortable bed as near to th as possible.

Morning Inspection at Dayb

The farther away from the you happened to live the earlie would have to get up in the ing. Chicks need attention a light. The best method is to early and promptly make the of the colony houses. Breakf the owner comes after the m inspection has been completed.

Your mechanical ability is a asset. It costs money to hire c ters. If you can buy a farm equipped with a variety of bui you can possibly remodel sev them into serviceable poultry h This will cut down expenses a able you to use more capital where.

A capital of $5000 is a nice start to engage in the poultry ness. I would pay down as litt possible, on the farm and lea much as possible for use in p tion work. Do not spend all the ital at once. Keep enough on for the unexpected expenses that occur before the business is on a ing basis.

Keeping Two Thousand He

It is no joke to lose $5000 aft has been carefully saved from Personally, I believe there is a risk in the poultry business think you might better keep money for a couple of years and out on a commercial poultry where they maintain about the layers that you would like to someday. Then you can study problems and educate yourself poultry matters and draw wag the same time. When you feel fident that you can start out yourself, you will have that plus the interest it has earned be able to use it to good advan

Two thousand hens is a large You might have to buy 6000 c to raise 2000 good pullets. Ha the 6000 would be apt to be coc els. With 3000 prospective pulle the hatching time you could have a moderate mortality rate

do some rigid culling and have 2000 good birds left.

Of course, there is no guarantee of how many you can raise. The only sure thing is the fact that chickens do the best when there are only about 300 to a brooder stove in a colony house. So it takes a lot of equipment to handle chicks by the thousands.

It requires experience properly to brood and feed large flocks of little chicks. Without that experience the operator would be worried sick over the things that may happen. He will need nerves of iron to keep going day after day without having the blues. The experienced chick raiser handles the brooders successfully without excessive worry and avoids a lot of the troubles which bother the beginner.

Buying Chicks Saves Trouble

Your plan of buying chicks and doing no breeding will cut out a lot of detail. You will save the feed bill on the cockerels and avoid the work necessary to care for special breeding pens. If you buy the chicks from a good hatchery you will obtain good stock. I doubt if you will need to trapnest any birds if you are not going to do breeding work. The results in egg production for a pen of 100 birds will act as a check on the feeding methods.

There is really little gained in going to the work of obtaining trapnest records unless you use those records to breed more good stock. However, the trapnesting may be very interesting and I believe it will start you into breeding work for yourself as soon as a few high record hens are located.

Planning on a start with 500 hens next fall will place the business on a fairly safe basis. You don't realize how much difference there is between keeping 500 and 2000 hens. The man with 500 has a little time to devote to field work or the care of livestock. The man with 2000 hens is a poultry specialist and must devote practically all of his time to poultry management.

Starting with 500 Hens

Some men who do well with 500 hens do not succeed as well when they have 2000. The 500 job gives them a chance to place their mind on other jobs at frequent intervals. With 2000 hens to manage they are never free from poultry worries and finally the close confinement to duty and the steady job of fighting dirt makes them very sick and tired of the poultry business. This is often followed closely by a gradual drifting into other lines of work.

I feel that no poultryman can advise another as to whether he should engage in the business or not. No predictions of possible profits can be made. Here is the safe way. Work on a poultry farm. If the job is not satisfactory, try working on another poultry farm. Become steeped in poultry information from first hand experience. Then you will know if you want to keep 2000 hens. And you will some day find just the kind of a farm you want for your business. And you will buy it without asking advice because you will have had experience and know just as well as the other fellow whether the deal is a good safe bet or not.—R. G. Kirby.

Judged by Your Yard

IT IS almost possible to tell the character of a farmer by the appearance of his home. Try it out some time. Drop in at a farmhouse, no matter how small and old, that stands in the midst of cleanliness and neatness and see what kind of folks answer the door there. Then go home and see that your own front yard represents you as you want people to think of you.—J. R. Bracken.

MRS. GREEN—"Aren't you extravagant buying ready-prepared feed for your baby chicks?"
MRS. WHITE—"I'd be extravagant not to; I never had any luck raising them until I did."

Success With Baby Chicks!

You Needn't Coddle Them, But They Must Have the Right Food

You don't find the *experts* mixing feeds for baby chicks! It's the folks who don't know how much depends on *scientific* feeding. Pratts is best for baby chicks because it is *baby food.* Years of study have perfected Pratts buttermilk baby chick food. What chance has any farmer to come even *close* to duplicating it? Or of finding food as good for *growing* chicks as Pratts growing mash?

Even the *milling* of the grains used in Pratts is special for baby chick needs—mechanically preparing it for easy digestion by a few days' old chick—not too much of anything, and enough of a dozen vital things the baby chick system must have. There's no guess about it—a Pratts fed brood of chicks will thrive and live—escape disease—take on strength which will raise every *liveable chick.*

Those who think baby chick food prepared Pratts way costs anything extra should get the *facts.* They're in an illustrated book you ought to have; write for it; FREE from the PRATT FOOD CO., 312 Walnut St., Philadelphia.

Moyer POULTRY POWDER

PROFITABLE chickens are never sick. Diseases of poultry—65% of which are parasitic—must be stopped right at the start.

Thousands of poultrymen keep their flocks healthy and productive by feeding regularly twice a week, a small amount of Moyer's Poultry Powder. By doing this, they put vim and vitality in their birds and nip diseases in the bud. Feed it against occurrence of roup, limberneck, black-head in turkeys and similar parasitic diseases and watch egg records climb.

Like all Moyer products, this powder is free from filler. It is active, every bit of it. To absolutely prove its value a special trial package of 5 lbs. will be sent for $1.25.

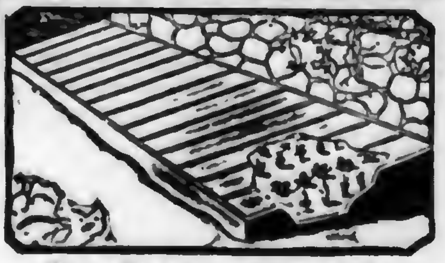
GLASS CLOTH

Greatest Discovery Ever Made for Poultrymen and Gardeners

Build a Scratch Shed with Glass Cloth Roof right onto your poultry house.



Baby Chicks Grow Faster—Hens Lay All Winter

A Glass-Cloth covered scratch shed gives chickens balmy June weather conditions indoors, during zero months. Hens lay more eggs. "Paid its cost ten times over," writes Iowa farmer, "by giving extra light and warmth for young chicks and laying hens. Greatest thing I ever heard of. Better than glass and cheaper, too."

Fine For Young Chicks

They grow faster, healthier and feather out into plump frying size several weeks earlier. Protected from storms, spring rains, dampness, etc. No cold drafts or outdoor chill.

Prepaid Prices by Mail

Single yd. 50c. 3 yds. at 42c, 10 yds. at 38c, 50 yds. at 35c, 100 yds. at 33c. Add 3c per yd. outside U.S. Prices F. O. B. Bladen. 200 yds. at 28c, 300 yds. at 27c, 400 yds. at 26c, 500 yds. at 25c. 1000 yds. at 22c. 100 yds. weighs 40 lbs. All 35 inches wide.

Turner Bros. Dept. 185 Bladen, Nebr.

Sent on Ten Days' Trial

Raise Plants and Vegetables Under Glass-Cloth covered hot beds or coldframes. Have these luxuries for your table—or to sell—weeks before the regular season. Many claim Glass-Cloth grows them better than glass. There is big money in raising plants to sell.

Mail the Coupon Today

Big 15 yard roll, 35 inches wide, (will cover scratch shed 9 x 15 feet) mailed prepaid on receipt of $5. 6 yards (54 sq. feet) for $2.25. Use ten days, if not satisfied return and your money will be refunded. Common sense instructions, "feeding for eggs," with every order.

Turner Bros., Dept. 185
Bladen, Nebr.

I enclose $......... and ask you to send me by prepaid parcel post the roll Glass-Cloth mentioned in your advertisement for this amount, with understanding that if I am not satisfied after using it for ten days, you will refund my money upon return of Glass-Cloth.

Cholerine Will Save Them!

The lives of baby chicks—so profitable to you—literally hang by a thread the first eight weeks. You can save yours. Give them Cholerine in drinking water and those dread diseases, Roup, Cholera, and White Diarrhea will be wiped out before they start.

Cholerine is an unexcelled year 'round tonic for hens, prevents diseases, cleans out the intestinal tracts and glands, strengthens digestion, increases appetites and peps up egg production.

There's hardly a big poultry feeder or shipper in the country who doesn't use Cholerine 365 days in the year. Cholerine, used according to directions, is absolutely guaranteed to give satisfaction or your money is refunded.

See Your Merchant

for a sample of Cholerine today. If he hasn't Cholerine, send us his name. We'll supply you.

Don't wait until death grips your chicks. Use Cholerine first.

FOR FOWLS

When the Baby Chicks Come

Some Ways to Prevent Losses in the Brooder House

By R. G. KIRBY

FOR successfully brooding early hatched chicks I find the coal burning brooder stoves satisfactory and more useful and less work than a lot of mother hens. During windy and snowy weather the hen must constantly hover the chicks or they are chilled. She cannot stand up to eat without dumping the brood over the cold ground where they will stand and shiver until hovered again.

The chicks in the colony house heated by the coal burning brooder stove are never subject to unpleasant exposure if the stove is properly managed. The heat is always present when they need it. Regardless of the outside weather the brooder chicks can exercise and scratch in an atmosphere which is comfortable.

The Best Brooder Fuel

The best fuel for the brooder stove is chestnut hard coal. It burns for a long time and retains an even heat. Solvay coke burns too rapidly and there is danger of the fire dying out before morning, especially on a windy night when the stoves may burn the fuel quite rapidly in spite of the regulation of the thermostats. I have used hard coal and Solvay coke mixed but it did not give as good satisfaction as chestnut hard coal.

Brooding with soft coal is rather difficult because the chicks need an even heat and the heat from soft coal is more difficult to regulate in a brooder stove.

It pays to operate the brooder stove in a colony house far enough from large buildings to reduce the fire risk. The stoves are as safe as the heaters used in a house but where there is fire there is always some risk and this can be reduced by confining the brooder stoves to small buildings placed at least fifty feet from each other.

Six Feet Enough Stove Pipe

Do not use too long a stove pipe on the brooder stove. It increases the draught and makes the fire burn faster. I can obtain plenty of draught with a six-foot stove pipe. It takes about three feet to reach from the top of the stove to the flange on the roof. This should be in a separate section. Then the stove can be set up rapidly and removed easily when the chicks are ready for the roosts.

Shove the section of pipe up into the flange and then down on the stove and it is ready for the fire. The second three-foot section with the cap to keep out rain fits down over the flange on the roof. Be sure that the flange is sealed tightly to the roofing paper to avoid leaks. A leaky roof around a brooder house stove pipe may cause water to run down into the stove and put out the fire on a wet stormy night. Even a small leak which allows water to trickle down the pipe and over the stove will cause the brooding equipment to become encrusted with dirt and rust.

Start the fire the day before the chicks are placed under the hover and then you have a nice even bed of coals and plenty of heat to protect the chicks. The thermostats can be regulated and no experimental work will be necessary after the chicks are in the brooder house.

Keep Out the Clinkers

The first week a brooder house stove will usually work all right. Then the beginner may become careless and allow ashes to bank up around the sides of the stove. Possibly a large clinker will start to hold back the ashes. When the stove is shaken down a lot of ashes will appear but not enough of them. About the beginning of the second week the fire may die out some cold morning and then the poultryman will find a lot of huddling chicks and many dead ones.

The preventive remedy consists in shaking down the ashes morning and night until the firelight shows thru the grates. When the stove is constantly filled with coal you cannot see if the fire is burning clear across the grates. So allow the coal to burn toward evening until a fine large bed of coals is visible clear across the fire pot. Then you know there is a good fire in the stove. When the hod of fresh fuel is added there is practically no danger of such a fire dying out before morning.

Occasionally take a long poker and stir the bed of coals and remove any clinkers that may have formed. Most poultrymen use the brooder stoves for incinerators for any chicks that die. This is sure destruction for the germs that may have killed the chicks and adds bone ash to the coal ashes which can be fed back to the chicks. But the burning of the chicks sometimes seems to encourage the forming of clinkers.

Chicks Need Sunshine

It is known that window glass filters out the violet rays which are needed to stimulate the growth of young chicks. Arrange the windows in the colony houses so they can be opened on clear bright days. The sunshine on the brooder house floor will help to prevent leg weakness and other chick diseases.

With a coal burning brooder stove you can obtain plenty of heat to protect the chicks even when the brood-

(Continued on next page)

Treatment for Leg Weakness

I have some chicks about three weeks old that seem to have weak legs. When they try to walk they fall over backward and spread out their wings. I feed them ground wheat and corn and house them in a large box with dry ground in one end, and straw. Please tell me what to do for them.—S. C. G., Cumberland County, Pa.

Leg weakness in chicks can usually be prevented in the following ways. Allow the chicks to scratch in the direct rays of the sun. Sunlight thru glass is not the same as the violet rays which influence a chick's growth are filtered out by the glass.

Place crude cod liver oil in the dry mash at the rate of a pound to 100 pounds of the starting mash. Do not use the cod liver oil emulsion. It will not give the same results as the raw or crude cod liver oil.

Developing Sturdy Legs

Cut clover sods and place them near the brooder. Scratching in the moist soil seems to help in giving chicks sturdy strong legs. The fresh green feed that sprouts from the sods is beneficial. Sprouted oats and sour milk contain vitamins and improve the vigor of chicks. I think you will find one of the commercial dried buttermilk starting mashes a good investment to carry the brooder chicks beyond the danger period.—R. G. K.

Galvanized **FENCING!** PER ROD 23¢

Hog, Poultry & Field Fence at America's Lowest Prices

Here's your chance to buy strong, heavily galvanized hog, poultry and field fencing at a big saving. A timely purchase from one of America's leading fencing factories brought us a large quantity at big price reductions from the regular markets. All kinds in all heights to choose from.

When the Chicks Come

(Continued from page 14)

r house windows are open. Have he stove towards the back of the ouse to one side. Then the chicks an come up toward the window and xercise in the sunshine and cool air. Whenever they feel cold they will reurn to the stove and under the hovr there will be plenty of warmth.

Remedy for a Common Trouble

When the chicks are first placed nder a hover they must be confined here. This will prevent the flock rom following the sunshine and uddling in the light even tho it ontains little warmth during winter eather. Sometimes most of the hicks will start piling up in the orners of the house, especially at ight when they become lost and onfused.

The remedy is to have a strip of ardware cloth about a foot wide and ong enough to stretch around the rooder stove about a foot from the dge of the deflector. This chick proector takes a lot of worry out of e early chick raising. You know e chicks are near the source of the eat and do not have to run conantly to the colony houses to find everything is all right.

Use a Flashlight—Not a Lantern

After three or four days the strips n be rolled up and stored until ey are needed for more chicks. I d that the chicks usually learn e source of the heat in about four ays and then they run back to the over whenever heat is needed. hen examining chicks at night alays use a flashlight instead of an l lantern. Flash the light on and rapidly and the chicks will not ve from their places about the ver. If you take a lantern into e brooder house they can see the tire house and may scatter beuse of fright into distant corners of e house. If they stay there all ght it may mean a lot of chilled d dead chicks.

Potato Wart Bulletin

HE first publication to be issued by the Pennsylvania Bureau of ant Industry on the potato wart sease which has been found in 813 rdens located in towns and villages eleven counties, is just off the ess.

It is a twenty-eight-page, illustrat- bulletin describing the disease, present state quarantine, potato rieties susceptible and immune to disease and progress in control of sease. The bulletin was prepared R. E. Hartman and W. A. McCub- . Copies can be secured by writ- to the Pennsylvania Department Agriculture, Harrisburg.

Sixth Potato State

ENNSYLVANIA'S potato production in 1924 reached a total of ,792,000 bushels as compared with 145,000 a year ago according to eral-state crop reporting figures. y five states.—New York, Minnea, Maine, Wisconsin and Michi-.—produced more spuds than sylvania last year. Only eight cent of the 1924 Keystone crop unfit for food or seed as comed with eighteen per cent in Wisin, thirteen per cent in Minnea, and nine per cent in New York, ne and Michigan.

The quality of the potatoes apr to be above the usual average. estimated that sixty-eight per of the Pennsylvania crop graded S. No. 1, as compared with sixtyper cent a year ago and seventy cent in 1922.

OBERCO [PROTEIN-MINERAL FEED] for Hogs, Poultry & Dairy Cattle

Poultry, swine and dairy cattle must have protein and minerals if they are to get the best from their farm ration. Mix Oberco with the feed you are using and see the difference.

Write for details. Practical poultrymen, hog raisers and dairymen have tried Oberco and it has produced surprising results. Write for booklet.

Save *work* · Increase *profits* *by using* Fairbanks-Morse Products

FAIRBANKS, MORSE & CO. has been studying the needs of the farmer for over 60 years—actually finding out what type of equipment best fits the farmer's requirements. Those 60 years have been spent in improving the quality and lowering the prices of Fairbanks-Morse Products. Today, over a million farmers are using Fairbanks-Morse farm power equipment because it is the finest, most practical and lowest-priced line of its kind on the market.

These farmers base their judgment on what Fairbanks-Morse Products actually do for them. It's a question of getting the biggest value for the money. Every product described below will help to reduce the hard work on your farm and will enable you to make more money from farming.

See the local Fairbanks-Morse *authorized* dealer for complete information. Mail the coupon for latest descriptive literature.

"B" Feed Grinders

Grind grain mixtures as well as any single grain. When grinding plates are worn on one side they can be turned and used again. Non-bridging hopper, safety flywheel, cutting knife adjustable from outside—extreme simplicity assures long life.

Prices

No. 4 .... $11.00
No. 8 .... 40.00
No. 10 .... 55.00

Cash f. o. b. factory

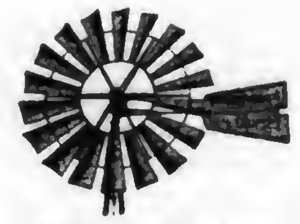
Home Light and Power Plants

Both electric light and engine power from one plant at one cost. Engine power is available at belt pulley while battery is being charged. Engine power alone or electric light alone at any time. Double utility at one low cost.

Prices

No. 1½ Plant $325.00
No. 3 Plant $525.00

Cash f. o. b. factory



Steel Eclipse Windmills

All parts are completely enclosed and run in oil. Cut pinion and worm gear eliminate many parts. Crankshaft is drop forged. All working parts machined to close limits. Simple, all-metal construction—built for a lifetime of service. Self-regulating. Quick down stroke, slow lift—actual pumping two-thirds of the time. Wheel is tilted to take advantage of slightest wind. Sizes: 8 ft. and larger.

Other Fairbanks-Morse Products are washing machines, electric motors, a complete line of general service pumping equipment, pump jacks, power heads, etc.

Home Water Plants

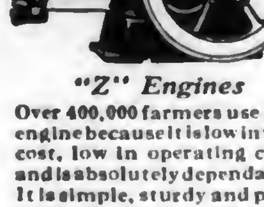
At an extremely low cost you can have water under pressure—hot or cold—in bathroom, kitchen, laundry, barn, watering trough—wherever you want it. The Fairbanks-Morse Home Water Plant operates automatically. There is an outfit to draw water from cistern, spring, shallow well or deep well.

120 gallons per hour capacity pump, 60-cycle motor, 8-gal. galv'd tank, complete $84.75

200 gallons per hour capacity pump, 60-cycle motor, 35-gal. galv'd tank, complete $115.00

Also larger sizes, for engine or electric drive, correspondingly low priced.

Prices quoted are cash f. o. b. factory



"Z" Engines

Over 400,000 farmers use this engine because it is low in first cost, low in operating cost, and is absolutely dependable. It is simple, sturdy and powerful. Has high tension battery or magneto ignition; suction fuel feed; positive lubrication; renewable die-cast bearings; parts subject to wear are hardened and ground; crankshaft, connecting rod and camshaft are drop forgings. More drop forgings and specially heat treated parts are used than in any other engine of this type. Highest quality obtainable—at the lowest price possible!

NOTE TO DEALERS
Fairbanks, Morse & Co. has a new sales plan that offers greatly increased opportunity to dealers in open territory. Write for details.

-for Speedier, Cheaper Gains

FINANCIAL AND WORLD MARKETS
FIRST $17.00 LAMBS HERE SINC SPR
First $17.0 lambs sinc last made an ap arance toda when 80-lb fed esterns fro Har county, Iow reached tha mark. Smith was the owner d feed the band, which cost $1 25 abo days ago, hen they av aged These la bs were first turned soy beans and alfalfa for about weeks and then fed she ed corn falfa hay d a quarter a pound linseed oil meal daily. n enorm amount of soft corn is g ng to w through feeding without il meal, says. It has proved muc cheape his case to add the me than corn alone at the present prices. Smith has topped the market sev times this year.
W. C. Holm, Clinton county, Iowa, was here today with a load of 1297 lb Herefords, which sold to Wilson at $11.25. These steers were choi quality fleshy steers when purcha d last September at $8.40, according Mr Holm. He put them on full feed for 69 days, giving them corn, linseed oil meal and molasses feed. He said that they gained around 4 lbs per day during that period.

KUNTZ YEARLINGS TOP MARKET AT $11.00 TODAY

L. P. Kuntz, a successful young feeder of Monroe County, Mo., had the distinction of topping the cattle trade here today with 22 long yearlings averaging 1095 pounds at $11.00 per cwt., Armour & Co. being the buyer. According to Mr. Kuntz these were native Monroe beeves, mostly Herefords and Angus that he picked up as calves last summer, paying around $8.00 per cwt. He fed them corn and sheaf oats through the winter also giving cowpea hay They were finished on corn and linseed meal on grass. Mr. Kuntz says that corn is better than an average crop in his section. The Kuntz yearlings showed choice finish.

Market reports tell the story. Not alone do live stock fed Linseed Oil Meal top the market, day after day, but they do so for less money in less time.

Adding Linseed Oil Meal to the ration costs so little and brings in such good gains that you simply cannot afford to miss this source of extra profit.

A sufficient supply of protein — an *excess* supply — is the key to your feeding profits. It has been proven time and again by the most practical experiences and experiments. Linseed Oil Meal supplies this excess very profitably—and in addition is a safe and splendid conditioner.

Just how, when, and why to feed it for the best and cheapest gains in fat, milk, pork and wool, is told fully in Prof. Morrison's book, "How to Make Money With Linseed Oil Meal." Written by one of the world's greatest feeding authorities, you'll find this book mighty valuable.

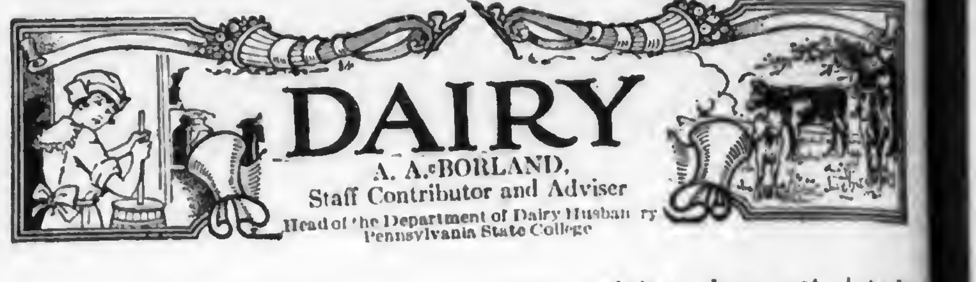
Balance the Ration With Linseed Oil Meal Costs Little, Earns Much



DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Value of Sweet Clover

Is there as much feeding value in sweet clover as in red clover? I have eight acres of wheat that I would like to seed to sweet clover. One of my cows was knocked over the fence by the other cows late in the fall while out in the pasture. Ever since she has been lame in one hind foot. The foot isn't swollen and appears normal except for one small sensitive spot.—J. B. L., Perry County, Pa.

Cows do not like sweet clover so well as red clover. They have to learn to like it. For hay it should be cut before the stalks get coarse and woody. Like alfalfa, when once established it stays in the ground longer than red clover.

The actual analysis of sweet clover shows that it is somewhat higher in feeding value than red clover. The latter contains 12.8 pounds of crude protein per cwt., while sweet clover contains 14.5. Red clover contains 7.6 pounds of digestible protein while sweet clover contains 10.9 pounds. The total digestible nutrients per hundred pounds in each of these clovers is practically the same.

Rate of Seeding

When sown in grain, twelve to fourteen pounds of scarified sweet clover seed is usually recommended. When unhulled seed is used, this amount should be nearly doubled, but such seed is not recommended, save possibly for late winter sowing.

Sweet clover and alfalfa employ the same nitrogen gathering bacteria and the seeds should be inoculated with commercial bacterial culture for this purpose before sowing. This may be secured from seed houses, or can be secured directly from the bacteriology division of the Dairy Husbandry Department at State College.

I believe the best procedure concerning your cow which was injured would be to have a competent veterinarian examine her and try to locate the direct source of the trouble.—A. A. Borland.

About Colostrum Milk

Does the milk a cow gives three months before calving interfere with making butter; is the milk during the same period all right for use in the house; is the milk when she has calved good to use in the house, or for making butter?—C. A., Chester County, Pa.

The milk a cow gives three months before calving does not interfere with making butter even tho she has been milked for a long time. It is not desirable to have a cow milked right up to the time she freshens. She should be dry at least six weeks before freshening. The milk ought to be all right for household purposes up to the period six weeks before freshening when she should ordinarily be dried off.

Right after the cow freshens the milk is not supposed to be desirable for household purposes for a few milkings. This first milk is commonly known as colostrum. It possesses laxative properties which make it especially desirable for the new born calf.

The colostrum is acrid, viscid, very yellowish, is much heavier than milk, and has an alkaline reaction. It contains less casein and sugar, but more ash, and many times more albumin than normal milk. The true milk flow is usually considered to be established by the sixth to tenth milking. Most people figure that the ninth milking is sufficiently normal to be used for household purposes.—A. A. B.

Cannot Raise the Test

Will you give me a formula for a ration I can feed my herd of seven cows to raise the butterfat tests as high as possible? My test for the first fifteen days of January was 3.4. I am feeding a mixture of three parts corn and cob meal, two parts gluten, one part thirty-four per cent oil meal and one part ground oats.—M. J. S., Lehigh County, Pa.

So far as experiment stations have been able to find out there are no feeds which will permanently increase the butterfat percentage in milk. This is settled by the individuality of the cow and the breed. The average Holstein cow yields milk testing about 3.4 per cent butterfat; Brown Swiss and Ayrshires yield milk testing approximately 4 per cent; Guernsey milk usually tests about 5 per cent and Jersey milk about 5.4 per cent butterfat. Of course, certain cows in each breed vary considerably from the average for the breed.

Ration Too Low in Protein

In other words there is no feed which you can give a Holstein cow which will make her give milk testing as high in butterfat as the milk from a Jersey cow. The only way to get more butterfat from the cow is

to get more milk from her. The increased yield of milk will contain as high a percentage of butterfat as the low yield.

The ration which you are feeding could be improved considerably from the standpoint of economy and milk producing power. Corn and cob meal at the present prices of grain is a pretty expensive feed considering its food value. Furthermore your ration as it stands at present is too low in protein to make a well balanced ration unless your roughage is composed entirely of clover or alfalfa hay.

I believe you would find a grain mixture such as the following to be conducive to a higher milk yield. Equal parts by weight of corn and cob meal, gluten feed, ground oats, linseed oil meal and cottonseed meal. This mixture will go very nicely with clover hay and corn silage for roughage, feeding the grain at the rate of one pound of grain to every three to three and one-half pounds of milk for Guernsey or Jersey cows, and one pound of grain to every four to four and one-half pounds of milk for Holstein or Ayrshire cows.—A. A. B.

Peanut Bran for Cattle

Is peanut bran satisfactory as a feed for dairy cows, to be used with cottonseed meal, oil meal, gluten and cob corn meal? How about its digestibility? How would it compare with wheat bran?—P. M., Montgomery County, Pa.

Peanut bran used for the State College herd has been fairly satisfactory. It makes a fair substitute for wheat bran. It contains more digestible protein than wheat bran, likewise its digestible fat content is higher than that of wheat bran. Since the market price is lower, it makes a fairly economical purchase.

The amount to use would depend on your roughage and what other grains you had available. If your roughage is clover hay and corn silage, then a mixture of 100 pounds of corn and cob meal; 100 pounds of peanut bran; 100 pounds of linseed oil meal; 100 pounds of cottonseed meal, and 100 pounds of gluten feed would make you a good mixture.

Feed at the rate of one pound of grain for every four to four and one-half pounds of milk produced by Holstein or Ayrshire cows, and one pound of grain for every three to three and one-half pounds of milk produced by the Jersey or Guernsey cow.—A. A. B.

Ration for Fresh Cows

I would like to have you suggest a good feed for cows that have freshened. I have corn and bran, and I can get buckwheat middlings, cottonseed meal, oil meal, and gluten feed. How much protein does buckwheat middlings contain? My roughage is corn stalks, alfalfa and good timothy. How much is manure from each cow worth per day, when fed all the above mentioned feed they will eat?—N. E. Erie County, Pa

With the roughage you have, that is, corn stalks, alfalfa hay and timothy hay, the following grain mixture should be satisfactory: 100 pounds of buckwheat middlings, 100 pounds of corn meal; 100 pounds of wheat bran and 100 pounds of linseed oil meal. Buckwheat middlings contain 28.3 per cent of crude protein. The digestible protein runs about 24 per cent if the buckwheat middlings are of good grade without any hulls in them.

According to Henry's "Feeds and Feeding," the annual value of the manure from a cow weighing about one thousand pounds is $36.51. This is about ten cents per day.—A. A. B.

A 300 Pound Cow Club

WHILE Pennsylvania has her 400 Bushel Potato Club and her Keystone Ton Litter Club, she is still a step behind the state of Indiana which has a 300 Pound Cow Club.

Membership in the club is open to dairymen in Indiana having a herd of at least ten cows producing 300 pounds of butterfat or more during the year. Official or cow testing association records form the basis of awards. Three medals are available. If ten cows produce 300 pounds of butterfat each during the year, a bronze medal is awarded. If, however, eight of these cows produce 400 pounds each, the medal is a silver one, while a gold medal is awarded if six of the ten cows produce 500 pounds of fat during the year.

A comparison made by dairy specialists at Purdue University between the 300-pound cow and the average cow (about 170 pounds of fat) in 1923 shows the much greater profit was received from the higher producing cow. Altho it cost $33.87, or sixty-five per cent more, to feed the higher producer, she returned $116.57, or 338 per cent more profit after paying for her feed than the poorer cow.

Louden,
Fairfield, Iowa.
Gentlemen:
After using for 3 years the barn I built from your suggestions and plans I cannot see where I could make one change that would make it more convenient.
It is the only thing I ever built in which I did not see some mistakes about the time I got it built. Certainly if I ever build another barn I want the Louden folks to help me plan it.
Yours truly,
L. M. Waggoner

Save Money Two Ways
When You Build or Remodel *Your* Barn

On the average farm, once in twenty-five years perhaps, a new barn has to be built or the old one remodeled—hence like most farmers your barn building experience is probably limited. Possibly too, you've waited several years to get at that building or remodeling you're now figuring on doing this spring. But regardless of all this, one thing is certain—you want to save *every* single unnecessary expense and, at the same time, get the very *best* barn possible for the money. That's exactly what the Louden Barn Plan Department, established by William Louden years ago, is here to help you do.

Profit by this Plan Service

More than 15,000 barn owners have profited in two ways from the suggestions and plans freely given them by Louden Barn Plan Experts. You too, can do the same, for the carefully worked out plans such as they will suggest, show you how to use lumber that will cut with little or no waste—how to avoid expensive changes after the building is under way—how to use short cuts that will greatly save carpenters' time, etc. But of still greater importance, they will show you how to get a completed barn so ideally arranged that it will save you hundreds of hours of time and labor every year as long as you use it.

Day after day, year after year, the Louden Barn Plan Department has studied, planned and observed every phase of barn construction. Thus it has become the leading authority on barn building. This vast accumulated fund of knowledge, together with the benefit of our 58 years' experience in solving every sort of barn problem imaginable, which we have gained in building the old, reliable line of Louden Barn Equipment, is yours for the asking. These plans—these valuable suggestions will save you money in building or remodeling *your* barn.

Simply tell us the number and kind of stock you want to house—and any other special requirements you may have—let us know when you desire to start erection. We will immediately send you absolutely free of any charge or obligation a suggestive plan with blue prints to fit your particular needs. Don't delay—write us at once.

Send for Louden Barn Plan Book

This valuable book illustrates and describes different methods of framing, types of roofs, shows mow capacities, tells about concrete work, explains ventilation—112 pages of practical building information on barns. A copy sent free, postpaid, to any farmer who is figuring on building or remodeling a barn or hog house. Fill in the coupon and mail it today.

A Cow is as good as her Udder

NO matter how good the general scaling points of a cow, the udder and teats will always be the key to her profit-making value. It pays to watch carefully these delicate tissues and keep them free of the slightest disorder.

Let Bag Balm be the guardian of the "profit-zone" of your cows. This great healing ointment gives quick results in clearing up chapped or cracked teats, cuts, bruises, inflammation, bunches, Caked Bag—or any abnormal condition of udder or teats.

Keep Bag Balm on hand the year round. It will prove the best investment you ever made. Big 10 ounce package, 60c—at general stores, feed dealers, druggists. Order direct if dealer is not supplied.

What Two Pennsylvania Farmers Did

Two Pennsylvania farmers having ordinary grade cows, who feed Ti-o-ga Dairy Feeds as directed on the tag and keep careful records report the following results:

One feeder reports—

Milk and Calves for one year sold for	$2,803.32
Ti-o-ga Dairy Feed used cost	827.87
Gross profit without deducting value of roughage used	$1,975.45

Ti-o-ga Dairy Feed was the only grain used.

The other feeder reports—

Milk and Calves from Sept. 12, 1923 to May 24, 1924 sold for	$2,576.91
Red Brand Ti-o-ga Dairy Feed used cost	570.00
Gross profit without deducting value of roughage used	$2,006.91

Red Brand Ti-o-ga Dairy Feed was the only grain used.

These results are plain facts.

Ti-o-ga Dairy Feeds enabled these men to make a profit on their cows. We wish you would follow their example and let us increase your profits with Ti-o-ga Dairy Feeds.

Red Brand Ti-o-ga Dairy Feed to be fed with low protein succulent roughage; Silage, Pasturage, Green Fodder, etc.

White Brand Ti-o-ga Dairy Feed to be fed with medium protein dry roughage; Timothy Hay, Mixed Hay, Corn Fodder, etc.

Blue Brand Ti-o-ga Dairy Feed to be fed with high protein dry roughage; Clover Hay, Alfalfa Hay, etc.

If your dealer can't supply you, write us.

TIOGA MILL & ELEVATOR CO. Waverly, N. Y.

RED BRAND WHITE BRAND BLUE BRAND

Use the TI-O-GA Dairy Feed which forms a balanced ration with your own roughage.

TI-O-GA FEED SERVICE

You Don't Need A Pile of Money

Every Cow—Hog—Hen Farmer Can Use *JAMESWAY* Plans and Equipment

You'll be surprised at how little it costs to own and enjoy a Jamesway equipped, work-saving dairy barn, a sunny sanitary hog barn, or a comfortable, ventilated poultry house to increase your earnings. Write and get our Jamesway "Pay from Earnings" Plan on stanchions, stalls, carriers, water bowls, etc. As little as $10 to $12 per month will give you the finest dairy barn equipment you could want on this plan. And think of the increased earnings, shortened hours of labor, and a more pleasant place to work in!

Equip your hog barn and poultry house on same plan. Think of only $6.00 or $8.00 per month and increasing your egg profits with feed saving, metal self-feeders, waterers, self-cleaning metal nests. Also complete ventilation system. Hens can't help but lay more eggs in such a poultry house.

Our New Jamesway Book Sent FREE—

will tell you how you can have these advantages. Also tells how increased earnings soon pay their cost—and yield clear profits afterwards. If building, or remodeling, be sure to get Jamesway plans first. Our local Jamesway man will be glad to call and help you. Write today and mention how many cows, hogs, chickens, etc. you keep.

The Jamesway Book

This New Book Will Tell You—

- How to get a good dairy barn.
- How to remodel an old barn.
- How to get good ventilation.
- The Essentials of a Good Cow Stall.
- How to give cows pasture comfort in a barn.
- How to judge a stanchion.
- How to feed cows for profit.
- How to insure "safety first" with the bull.
- How to make the cleaning job easy
- How to water your cows in the barn.
- How to have better hogs and bigger litters.
- How to make more money from your hens.
- How Jamesway "Pay-from-Earnings" plan pays for your equipment as you use it.
- And many other helpful pointers on cow, hog and hen problems.

State's Agricultural Needs

Farm Council Reports to Legislative Commissi

THE State Council of Agricultural Associations, representing twenty-six farm organizations in Pennsylvania, has made its report to the members of the Legislative Commission appointed to study agricultural conditions in this state.

The following is a brief statement of the recommendations carried in the report:

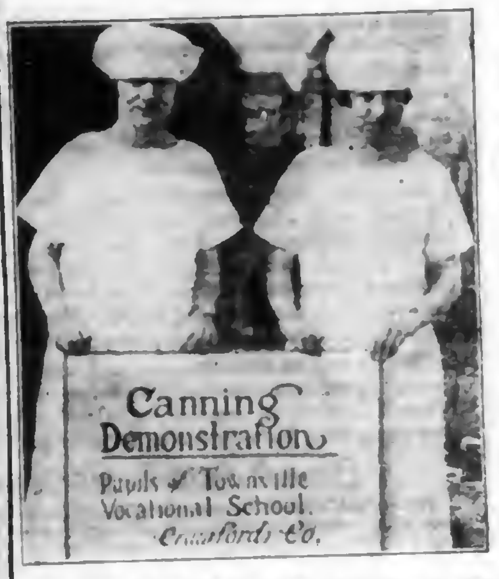
That $2,000,000 be appropriated for indemnity purposes in bovine tuberculosis eradication for the next fiscal period, June 1, 1925, to June 1, 1927.

That the 1923 general appropriations act be amended so that the $300,000 limit for indemnities will be removed and the unexpended balance in the dog fund be made available to pay indemnity claims.

That any increase of indemnity appropriation be supplemented by a proportionate increase in appropriation for maintenance.

That $15,000 be appropriated to the Bureau of Animal Industry to maintain poultry disease work in a satisfactory manner.

A Canning Team



Canning Demonstration
Pupils of Townville Vocational School.
Crawford Co.

Bernita Clark and Irma Shaffer, of the Townville Vocational School, Crawford County. They staged a canning demonstration at the Penna. Farm Products Show, directed by their teacher, Miss Grace Fitts.

That two additional fieldmen be added to the state meat hygiene work.

That the present meat hygiene legislation be amended or new legislation be obtained looking to the licensing of slaughtering establishments.

Should Meet Needs of State College

That the full amount of $355,746, which the state college requests for agricultural research work, should be appropriated.

That the agricultural extension work of the college should continue to expand at least to the point where state support will match federal support.

That the requests for $300,000 for a new botany unit, $150,000 for a horticultural greenhouse, $500,000 for a dairy building and $32,000 for expanding the poultry equipment, in the State College budget should be granted.

Recommend Study of Farm Taxes

That the present so-called emergency taxes be re-enacted because the revenues these taxes produce are needed to finance adequately the state government.

That an amendment to the Constitution of Pennsylvania be made to permit the grading of inheritance taxes.

That some agency of the state ernment be given an adequate ap priation to compile figures on taxation in a complete and com hensive way, in order that the may know the facts with reference this matter.

That the State Department of A riculture be authorized to make special study of taxation on property and that an appropriation granted for that purpose.

The Council explains that, with large urban population and the lions of tourists passing through state,conditions are developing un which farms in all parts of the are subject to a great amount trespass. In order to remedy situation the Council recommends passage of a trespass act which w make it a misdemeanor for any pe to willfully enter upon any land the purpose of hunting, trapping fishing, or taking away anything longing thereon, without the co in writing of the owner, when pr notice and warning is given by owner. The law would require owner to give warning to the pu by the posting of a notice pri upon a card, nine by twelve inches, each entrance to the property. Pe ties are provided ranging from to $50 in fine, with cost and pay of actual damage resulting to property.

State Responsible for Deer Dam

The Council points out that effective work and policy of the G Commission in protecting and incr ing wild life has been so succes that in certain sections of the st deer have increased to the point wh they are highly destructive. A w careful study of the question has b made by a committee selected by State Horticultural Association the Council, and it made these reco mendations: (1) That the conser tion of wild life in Pennsylvania heartily indorsed; (2) That since d and other wild game are owned protected by the state, the state responsible for damage done to pri property by such game, and sh either prevent or compensate for damage done. (3) That such legi tion be enacted as will enable proper executive officials of the C monwealth to carry out this resp sibility.

Difficult to Reduce Taxes

The committee on taxation pointed by the Council concludes report with the following state "With the people demanding be schools, better roads and a lar measure of service from all sorts public agencies, there is little h of reducing taxation in the aggre But much may be accomplished equalizing taxation, and substan relief in this direction is one of foremost demands of farmers home owners in Pennsylvania."

A resolution on rural electrifica was prepared and passed by the Co cil, calling attention to the need extending electric power where feasible into rural districts at a r sonable rate.

The Council recommends the en ment of legislation creating an em gency fund to meet contingencies cannot be foreseen, such as foot mouth disease and other plant and mal menaces.

COMPLETE ELECTRIC OR STANDARD EQUIPMENT $87.79

FORDS MILKER

$87.79 $87.79

Fords Milker—at new amazingly low price, $87.79, highest quality guaranteed—is an opportunity whether you own two cows or fifty. Simple and trouble proof. Built with every latest improvement, the result of 14 years' experience—and absolutely guaranteed!

GUARANTEED

It is a single or double unit machine. Works as fast as two men—at a fraction of the cost. Does not irritate cows. Operates exactly like hand milking, a complete vacuum release with each pulsation. No puzzling mechanism—only two detachable parts to teat cups, three to valve chamber. Rubber valve trap assures airtight, dirtproof valve chamber. Your choice of electric milker (1/6 h. p. motor with electric) or standard equipment. Standard equipment will handle ten cows in single row. More shafting or rows at slight additional cost. Guarantee protects you. Should last twenty years.

Why We Sell at This Low Price, $87.79

Fords Milker saves you many dollars. You'd like to know how quality and performance are kept 100% and price almost slashed in two. Remember, guarantee with every machine. Get the facts. See your dealer or fill out the coupon—NOW. It costs nothing to learn the details of how 14 years' experience will save you time, labor and money.

Hydro electric Plant

I would like to know which would be the better and the cheaper after installation, the electric current from a high tension line or a water power plant? This plant would serve a community of about twenty homes. There must be places where a second hand generator could be secured. I would be glad for any information you could give.—M. S. B., Somerset County, Pa.

This is a question which I would not attempt to answer definitely without knowing a great deal more than I do about the entire problem.

Public utility companies have as many different systems of installing and charging for installations as there are companies. Some make the farmers pay for the lines and transformers while others have another system. Much will depend upon the local concern from which you contemplate buying the current. After the lines are all installed you have nothing to maintain and nothing but service charges to pay.

Maintenance Consumes Savings

On the other hand, if you install a water driven plant,—and you should first of all be certain that you have adequate power to take care of all requirements,—you must build all of your own lines and maintain them. The plant itself will require some attention and there will be some labor required for this work.

Of course, there must be some kind of a division of expense. You will need funds for maintaining the lines, and while you might not be paying anyone else a profit, you would probably find that it was costing you as much or more in the long run.

I certainly would not recommend any second-hand equipment for such an installation. If you require only lights now, you will soon find that some of your consumers will want to use current for power and before long your equipment would be inadequate.

I believe that it would be best to hook onto the high tension line and get guaranteed service. No one who has not been a party to building and maintaining a co-operative electric line knows just how much grief there is connected with such an enterprise. Very few farmers are qualified to plan or lay out an installation, while the utility companies usually hire an expert in that line and farmers are then given the benefit of this man's services.—Frank A. Meckel.

College Grange Active

THE Penn State Grange, having about 150 members, including students and faculty of the School of Agriculture, is one of the many active organizations at the Pennsylvania State College. At a recent meeting, Dean R. L. Watts, John Dale, well known Granger, and F. L. Stump were appointed to the legislative committee. Arrangements are being made for a banquet to be held March 27. Grange Master P. H. Dewey, guest of honor at the banquet, is scheduled to deliver the main address of the evening. The Penn State chapter is contributing $80 to the Penn State Grange Memorial Fund which will be used in the construction of a new $250,000 girls' dormitory.—A. L. B.

"What in the world did you mean by introducing me to Mr. Brown as your aunt?" inquired the mother with some warmth.

"Forgive me, mother," said Dorothy, "but Mr. Brown seemed to be on the point of proposing and I felt that it would not do to take any risks. He has a strong prejudice against mother-in-laws."—Pittsburg Chronicle-Telegraph.

Check Your Feed Cost BY THESE 3 Sure Easy Ways

A By the Milk your cows put in the pail day after day.
B By health conditions—better development of heifers and calves.
C By the profit in money and saving in time and labor.

Use these three ways to test your home mixed rations, or any feed you buy. You will *know* then, without puzzling your brain about proteins, percentages, digestibility, etc., what ration is best and most economical for you to feed. Sugared Schumacher Feed is proving "BEST and most ECONOMICAL" for thousands of dairymen and farmers. W. S. Kerr, Cohasset, Mass., writes:

From THE OAKS FARM Cohasset, Mass.

The Quaker Oats Co., Chicago, Ill.

"In Sugared Schumacher Feed you have a feed that *will prove very profitable to anyone* who gives this feed an opportunity to show what it will accomplish.

"We have been feeding it for nearly three months as the base of our ration. Visitors have remarked at the *improvement in general conditions* of our large herd of pure bred Guernseys. In addition to this, they have also shown *a large increase in milk flow.*"

Test Sugared Schumacher—check it by the "A-B-C" standards of *More Milk—Better Conditions—More Profit* and you will find it PROVES UP 100% as Mr. Kerr found. Write for free "Schumacher Feeding System" containing a dozen tried and tested dairy rations. Your dealer has Sugared Schumacher, if not write us.

Dept. 1654 Address: Chicago, U. S. A. D19

The butter-fat you *leave* in the skim-milk *won't* buy the baby any shoes

The loss of only 25 cents' worth of butter-fat a day costs you $91.25 a year—enough to keep the whole family well shod, and then some. Thousands of farmers have stopped the waste of much more butter-fat than that by replacing their cream-wasting separators with new, clean-skimming De Lavals.

Never in the history of centrifugal cream separators has there been a machine to equal the new De Laval—for clean skimming, easy turning or durability. It has the wonderful new self-centering bowl which runs smoother and easier, and eliminates vibration. It will give you more and a richer cream than you have ever gotten before.

Trade Allowance See your De Laval Agent or write us about trading in your old separator (any age or make) as partial payment on a new Improved De Laval.

New De Lavals sold on easy terms ranging from **$6.60 to $14.30 Down** the balance in 15 easy monthly payments

Young Pigs Ailing

I have raised hogs all my life and never had the trouble I am now having with my eight-week old weaned pigs. When I feed them they fall over just as if they were dead. They come to again in a few seconds and stagger around, starting to eat again. Not all of them do this. I am feeding skimmilk, heated on a stove and chilled to lukewarm, adding a pint of wheat middlings to a gallon of the skimmilk, and one handful of oil meal. When they clean up this I give a little oat chop and some corn on ear. I keep them in the barn where it is warm. Please tell me a good feed for these eight-week old pigs.

I am feeding a pen of twelve-week-old pigs on the same feed and they are doing fine; they weigh about twenty-five to thirty pounds. Thank you for your help.—L. M. R., Lehigh County, Pa.

The symptoms which your eight-week-old pigs show at feeding time are typical of pigs affected with worms. Your pigs will not do well unless they are given a systematic treatment

I would suggest that you secure some worm capsules from your local veterinarian. If you secure them from a qualified veterinarian, they will of high grade and effective. Di tions for using these capsules will included, or will be given you by veterinarian.

In addition to giving the caps it will be essential to clean th the quarters in which the pigs kept. If it is possible to give them clean lot to run in, your difficult will be more easily overcome than they are allowed to remain in same lot.

Ration for Young Pigs

A very good feed for young that have just been weaned con of a grain mixture of approxi 4 parts of corn, 3 parts of wh middlings, and 1 part of dige tankage or fish meal.

You can substitute the skim which you have for the tankage the ration, in which case feed a bination of 4 parts of corn, 3 of middlings, and allow 3 pounds the skimmilk for one pound of grain mixture. The corn may be as ear corn if it is not convenient shell it or grind it.

It is not advisable to feed the chop to young pigs except in limited amounts and then it is to sift out the hulls at least until pigs weigh approximately 50 pou —W. H. Tomhave.

Outlook for Swine Breeders

THE December 1st swine survey recently reported by the United States Department of Agriculture seems to indicate a much smaller production of hogs in the United States than has been the case for a decade. This survey shows a decrease of about twenty-eight per cent in the number of sows that farrowed during the fall of 1924 as compared with the number that farrowed in the fall of 1923.

The percentage of decrease in the number of pigs raised is not as great as the decrease in the number of sows that farrowed during the fall, being about twenty-eight per cent less than in 1923. The increase in the number of pigs per sow is, no doubt, due to the general hog situation which indicates a higher level of prices than has prevailed during the past two years.

Great Decrease in Corn Belt

The decrease in the number of pigs farrowed in 1924 is not confined to the fall crop of pigs as there was also a marked reduction in the number farrowed in the spring. It is estimated that in the Corn Belt alone there was a reduction of between eleven and twelve million pigs farrowed in 1924 when compared with the number farrowed in 1923. This reduction will result in fewer hogs coming to market during the winter and spring months.

The report states further that the number of hogs received on the central markets of the country during the last two months was practically as large as the number marketed during the same period in 1923. This condition was, no doubt, due to the short corn crop, as many of the hogs coming on the market were not as heavy nor as well finished as in 1923.

Indications are that the scarcity of market hogs will be felt during the winter and spring months.

The price received for hogs during the latter part of 1924 was higher than in 1923, and the price level maintained in spite of large rec This would indicate that there is large reserve of pork products in country.

With the reduced storage su of pork products and the redu in the number of hogs in the c try it would seem that hog p will be higher during the spring summer months. A higher price hogs will be necessary to keep production on a profitable basis the prevailing price of corn, mill factory by-products.—W. H. T have.

Machinery Lasts Long

RUST results from moistur air. Where there is plenty of the moisture dries and only a rust results. Hence it is in the ices that rust works overtime. large parts such as the levers frame of a machine are not da much by rust but the small such as catches, springs, nuts bolts do suffer.

Paint is the best means of ch ing rust action. A painted bolt hold longer and can be rem more easily than one allowed to The machine should be cleaned all dirt and rust before applying paint. Any kind of paint will but it is much better to use an mobile paint or one adapted to work. Paint all except scou parts and apply plenty of pain joints, corners, crevices bet parts, around bolt heads and The painting may be done during winter season when the machine not in use.—E. R. Gross, New J State College of Agriculture.

A Kansas man visiting in Fl got so warm that he decided to graph his wife for lightweight derwear, so he sent the follo telegram:

"S. O. S. B. V. D. P. D. Q"— Hamiltonian.

THE winter lay-off softens horses—makes them easy prey for strains, bruises and minor ailments. That's why it's important to keep Gombault's Caustic Balsam on your shelf—ready for instant use. For over 41 years it has been famous as a remedy for Sprains, Spavin, Splint, Capped Hock, Curb, Fistula, Thoroughpin, Shoe Boils, Poll Evil, Wire Cuts and Muscular Inflammation.

Apply it yourself. Just follow directions that come with bottle. Much better than firing and doesn't discolor the hair or leave the slightest scar. Don't let your horses suffer from something you can cure yourself. Buy Gombault's Caustic Balsam today. $1.50 at all druggists, or direct from us on receipt of price. IT SAVES MORE PIGS

The McLean County System Gets Results for Breeders

IN THE rapid expansion in the use of the system of swine sanitation, commonly known as the McLean County system, the swine industry is now undergoing one of the most important improvements in respect to disease prevention since the general adoption of the preventive treatment for hog cholera. Reports from various states in the Middle West indicate that this plan, which has for its main object the prevention of the large losses from roundworms and various filth-borne diseases of young pigs, is being adopted at an increasing rate.

The New System

The essentials of the McLean County system may be outlined briefly as follows:

The pigs are farrowed in pens that have been thoroly cleaned with lye and boiling water, and supplied with clean bedding. The sows before being put in the clean pens for farrowing are scrubbed with soap and warm water to free them of dirt which may contain eggs of roundworms and other germs likely to be abundant in the soil of permanent hog lots. Later the sows and litter are hauled (not driven) to clean pasture, preferably legume pasture, which has not been used for hogs since cultivation.

Until they are taken to pasture the sows and pigs are kept strictly in their clean quarters, and until the pigs are at least four months old they are kept on pasture entirely away from the permanent hog lot.

It Seems Fussy, but It Pays

Pigs started this way are protected from the danger of serious infection with worms and hog-lot diseases and get a strong advantage over those that must take their chances with the ever-present pests. Experience has shown that the practice pays big dividends.

An Illinois farmer, expressing his views as a result of experience with the new system, said recently: "Rather than go back to former methods, I would quit the business. The practice of the McLean County system at present prices means the difference between profit and loss to the hog raiser. The system gives the little pigs a fine start and keeps them coming in healthy, thrifty condition from the very first."

Will Reduce Seed Cost

PENNSYLVANIA ranks second in the United States in the production of certified seed potatoes of the Russet Rural variety and fourth in the production of the Rural New Yorker variety. It is now an established fact that the production of certified seed in Pennsylvania will reduce the cost of seed to Pennsylvania potato growers twenty-five to fifty cents per bushel. This is possible for two reasons, (1) the short freight haul and (2) the low cost per bushel of seed production in Pennsylvania, due to the high average yields secured in the seed growing areas.

The total production of certified seed in Pennsylvania during 1924 was 75,000 bushels, this included 60,000 bushels of Russet Rurals and 15,000 bushels of the Rural New Yorker variety. This production represents an increase of twenty-five per cent over 1923, and the present demand appears to warrant this average increase in succeeding years.—R. E. Hartman, Penna. Bureau of Plant Industry, before the State Potato Growers' Association.

The Auto-Steer Front Truck of the NEW IDEA SPREADER

HERE is a striking example of New Idea Spreader superiority—an auto-steer, center oscillating type front axle of high carbon steel built-in and under the machine —not "hung on" in front. The oscillation point is protected by a heavy wearing plate. The bolster of high carbon steel is strongly reinforced. Slip tongue construction.

This unusual feature is found on no other spreader made. It exemplifies the many factors that make the New Idea *the world leader in quality and efficiency.* It demonstrates the care "Spreader Headquarters" takes to put out the most practical, most thoroughly dependable spreader that money can buy.

State Horticultural Meetings

(Continued from page 11)

matter of self-interest, without regulation or pressure from governmental agencies, and that the law of supply and demand will determine the extra price that it will be necessary to pay for certified trees. It is not practicable to attempt to certify varieties of peaches. The association appointed a committee to prepare a plan for variety certification in Pennsylvania.

Fertilize to Get Results

E. C. Auchter, of the University of Maryland, gave a very clear discussion of the nutrition of fruit trees, preliminary to concrete suggestions on fertilizing which, he said, should be considered only in connection with other cultural practices, especially soil management and pruning. His most important point was that the grower should not use a certain amount of fertilizer per tree simply on the advice of somebody else, or even whether the orchard is cultivated or in sod, but should fertilize to get certain definite results in tree growth and production. This will vary with the variety, as well as the soil.

Winners in Vocational Boys' Judging Contest

Above are the winners in the judging contests held at Harrisburg during the 1925 Farm Products Show. Standing, left to right: dairy cup, Kenneth Bender, Benton; corn cup, Clyde Jackson, Unionville; champion team with State Chamber of Commerce cup, Willis Taylor (corn contest), Zerbin Kline (swine contest), Nevin Beishline (potato contest); poultry cup (presented by Pennsylvania Farmer), Wesley Snyder, Elders Ridge. Seated: poultry cup, Stewart Hulslander, Troy (left); swine cup, Ray Henry, Orangeville.

Mr. Auchter has found, for example, that in Maryland maximum productiveness of the York Imperial is usually associated with an average annual terminal growth al over the tree, of about ten inches if the trees are over twenty-five years old, and about fifteen inches if the trees are between twelve and twenty-five years old. With Stayman these figures would be considerably higher. The grower should so fertilize, prune and cultivate as to get a certain amount of annual growth; that is his best guide.

At Hancock, Md., a sod apple orchard which received twelve pounds of nitrate of soda per tree averaged fourteen bushels per tree after four years' treatment, while a similar block which has been well cultivated, with cover crops, but without any fertilizer whatever, averaged twenty-one bushels per tree.

Report on Remedy for Deer Damage

R. T. Crisswell, of Chambersburg, for the Committee on Game Laws, reported the results of the conference with representatives of the sportsmen and with the Game Commission. The compromise reached at that time, advocating legislation which would provide an open season on doe where deer are doing damage, and also permitting the fruit grower to kill deer on his own property, at any time of the year, when they do any damage, was not ecceptable to the Association.

The committee was authorized to continue the work for legislative recognition of the principle of state responsibility for damage caused by game owned by the state, with the resulting obligation of the state either to prevent it or pay for it, and not throw the onus of this on the farmer.

Must Advertise Apples

On Wednesday evening there was a "Horticultural Banquet" with over 200 present. The retiring president, C. A. Greist, presided. The speaker of the evening was Paul O. Sampson, of Philadelphia, who stressed the importance of simplicity in the diet, and especially the dietetic value of fruits and vegetables. He advocated participation by Pennsylvania growers in a nation-wide advertising campaign to promote public recognition of the value of apples in the diet, as has been done with raisins, prunes, oranges and other lesser fruits. Such an advertising campaign, he said, would be likely to increase the demand for apples as much as it has for these other fruits.

A cent or two a bushel expended in this way would be a good investment and would enable the apple grower to meet the competition from citrus fruits and bananas, which now is stealing away his market, the per capita consumption of apples being now less than it was twenty years ago. An opportunity to do this is provided in "National Apple Week, Inc.," as detailed elsewhere. Brief remarks were made by J. M. McKee, C. J. Tyson, F. H. Fassett, P. S. Fenstermacher and others.

The Oriental Moth

Thursday morning was the "Spraying Session." The discussion of the Oriental Fruit Moth, led by C. H. Hadley and H. E. Hodgkiss, was not especially reassuring to the harassed peach grower. The entomologists had no effective remedy to suggest; apparently they are placing more dependence on the prospect of ultimate control by the natural enemies of the Oriental moth than by spraying.

None of the experimental work last season secured control; all it did was to reduce the damage. The entomologists are of the opinion that it does not pay to make five applications of nicotine spray, as recommended last season, but that it will pay to add nicotine to each of the summer sprays ordinarily applied for brown rot, perhaps three in number.

The two per cent nicotine dust is not as effective as the spray, one pint to 100 gallons. Plowing or discing the orchard four inches deep in early spring also helps. The paradichlorobenzene treatment for borers has some value for killing the hibernating fruit moth. It was the observation of many growers that Elberta is affected worse than other varieties, but the entomologists do not agree, stating that there are no varietal preferences.

Lime-sulphur versus Oil Sprays

S. W. Frost, of the Arendtsville Laboratory, recommends that growers continue to use lime-sulphur as a dormant and delayed dormant spray, rather than the oils. The latter are cheaper, and are effective for certain insects, such as the peach lecanium, red spider and San Jose scale, but have no fungicidal value, and hence are not effective against apple scab and peach leaf curl, as is lime-sulphur.

Oil sprays should never be applied when the weather is freezing, as this withdraws the water and the free oil is left on the trees and may injure them.

Cause of the Peach Drop

R. C. Walton, of Arendtsville, discussing "The Cause of the Peach Drop in 1924" stated that it was not due to the use of paradichlorobenzene, as some have surmised, but to spray injury, induced by the abnormally cold weather last spring. The arsenate of lead used in the spray was chiefly responsible, although examination of different brands shows that practically all of them did not contain water soluble arsenic. There is not likely to be a recurrence of the trouble until we have similar weather conditions. Adding lime to the spray will help to prevent injury.

Peach Yellows Declining

W. C. McCubbin, of the State Department of Agriculture, reported a marked decrease in peach yellows in the state, there being only nine-tenths of one per cent diseased trees in the orchards inspected in 1924, as compared with over 5 per cent in the same orchards several years ago. Inspection and early destruction of the infected trees are chiefly responsible for the more favorable situation, altho the disease may be on a natural decline, also.

Premature blossoming is not, as some suppose, a reliable means of distinguishing diseased trees. Reports from over 200 growers show that there is no evidence whatever that any particular nurseries are spreading the disease.

(To be continued)

For Summer Students

THE Pennsylvania State College will conduct summer sessions at Erie and Altoona, this year, as well as at State College. By this plan, the college hopes to relieve the congestion experienced at former sessions and also enable many students to carry on their summer work without the necessity of leaving home. The sessions will be of the same length as usual and will embrace the same subjects.—A. L. B.

Hundreds of Farmers

during 1924 secured loans through this Bank, which enabled them to buy a farm, lift present indebtedness, or get more out of their land by securing new implements and making needed improvements.

"The Mortgage That Pays Itself Off"

made it easy for them. You can do the same thing. Easy semi-annual payments for 33 years—and the farm is clear. Straight 6% interest plus 1% reduction of principal each year.

Operating in Pennsylvania and Maryland.

Digs Deep
Kills the Weeds
Makes a Fine Seed Bed

This tool is more than a harrow—it is a tool that will prevent that 25 per cent loss of productivity caused by weed growth on the average farm. The sharp, penetrating teeth go down deep, thoroughly pulverize the soil and bring the weed roots, rootstocks and the underground stems to the surface.

John Deere-Syracuse Spring-Tooth Harrow

Particularly adapted for gritty land where deep cultivation is required. Does not clog—weeds and trash work to center and pass through opening. Teeth are clipped onto bar—no bolt holes to weaken them—adjustable for different soil conditions. Runners have steel shoes; adjustable hitch. Teeth and frame of high quality steel.

Furnished in any width from a single section, 31 inches wide, up to six sections, 16' 10". Your John Deere dealer can supply as many sections as you require; also tractor hitch.

Use this harrow and be certain of a clean, productive field. Write for booklet. Address John Deere, Moline, Illinois, and ask for booklet HX-4 36

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth and Forum Friends:—May I join your happy circle? I am eleven years old and live on a farm. We have two pets, they are a dog and a cat. I have two sisters and one brother. The girls ages are seven, and five, and the one boy is eight and the other one is just a baby. We have taken Pennsylvania Farmer for about a year and a half. I like it very much. When it comes I turn to the Forum page. Wishing you all good luck.—Bernesse Rearick, Armstrong County, Pa.

Dear Cousin Ruth and Forum Friends:—Please, may I join your happy circle? I live on a farm and we have horses, cows, chickens, two cats and a dog named Victor.

I attend Miller School. I am eleven years old and passed the eighth grade examination last year. I expect to go to high school next year. I didn't miss a day for the last five years.

I have two brothers and two sisters. My youngest brother is five years old.

It has snowed two feet deep and I enjoy taking sleigh rides. I read the Forum friends' letters every Saturday evening. I wish you good luck.—Garson Lutz, Kempton, Berks County, Pa.

Dear Cousin Ruth:—I am fourteen years old and live on a farm of nearly one hundred acres. I help with all branches of our farming, such as picking berries, fruit and vegetables.

I am a regular farmerette doing a part of all the work, from picking berries to tramping the hay in the mow.

We have two horses. One of them I was riding in the picture I sent you. For pets I have two dogs, two cats and formerly a tame groundhog which was very interesting.

My brother found her while walking across a nearby field when she was about two weeks old. We named her Josephine but called her Josie for short. She knew her name. She liked to play like a dog and would run across the room and up on a couch.

She ate almost anything, but raw peaches, cake, bread, candy and flowers were her favorite food. She wouldn't eat anything greasy. She took the above-named things in both hands and sat up while eating. She would also hold a cup of milk and drink the same as a person.

October, a year ago, she disappeared into the hole which she had dug under an old stump. The following April 9th she appeared. When spoken to she sat down and let us call her. She was then just as tame as before she went away. Some time after this a neighbor's dog bit her thru the neck and about a week later she died. We were all grieved at this. I have enclosed a picture of her.—Kathryn Cottrell, Monmouth County, New Jersey.

The picture of Josie is very interesting, Kathryn, but it would not make a good reproduction in the paper. I am sorry, for other Forum friends would like to see it. It was most interesting to hear about your unusual pet.

COUSIN RUTH.

Answers to Riddles Published February 14

1. Wedding ring
2. Glove
3. Because it is nothing without its tail
4. I. C. U.
5. Falsehood

—Philma Klipple, Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—My cousin, Dorothy Zimmerman, is visiting here and she is writing, too. Will you let her join the Y. P. F., Cousin Ruth? I saw that I did not put where I live and I will not forget this time. How many Forum boys and girls had a nice Christmas? I surely did. I received many presents. — Annetta Zimmerman, Cumberland County, N. J.

Dear Cousin Ruth and Forum Friends:—May I join your happy Forum? I have written one letter but it was a good while ago. I don't think you remember, do you? We moved to my grandmother's house because she is very ill. She has been sick for about two or three years. We are going back home next spring. Our house is a half a mile from my grandmother's. I live right next door to my cousin, Annetta Zimmerman. I have a cousin named Bernice and we are all chums.

Sometime when it is a nice day Annetta and I will have our pictures taken and then send them into the Y. P. F.—Dorothy Zimmerman, Cumberland County, N. J.

MICKEY AND HIS MISTRESS
Rose Heit, Bedford County, Pa.

Dear Cousin Ruth and Forum Friends:—I am twelve years old and in the fifth grade at school. I have one sister and one brother. My sister and I have to walk about one-half mile to school. I have lots of pets, they are guinea pigs, dogs and kittens.

We live on a farm and have horses, cows and chickens. I can hardly wait until spring comes. I love to go swimming the best thing in the summer. I take pictures in the winter and summer time also.

I have a nice little horse that is as nice as a pony.— Its name is Maude.—Leola Isabelle Lindaberry, Susquehanna County, Pa.

Dear Cousin Ruth and Forum Friends:—How are you all these snowy days? I have good times in the snow. How many saw the eclipse Saturday? I put dark glasses on and could see it good. From where I live we could see just part of it at a time.

I have four sisters and two brothers. My brothers live in Pittsburgh and all of my sisters are single except two. I live with one of them.

My father lives in Fulton County but all of my sisters except one live in Franklin County. I don't know which county I would sooner live in. They are both the same to me.

Well, I must close and let the new members fall in line. With good wishes and good luck to every one.—Edna Pittman, Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—May I join your happy circle? I am ten years old. My birthday is the first of April. I have two sisters and no brothers. I have three-fourths of a mile to walk to school. I am in the sixth grade. There are forty-three pupils in my school. My teacher is a good teacher.

The snow is two feet deep here and it is drifting all the time. The hill by our house is drifted full. It is about eight feet deep.

My oldest sister is thirteen years old. The other is eight years old. My oldest sister shovels paths down our yard so we can sleigh-ride.

I live on a large farm. We have cows, calves, sheep, chickens and geese.—Louis Mack, Luzerne County, Pa.

Dear Cousin Ruth and Forum Friends:—May I join your merry circle? I have read your Y. P. F. page for over three years and I often thought I would write and now I am writing and I hope it will not be the last time.

Well, we live on a farm and have chickens, ducks, geese and guineas. We have two horses and seven cows.

For pets I have two dogs and three dollies. I have one mile to go to school and have a very nice teacher. We have forty in our school. I sit with Mable Masden and her house is right beside the schoolhouse.

We have a mother kitten and she has two kittens which we named Nig and Spotty.

I have three sisters and two brothers. Altogether in the family we have eight.

May I write a riddle? What is round at each end and high in the middle?—Milly Calvert, Lycoming County, Pa.

Dear Cousin Ruth and Forum Friends:—We have been getting Pennsylvania Farmer for a year and I always read the Young People's Forum Page and I have seen some nice letters. I often thought I would like to write but I never did. I have a pet cat and it is tiger color. She can stand on her two hind legs and walk around. I don't have far to go to school because the schoolhouse is right beside my house. I am in the sixth grade and am twelve years old. —Mabel Masden, Lycoming County, Pa.

Dear Cousin Ruth and Forum Friends:—I'm a little girl just past nine. I thought you would like to hear from me. I go to school every day and like it very much. I have one mile to walk, but I catch a ride with the milk men almost every morning. We have a big dairy farm.

I wash the breakfast dishes every morning before I go to school and sometimes help feed the calves.

I am sending you the number of words I got out of the name, George Washington. I got 355 words. Will write some more some other time.— Dorothy Edna Taylor, Bradford County, Pa.

Dear Cousin Ruth:—We have been taking Pennsylvania Farmer for some time and like it. I enjoy reading the Forum page. I am thirteen years old and am in the seventh grade at school. I have about one-half mile to go to school.

We live on a farm and have horses, young cattle and chickens. We have two cars, one belongs to my brother Albert. I have two brothers and one sister, living, besides myself. I weigh 152 pounds. Who can come up to that? I do not have any dogs, but we have four cats. We have four sheep, one ewe belongs to me.—John G. Snyder, Bedford County, Pa.

Dear Cousin Ruth:—We live on a farm. I work hard all summer. My two brothers, my father, two sisters and I help with the crops. We have three little calves; eight pigs and over a hundred chickens.

For my pet I have a little dog; his name is Shebby. I go to Kirbyville School. I have a mile to go to school and I walk it every day. We had an entertainment last year. For the money we got we bought a volley ball and net to play with. We all can play with it.—Mary Barral, Berks County, Pa.

L	H	E	W	E
I	A	G	A	S
N	R	B	I	H
C	N	A	N	G
O	L	N	O	T

Dear Little Folks:—Two great Americans are looking out of this little window at you. They both looked out upon the world for the first time during the month of February, tho many years came between the first great man and the second. You will find their names if you start at the right letter in this amazing window and keep going on in a continuous line — probably you'll have to zig-zag a bit, but you won't skip any letter. When you have found the names, send them to me on a POSTAL CARD not later than February 28. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in January 31 issue of Pennsylvania Farmer is: HER BACK YARD.

The prize winners are: Luther B. Humbert, age 11, Westminster, Md.; Earl Kline, age 9, Royersford, Pa.; Angie Klink, age 9, West Sunbury, Pa.; Chester McMinus, age 8, Lanes Mills, Pa.; Walter A. Mengel, age 8, New Palmyra, Pa.; Marjorie E. New, age 9, Canaseraga, New York; Virginia Fae Oberly, age 10, Waymart, Pa.; Glenn Roland, age 10, Bel Air, Md.; Glenden Warren, age 10, Parnassus, Pa.; Alice R. Woodman, age 7, Rushland, Pa.

Mrs. IDA S. HARRINGTON

Introduction to Basket Making

How to Get Your Hand in—Uses for Practice Mats

SIMPLE weaving with reeds (which is basket-making) is like darning. First we make a foundation on which to weave. In weaving with reeds the spokes fulfill this purpose. Suppose you take the first step in basket-making, and weave a flat mat. Cut eight 12-inch spokes of No. 4 reed and one 7-inch spoke of No. 4 reed, and put these, together with one weaver of No. 2 reed, to soak in hot water for ten minutes.

Now lay four of these spokes on a board and with your sharp penknife cut a one-inch slit lengthwise at the middle of each. Take one of these slit spokes, widen the slit with your nutpick and slip the unslit spokes thru it. Now slip the remaining three slit spokes over the unslit ones. You now have a cross formed by four spokes going thru four others. See Fig. 1.

Making a Start

As our first weaving is going to be a simple "one over, one under," with only one weaver, we must have an uneven number of spokes. Otherwise on our second round we shall find ourselves going over, instead of under, the spoke we went over in the preceding round. You know how a darn looks when you lose track and go twice over the same thread instead of keeping to the "one over, one under." So between the vertical spokes insert the extra half-length spoke cut for this purpose.

Now fasten your weaver. Holding the cross-shaped foundation in your left hand, take an end of the weaver and lay it next to the top horizontal spoke, with its end to the right. Bring the weaver up over the vertical spokes, under the horizontal ones at the right, over the vertical ones at the bottom, and under the horizontal ones at the left. Do this twice around to bind the weaver in place. See Figure 2. Then begin separating the spokes as you come to them, beginning with the top group, so that your weaver, instead of going over a group of spokes, goes only over one spoke, under the next, and so on. Keep the spokes very even. This takes practice.

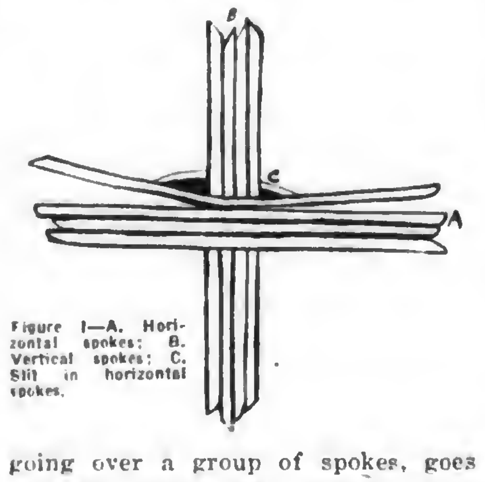

Figure I—A. Horizontal spokes; B. Vertical spokes; C. Slit in horizontal spokes.

Where the Difference Lies

Right here is where weaving differs from darning. You can't pull the weaver as you would darning cotton. Guide your weaver over and under the spokes with your forefinger held just as close to the work as you can get it. When you come to the end of your weaver (we are using only one this time) trim the end of it to a point and (with the nutpick to help you) push it down close beside the nearest spoke to fasten it.

Trim the ends of your spokes so that they are even in length and come to a point. Dampen them if necessary. Take each spoke, bend it gently, and press the end down into the channel made by the next spoke on the left. Do this with each spoke in turn, keeping the loops even in size. You should now have a flat mat with a plain open scallop for a finish.

How does your mat look? Does it lie flat? If not, you have pulled the weaver tighter in one place than in another. Does the weaving look even? If not, you have failed to use your nutpick in pushing the rows together. Does the mat look rough? Follow the directions for singeing.

Make mats until you feel at home with your material. Mats make handy teapot stands. Two mats fastened together are useful as whisk broom holders. And mats are the beginnings of the elaborate and beautiful baskets which you can make when once you have mastered the first steps.—I. S. H.

With This First Lesson the Beginner Is Well under Way

MANY people hesitate to undertake basket-making because they have been led to believe that the necessary tools and materials are hard to get and expensive.

The first step in basket-making, then, is to explain away these objections.

Tools.—Special tools may be bought for basket-making, but these simple ones will do the work satisfactorily:

A tape measure or ruler for measuring the spokes.

A nut-pick for inserting extra spokes or pushing rows of weaving together.

A sharp penknife for slitting spokes.

Scissors and razor blades for cutting and trimming.

Reed.—Reed can be bought at any basket supply house, and is not expensive. It is put up in one-pound bundles and comes in many sizes, from O (very fine) to 12, 14, or 16 for the very heaviest work. Flat reed comes in different widths. It works up quickly and is even cheaper than round reed.

Reed is easy to handle if made pliable through soaking before one tries to work with it. It requires about twenty minutes' soaking (varying according to the size of the reed) if the water is cold, and about half as long if it is hot.

Parts of a Basket.—The spokes which form the framework must always be made of heavier reeds than the weavers. A size or more is the usual difference between the two. If for instance, the spokes are made of No. 3 reed, the weavers should be of No. 1 or No. 2. Spokes form the support, while weavers fill in and shape the basket.

Bases.—The beginner is sometimes afraid to make a woven base for fear it will not lie flat. Ready-made wooden bases can be purchased, and these are especially desirable for trays, waste-paper baskets, fern-stands and flower baskets. The woven bases are generally used for work baskets, hanging baskets, sandwich baskets, etc.

The Finish.—A beginner's first efforts are apt to look a little rough and unkempt, but this is easily overcome. As soon as the basket is completed cut all the short ends on the inside, being careful to cut on the slant and to leave enough of an end so that each one will rest against a spoke and not pull out. Then singe the basket over an oil burner or a candle to burn off the "hairs." Plain varnish or white shellac makes a good natural finish. Wood dye may be painted on and a coating of shellac applied over this, if a dark finish is desired. A variety of colors may be secured with the dress dyes used for wool. Enamel is often used.

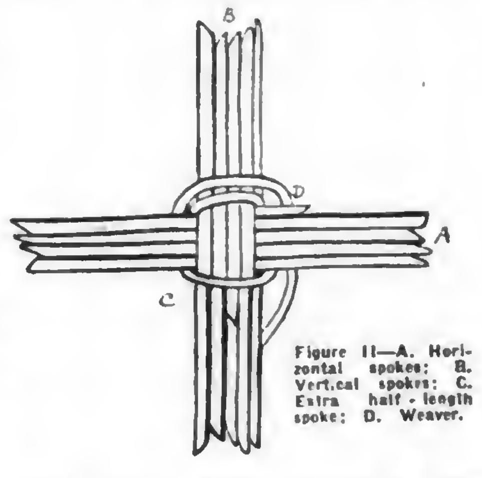

Figure II—A. Horizontal spokes; B. Vertical spokes; C. Extra half-length spoke; D. Weaver.

As soon as you have made yourself familiar with the handling of reed, we shall print directions for a waste basket made with a wooden base, and for a work basket with the Japanese button centre.—H. H.

Good Word for Linoleum

OUR living room floor had for years been carpeted with a home-made rag rug. As the room was in use constantly, it needed cleaning every day. After being on the floor a very short time, the lightest brushing of the rug raised a cloud of dust.

I cannot bear such a dust, so I had formed the habit of taking the rug outdoors at the end of each week to clean it. As a rag rug is very heavy, it made one of my hardest tasks. Finally the rug began to look shabby, and I decided to get a linoleum rug. The floor was quite smooth and I covered it with a number of layers of newspapers before laying the rug.

What Backaches It Saves!

What a comfort that rug has been! I made a dustless mop out of an old shepherd check dress by dampening it, dipping it in kerosene and hanging it in the air for a day. This keeps the rug clean for days. When the dustless mop needs help, I can take a basin of water and wash and wipe the whole rug in ten minutes. I can keep it clean for six months with less energy than it took to keep the old rag rug clean for a week. We have had the linoleum almost a year and it is still as bright as when new.

Never put an old carpet or anything that will make a deep, soft surface under linoleum, as chairs will then make holes thru it. To protect your knees when cleaning, try making pads just like hot iron holders and fasten them to round garters. These make comfortable kneeling pads.—Mrs. E. M. C.

When We Face the Music

IT WAS with apprehension that I looked forward to the coming of winter. In our home was an aged grandmother and another member, sick in bed, to care for. With the rest of the family at school and at outside work most of the day, the outlook was anything but promising and I shrank from the big tasks ahead.

Smilin' Thru

However, I determined to smile at each task as it came, and as the days go by I find that my fears were needless. The biggest task, at close range, is not as big as it looked from a distance. There is an end to every day and with it comes rest and renewed fellowship with our loved ones.

Often we dread things in the distance. Looked at from our valley of fear they seem large and menacing. But whether the thing we dread be an operation, a visit to the dentist, sickness, sorrow, or just a big day's work, we need only do our best each minute, each day,—and the days will go by without effort on our part! The dread thing is over and we are left with only the memory of it and a sense of triumph.

It is the spirit in which we meet life that determines its effect on us. If we look for good, we find it!—E. M. W.

For Quilt Makers

If you are interested in securing patterns for quilts, send a self-addressed stamped envelope to the Editor of the Home Page. She will gladly give you the names of two places where you can get patterns and instructions at a reasonable price.

GRANDMOTHER'S GINGER COOKIES

These didn't always contain ginger, but they were always good. Grandmother took a cupful of molasses, a half-cupful of sugar, the same amount of butter or lard, a quarter-cupful of water, a teaspoon, each, of soda, cinnamon and cloves, and enough flour to roll out. The bigger they were, the more we enjoyed them!

* * *

WHITE COOKIES, TOO

When Grandmother made white cookies, she used the rule given her by the minister's wife. She always called them "Mrs. Lane's cookies." They were made of one and a half cups of sugar, one-half cup butter, two eggs, a quarter cup of water, three teaspoons of baking powder, and flour enough to roll.—V. M. B.

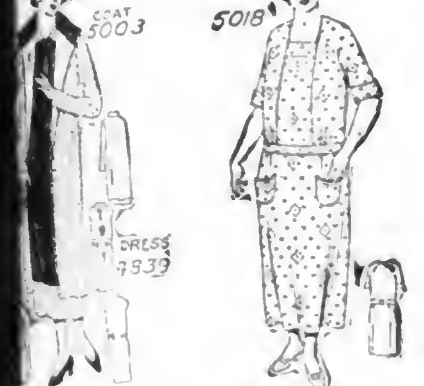
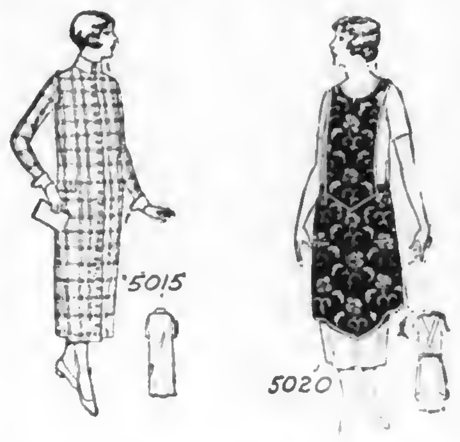
03-4839.—An "Ensemble" Cos- .—The most popular style of the n is here pictured. It combines is instance Ladies Coat 5003 and piece Dress 4839. Broadcloth, wool mixture in black or grey used. One could have satin ille in two shades or in con- ing colors. The smartness of "ensemble" depends on harmony just the right contrast. The may be finished in the shorter h that is illustrated in the small . The fronts may be buttoned to neck, or rolled open as in the view. The dress is a simple piece "slip on" model, with the ss caught in rows of upright s or tucks. The coat is cut in izes: 34, 36, 38, 40, 42 and 44 es bust measure. The dress is in seven sizes: 16, 18 and 20 for misses, and 38, 40, 42 and nches bust measure for ladies. To e the costume for a 38-inch size llustrated in the large view, will ire 2⅝ yards of the wool mix- and 2¼ yards of the broadcloth nches wide with three-quarters of contrasting silk for facings he coat, or the coat may be lined rely, the lining to serve as a fac- This will require 4⅝ yards. separate patterns, 10 cents each.



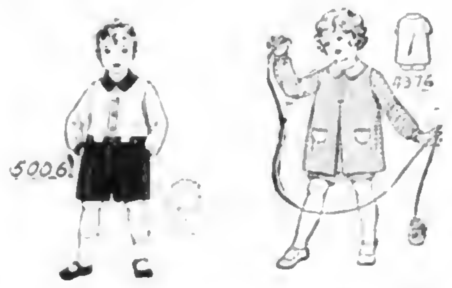
018.—Morning Frock.—This e closes at the side of the vest tion. The lines are comfortable pleasing. Percale, gingham, n and rep are attractive for ses of this kind. Eight sizes, bust asure 42, 44, 46, 48, 50, 52, 54 56 inches, and waist measure, 37, 39, 41, 43, 45, 47 and 49 hes. To make the dress for a 44- h bust will require 4⅛ yards 36 hes wide. The width at the foot wo yards. Pattern, 10 cents.

015.—A Smart Day Dress.—Plaid nel in brown was chosen for this ractive model. It will also be asing in taffeta or linen. Three sizes: 16, 18 and 20 years. An 18-year size made with long sleeves, will require 3¼ yards of one material 40 inches wide. For collar and cuffs of contrasting material three-eighths yard is required. If the dress is made with short sleeves 3⅛ yards will be required. Pattern, 10 cents.



5020.—A Pleasing Apron.—Cretonne or chintz may be used for this design. It is also attractive in lawn, sateen and other apron materials. Three sizes: small, medium and large. A medium size will require 2⅛ yards of 36-inch material. Pattern, 10 cents.

5006.—For the Small Boy.—Velvet and pongee, or velvet and broadcloth may be combined for this style. It is good also for linen, seersucker and other wash fabrics. The sleeve may be in wrist or elbow length. Three sizes: 2, 4 and 6 years. A four-year size requires 1¼ yard for the blouse, and 1¼ yard for the trousers, cuffs and collar 36 inches wide. Pattern, 10 cents.



4976.—For Play Time.—Checked gingham and linen are here combined. This model is also good for flannel, jersey weaves, for pongee or poplin, and other wash materials. Four sizes: 2, 3, 4 and 5 years. A four-year size requires 2⅜ yards of 36-inch material. If made with short sleeves one-eighth yard less is required. For collar, cuffs, facing and pockets of contrasting material one-quarter yard is required. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

How about Mother's Health?

ousewife's Food Should Suit Her Particular Need's

OTHER is usually so busy watching out for the diet of the rest the family that she is apt to be lectful of her own diet—until— l she has put on twenty-five pounds much weight, or perhaps devel- d some sort of kidney trouble that l require care and watching to get of.

f the men are doing hard physical k out of doors during the winter. y must be fed accordingly, and ther, who is working indoors, will bably eat foods that are too hearty ber rather than cook anything cially for herself.

Mother's breakfast is the keynote the day, and if the men are cut- g wood and must have hot batter kes and fried meat and doughnuts, ve them first and then have toast, eal and fresh fruit for yourself. You have a tendency to overweight. it the cereal and have only toast, sh fruit and coffee. If you cannot ve the fresh fruit, substitute prunes or some other fruit—perhaps a baked apple—but an orange or grapefruit is preferable.

In planning the meals for the rest of the day, think of your own body needs. If you have a tendency to kidney trouble omit meat largely from your diet. This, however, should be done under the supervision of a reliable physician after the urine has been analyzed.

Eat Plenty of Vegetables

Do see to it that you have plenty of vegetables during the winter and plenty of fruit. Try to have at least one vegetable besides potatoes for dinner and supper. If you are putting on pounds with years, do not eat potatoes and bread at the same meal. Try substituting other vegetables for potatoes, partly at least.

If you are trying to add pounds, eat plenty of bacon, eggs, milk, cream and other foods that make fat, with due regard for plenty of milk.—Mrs. May H. Mumaw.

The
Charles William Stores Inc.
New York City

Where bargains are the rule—not the exception

HAVE you received your copy of the new Spring and Summer Catalog of The Charles William Stores?

If you haven't, there is a treat in store for you.

The catalog offers an almost endless variety of practically everything you need and use in the home, shop or farm. It displays the new Fifth Avenue styles for every member of your family—and best of all, offers them at the lowest possible prices.

Have more and save more!

Pressure Cooker Makes Goo

Food Value Is Not Wasted and Fuel Is Saved

ALICE MARGARET ASHTON

"DO YOU consider the pressure cooker a good investment?

"Isn't it a lot of money to invest in something you use so little—especially as the wash-boiler acts as a very satisfactory canner?

"After using a pressure cooker for a year, do you advise its purchase?"

These and many kindred questions are constantly being asked by anxious country housewives.

Not Just a Canner

The first thing to consider is its name. Get away from the habit of calling it and thinking of it as a "canner." It is a cooker. While as a canner it is indeed a "joy forever," canning represents but a small part of the cooker's usefulness. My pressure cooker stands on a corner of the kitchen table, and while my family is now small, seldom a day passes even in the winter season when work in the farm kitchen is at its lowest ebb, that the cooker is not pressed into service several times. As an investment it may be classed on a three-hundred-and-sixty-five-days-in-a-year basis along with the teakettle and the dishpan.

It Offsets Fuel Scarcity

Far from being an extravagance, the pressure cooker is one of the leading household exponents of economy—economy of time, of space, of work and of fuel. Perhaps its economy of fuel makes the best "talking point," particularly with the men.

Father is sure to be deeply interested in the fact that the pressure cooker is a remarkable conserver of fuel. With it canning and cooking are accomplished in about one-third the time necessary by the older methods. In the case of baking, about the usual amount of time is required but much less fuel is consumed because it is so much easier to heat the cooker over the flames than to heat the whole oven.

The cooker is especially nice for baking brown bread, fruit cake and any food containing molasses, which is prone to bake too hard in the oven. It is unexcelled for custards.

Another advantage in pre cooking is the fact that no stea odors need escape into the roo the cooker is carried to the back while exhausting.

Meat is undeniably better if under pressure. It reaches a stat tender deliciousness impossible open kettle methods.

We think no pumpkin so sat tory as that cooked in the pre cooker. After it is thoroly tende like to "dry" it out in an open over the fire when it becomes and velvety that pies made fro invariably call forth words of pr

I wish that every housewife has difficulty in getting her interested in greens could have privilege of preparing the dish pressure. Not only do the taste better, but they are be since none of the minerals or are lost in the cooking.

Makes Canned Goods Taste Bett

"I suppose," suggests a ske sister, "that you consider canned under pressure superior those done by the hot-water method And upon receiving an emph affirmative answer, she says: "D you honestly think that must largely imagination? If the pr was fresh and good and if it tightly sealed, how can it be better?"

I believe the shorter proce must be responsible for the dif ence. Certainly corn canned pressure, reheated and seasoned cately with salt, pepper and b can scarcely be distinguished that freshly cut from the cob.

Worth All It Costs

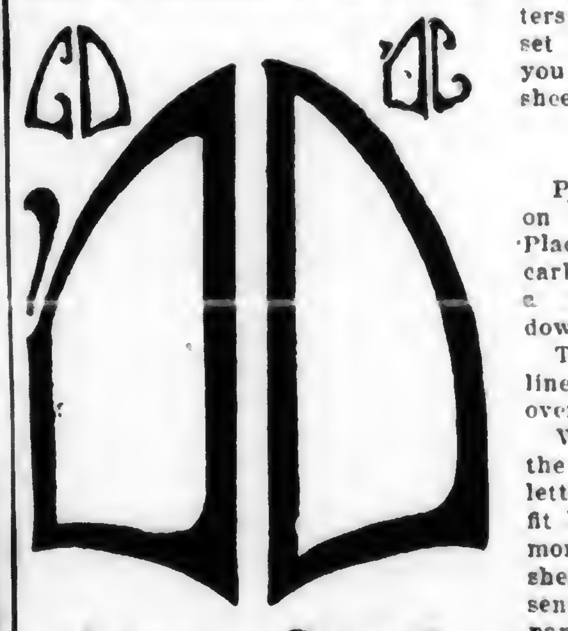
In view of all these facts more—because we are constantly ing new uses for our cooker—I consider a pressure cooker worth and more than the price demanded

Buy your cooker from a reli source. Follow the simple directio there is nothing complicated in use. And I can scarcely think of better investment for the savings a busy housewife.

To Give That Personal Touch

Easily Worked Designs Well Worth Having

WHEN making nice things for our friends or for our own household the initials of the prospective owner always add a happy touch of individuality. Monograms are easily formed if we have lett designed so that the initials make neat, compact pattern.



Pennsylvania Farmer monog patterns will give you a set of le ters from which you can make set of initials you desire. We you a complete set of letters and sheet of carbon paper.

How to Go About It

Put the carbon paper face do on the right side of your goo Place the pattern face up on th carbon paper. Trace the letters wi a smooth-pointed stick pressi down on the right side of your goo

The letters may be worked in ou line stitch, chain stitch, over-and over, or French knots.

With our letter patterns, givi the right and left pattern of eve letter in the alphabet, anyone ca fit letters together into a decorati monogram. For a complete patte sheet and piece of carbon pape send ten cents to the Monogram De partment, Pennsylvania Farmer, 2 South Third Street, Philadelphia.

THE CARE OF THE HAIR

More Details about the Use of Butter on the Scalp

Dear Editor:

In a recent issue there was an article on "Beauty Hints." What interested me was about the care of the scalp and hair. It spoke of butter to be used on the scalp. Did it mean fresh or salt butter? I once knew a lady past sixty years of age with luxuriant hair of the darkest brown,—not a grey hair. She made a practice of using fresh butter on her scalp once or twice a month. Others recommend using salt. I should like to know what the writer of the article advises.—Mrs. C. E. V.

It has long been known that animal fats were conducive to hair growth, and for this reason were avoided in face creams. There is no better animal fat for the hair than butter, either fresh or salt. There are a great many theories as to the cause of grey hair and very often it is hard to find the particular reason for its changing color.

The application of salt to the scalp is a great stimulant to circulation, but should not be applied too often. It seems wisest, since the oil is known to be helpful, to take this treatment in combination, applying a small amount of butter to the scalp once a week.

Gentle Rubbing Most Beneficial

Part the hair every half inch and rub the butter gently into the scalp. Hard rubbing breaks off the hair. If you wish, heat the butter and apply as the hairdressers do hot oil along the parted hair.

If your hair is already streaked, give it the same treatment. It cannot do harm and it may do great good. But remember that the greying of your hair may be due to some disorder which butter and salt cannot reach! Try it nevertheless, and at the same time give the scalp a five-minute rub each day with the finger tips, brush it a hundred strokes, don't snarl it, and keep it clean with a simple shampoo.—Effie Maurine Paige.

And What about Coal Oil?

Dear Editor:

I was reading in the January 3d issue about being your own hairdresser. You speak of hair tonic being made from coal oil. What kind of perfume would you advise putting in? Would you advise using this at any other time than just before washing the hair?

You also speak of butter with its animal fat. Does this mean salted or unsalted butter? When should it be used on the head?

My head has lots of dandruff and my hair is exceedingly oily. I have been rubbing a well beaten egg into the scalp before washing. Am thirty-three years old and my hair is turning grey. What would you advise?—E. M. K.

Do not try to perfume oil at home. It takes a chemist to know just what to combine with it. A good result is always obtained by using coal oil, both for dandruff and for thin hair. Simply rub it into the scalp after parting the hair, wrap the head in a towel overnight, and shampoo the next day. This gives the oil time to do its work, and the towel keeps much of the unpleasant odor in. I should not use it except just before washing the hair.

Your dandruff shows that you need massage as well as the oil treatment followed by a shampoo. I should use a small amount of butter on the scalp once a week (See answer to Mrs. C. E. V.) and the coal oil treatment before a shampoo.—Effie Maurine Paige.

WALL PAPER as low as 3¢ per single roll

82 Cents Papers a Whole Room!

We mean that 82 cents buys paper for a whole room 10 x 12 feet, side walls, border and ceiling!

That is an example of Wall Paper prices at Ward's, where Wall Paper is sold without the usual "Wall Paper Profits." It means that Wall Paper can now be bought for one-half the prices you have known.

Re-Paper your home for a few dollars

Why any longer have a dingy, faded wall? Paper costs so little at Ward's. The sample book shows papers for the whole house at amazingly low prices. Paper for the entire house at these low prices:

Entire Bed Room....$ .82 to $1.50
Entire Dining Room.. 1.00 to 3.00
Entire Living Room.. 1.25 to 5.90

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

THE schoolmaster turned and bade me good night and went away and closed the door.

I sat down and opened the sealed envelope with trembling hands, and found in it this brief note:

"Dear Partner: I want you to ask the wisest man you know to explain these words to you. I suggest that you commit them to memory and think often of their meaning. They are from Job:

"'His bones are full of the sin of his youth, which shall lie down with him in the dust.'

"I believe that they are the most impressive in all the literature I have read.

"Yours truly,
"Silas Wright, Jr."

I read the words over and over again, but knew not their meaning. Sadly and slowly I got ready for bed. I missed the shingles and the familiar rustle of the popple leaves above my head and the brooding silence of the hills. There were many barking dogs. Some horsemen passed, with a creaking of saddle leather, followed by a wagon. Soon I heard running feet and eager voices. I rose and looked out of the open window. Men were hurry down the street with lanterns.

"He's the son o' Ben Grimshaw," I heard one of them saying. "They caught him back in the south woods yesterday. The sheriff said that he tried to run away when he saw 'em coming."

What was the meaning of this? What had Amos Grimshaw been doing? I was up at daylight and Mr. Hacket came to my door while I was dressing.

"A merry day to you!" he exclaimed. "I'll await you below and introduce you to the humble herds and flocks of a schoolmaster."

I went with him while he fed his chickens and two small shoats. I milked the cow for him, and together we drove her back to the pasture. Then we split some wood and filled the boxes by the fireplace and the kitchen stove and raked up the leaves in the dooryard and wheeled them away.

"Now you know the duties o' your office," said the schoolmaster as we went to breakfast.

WE SAT down at the table with the family and I drew out my letter from the Senator and gave it to Mr. Hacket to read.

"The Senator! God prosper him! I hear that he came on the Plattsburg stage last night," he said as he began the reading—an announcement which caused me and the children to clap our hands with joy.

Mr. Hacket thoughtfully repeated the words from Job with a most impressive intonation.

He passed the letter back to me and said:

"All true! I have seen it sinking into the bones o' the young and I have seen it lying down with the aged in the dust o' their graves. It is a big book—the one we are now opening. God help us! It has more pages than all the days o' your life. Just think o' your body, O brave and tender youth! It is like a sponge. How it takes things in an' holds 'em an' feeds upon 'em! A part o' every apple ye eat sinks down into yer blood an' bones. Ye can't get it out. It's the same way with the books ye read an' the thoughts ye enjoy. They go down into yer bones an' ye can't get 'em out. That's why I like to think o' Michael Henry. His food is good thoughts and his wine is laughter. I had a long visit with M. H. last night when ye were all abed. His face was a chunk o' laughter. Oh, what a limb he is! I wish I could tell ye all the good things he said."

"There comes Colonel Hand," said Mrs. Hacket as she looked out of the window. "The poor lonely Whig! He has nothing to do these days but sit around the tavern."

"Ye might as well pity a goose for going barefooted," the schoolmaster remarked.

In the midst of our laughter Colonel Hand rapped at the door and Mr. Hacket admitted him.

"I tell you the country is going to the dogs," I heard the Colonel saying as he came into the house.

"You inhuman Hand!" said the schoolmaster. "I should think you would be tired of trying to crush that old indestructible worm."

Colonel Hand was a surly looking man beyond middle age with large eyes that showed signs of dissipation. He had a small dark tuft beneath his lower lip and thin, black, untidy hair.

"What do ye think has happened?" he asked as he looked down upon us with a majestic movement of his hand.

He stood with a stern face, like an orator, and seemed to enjoy our suspense.

"What do you think has happened?" he repeated.

"God knows! It may be that Bill Harriman has swapped horses again or that somebody has been talked to death by old Granny Barnes—which is it?" asked the schoolmaster.

"It is neither, sir," Colonel Hand answered sternly. "The son o' that old Buck-tail, Ben Grimshaw, has been arrested and brought to jail for murder."

"For murder?" asked Mr. and Mrs. Hacket in one breath.

"For bloody murder, sir," the Colonel went on. "It was the shooting of that man in the town o' Ballybeen a few weeks ago. Things have come to a pretty pass in this country, I should say. Talk about law and order, we don't know what it means here and why should we? The party in power is avowedly opposed to it—yes, sir. It has fattened upon bribery and corruption. Do you think that the son o' Ben Grimshaw will receive his punishment even if he is proved guilty? Not at all. He will be protected—you mark my words."

HE BOWED and left us. When the door had closed behind him Mr. Hacket said:

"Another victim horned by the Snapdragon! If a man were to be slain by a bear in the woods Colonel Hand would look for guilt in the Democratic party. He will have a busy day and people will receive him as the ghost of Creusa received the embraces of Aeneas—unheeding. Michael Henry, whatever the truth may be regarding the poor boy in jail, we are in no way responsible. Away with sadness! What is that?"

Mr. Hacket inclined his ear and then added: "Michael Henry says that he may be innocent and that we had better go and see if we can help him. Now I hadn't thought o' that. Had you, Mary?"

"No," the girl answered.

"We mustn't be letting Mike get ahead of us always," said her father.

The news brought by the Colonel had shocked me and my thoughts had been very busy since his announcement. I had thought of the book which I had seen Amos reading in the haymow. Had its contents sunk into his bones?—for I couldn't help thinking of all that Mr. Hacket had just said about books and thoughts. My brain had gone back over the events of that tragic moment—the fall, the swift dream, the look of the robber in the dim light, the hurling of the stone. The man who fled was about the size of Amos, but I had never thought of the latter as the guilty man.

"You saw the crime, I believe," said Mr. Hacket as he turned to me.

I told them all that I knew of it.

"Upon my word, I like you, my brave lad," said the schoolmaster. "I heard of all this and decided that you would be a help to Michael Henry and a creditable student. Come, let us go and pay our compliments to the Senator. He rises betimes. If he stayed at the tavern he will be out and up at his house by now."

The schoolmaster and I went over to Mr. Wright's house—a white, frame building, which had often been pointed out to me.

Mrs. Wright, a fine-looking lady who met us at the door, said that the Senator had gone over to the mill with his wheelbarrow.

Mr. Hacket asked for the time and she answered:

"It wants one minute to seven."

I quote her words to show how early the day began with us back in those times.

"We've plenty of time and we'll wait for him," said the schoolmaster.

"I see him!" said little John as he and Ruth ran to the gate and down the rough plank walk to meet him.

WE SAW him coming a little way down the street in his shirt-sleeves with his barrow in front of him. He stopped and lifted little John in his arms, and after a moment put him down and embraced Ruth.

"Well, I see ye still love the tender embrace o' the wheelbarrow," said Mr. Hacket, as we approached the Senator.

"My embrace is the tenderer of the two," the latter laughed with a look at his hands.

He recognized me and seized my two hands and shook them as he said:

"Upon my word, here is my friend Bart. I was not looking for you here."

He put his hand on my head, now higher than his shoulder, and said: "I was not looking for you here."

He moved his hand down some inches and added: "I was looking for you down there. You can't tell where you'll find these youngsters if you leave them a while."

"We are all forever moving," said the schoolmaster. "No man is ever two days in the same altitude unless he's a Whig."

"Or a born fool," the Senator laughed with a subtlety which I did not then appreciate.

He asked about my aunt and uncle and expressed joy at learning that I was now under Mr. Hacket.

"I shall be here for a number of weeks," he said, "and I shall want to see you often. Maybe we'll go hunting some Saturday."

We bade him good morning and he went on with his wheelbarrow, which was loaded, I remember, with stout sacks of meal and flour.

We went to the school at half past eight. What a thrilling place it was, with its seventy-eight children and its three rooms. My legs encased in the tow breeches felt as if they were on fire. My timidity was increased by the fact that many were observing me and that my appearance seemed to inspire sundry, sly remarks. I saw that most of the village boys were boughten clothes and fine boots. Sally Dunkelberg came in with some other girls and pretended not to see me. That was the hardest blow I suffered.

AMONG the handsome, well-dressed boys of the village was Henry Wills—the boy who had stolen my watermelon. I had never forgiven him for that or for killing my hen. The bell rang and we marched into the big room. Henry and another boy tried to shove me out of line, and after we were seated a cross-eyed, freckled girl in red dress made a face at me.

It was, on the whole, the unhappiest day of my life. It reminded me of Captain Cook's account of his first day with a barbaric tribe on one of the South Sea Islands. During recess I slapped a boy's face for calling me a rabbit and the two others who came to help him went away full of fear and astonishment, for I had the strength of a young moose in me those days. After that they began to make friends with me.

In the noon hour a man came to me in the school yard with a subpoena for the examination of Amos Grimshaw and explained its meaning. He also said that Bishop Perkins, the district attorney, would call to see me that evening.

While I was talking with this man Sally passed me walking with another girl and said:

"Hello, Bart!"

I observed that Henry Wills joined them and walked down the street at the side of Sally. I got my first pang of jealousy then.

When school was out that afternoon Mr. Hacket said I could have an hour to see the sights of the village, so I set out, feeling much depressed. My self-confidence had vanished. I was homesick and felt terribly alone. I passed the jail and stopped and looked at its grated windows and thought of Amos and wondered if he were really a murderer.

I walked toward the house of Mr. Wright and saw him digging potatoes in the garden and went in. I knew that he was my friend.

"Well, Bart, how do you like school?" as asked.

"Not very well," I answered.

"Of course not! It's new to you now, and you miss your aunt and uncle. Stick to it. You'll make friends and get interested before long."

"I want to go home," I declared.

"Now let's look at the compass," he suggested. "You're lost for a minute and, like all lost people, you're heading the wrong way. Don't be misled by selfishness. Forget what you want to do and think of what we want you to do. We want you to make a man of yourself. You must do it for the sake of those dear people who have done so much for you. The needle points toward the schoolhouse yonder."

He went on with his work, and, as I walked away, I understood that the needle he referred to was my conscience.

As I neared the schoolmaster's the same drunken man that I had seen before went zigzaggin up the road.

Mr. Hacket stood in his dooryard.

"Who is that?" I asked.

"Nick Tubbs—the village drunkard and sign o' the times," he answered. "Does chores at the tavern all day and goes home at night filled with his earnings an' a great sense o' proprietorship. He is the top flower on the bush."

(To be continued next week)

Twins were recently born to Iowa parents by the name of Peck. We don't imagine it will be out of the way to report the arrival of a half bushel of children.—Russell Record.

I wonder why it is a girl can't catch a ball like a man.

Oh, a man is so much bigger and easier to catch—Baseball Magazine

What Farmers Sold in '49

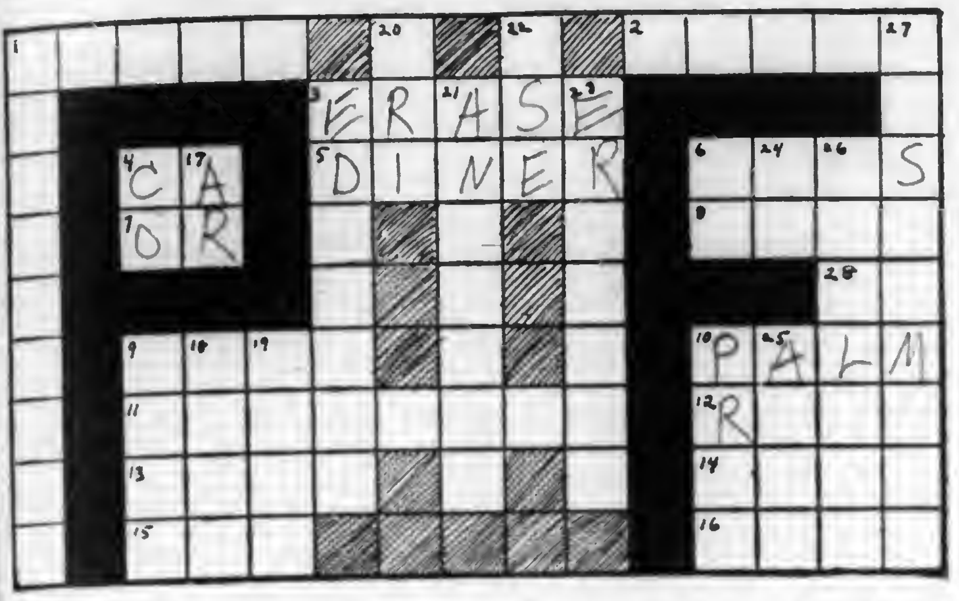
JAS. MOODY has a copy of a bill of a farm sale, purported to have been held in the year 1849. It was given to Mr. Moody by his son-in-law, Dr. T. V. Boyd, of East St. Louis, who in turn had received it from his mother who resides at Anna, Ill. The sale bill reads as follows:

Having sold my farm, and as I am leaving for Oregon territory by oxen team on March 1, 1849, I will sell all my personal property, except two oxen teams, Buck and Ben, Lon and Jerry, consisting of the following: Two milk cows, 1 grey mare and colt, 1 pair of oxen, 1 yoke, 1 baby yoke, 2 ox carts, 1 iron plow with wood mole board, 800 feet of poplar weather boards, 1000 three-foot clap boards, 1500 10-foot fence rails, 1 60-gallon soap kettle, 85 sugar troughs made of white ash timber, 10 gallons of maple syrup, 2 spinning wheels, 30 pounds mutton tallow, 1 large loom made by Jerry Wilson, 300 poles, 100 split hoops, 100 empty barrels, 1 32-gallon barrel of Johnson-Miller Whiskey 7 years old, 20 gallons of apple brandy, 1 40-gallon copper still, 4 sides of oak tanned leather, 1 dozen wooden pitchforks, a one-half interest in tan yards, 1 32-caliber rifle, bullet molds and powder horn, rifle made by Ben Miller, 50 gallons of soft soap, hams, bacon and lard, 40 gallons of sorghum molasses, 6 head of fox hounds, all soft mouthed but one.

At the same time I will sell my 6 negro slaves: 2 men, 35 and 50 years old; 2 boys, 12 and 18 years old; 2 mullatto wenches, 40 and 30 years old. Will sell all together to same party, as I will not separate them.

Terms of sale: Cash in hand or note to draw 4 per cent interest with Bob McConnel security. My home is 2 miles south of Versailles, Kentucky, on McConnel Ferry pike. Sale will begin at 8 o'clock A. M. Plenty to eat and drink.—St. Louis Daily Livestock Reporter.

Our Weekly Cross Word Puzzle



To solve this puzzle, fill the white squares with letters forming the words defined in the lists given below. For example: 1 (reading across) is CHAFF, and 3 (reading down) is EDUCATE. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters which are common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. Husk of grain
2. A vegetable organism
3. To obliterate by scratching or blotting out
4. County Agent, abbreviation
5. One who eats his dinner
6. The shelter for a driver of a locomotive (plural)
7. A preposition
8. Small balls of lead for killing game
9. Any defined extent of land-surface
10. The inside of the hand
11. To confuse or bewilder
12. To be conveyed from one place to another
13. A stupefying drug
14. Paradise
15. A pen or enclosure for swine
16. Saucy or forward
28. University of Arizona, abbreviation
18. An uproar or tumult
19. To see at a distance
20. A day of the week, abbreviation
21. A breed of chickens, plural
22. To avail oneself of
23. Learned, scholarly
24. Exclamation
25. An assistant
26. Huge rock worn by action of the water
27. One of the two great divisions of the Bible

READING DOWN

1. What we expect the other fellow to do
3. What we expect our school teachers to do
6. Civil Service, abbreviation
9. Increases or sums up
18. Preposition
17. Indefinite article

Goodyear HEAVY DUTY Cord Tires, for passenger cars, buses and trucks, are available from Goodyear Dealers in the following sizes:
30 x 3½ (Cl.) 34 x 4½ (S.S.)
32 x 4 (S.S.) 30 x 5 "
33 x 4 " 33 x 5 "
32 x 4½ " 34 x 5 "
35 x 5 (S.S.)

For those who desire balloon tires Goodyear makes a completeline, including the HEAVY DUTY type in certain sizes.

Here's a whale of a tire for rough roads and hard driving — the new Goodyear HEAVY DUTY Cord Tire. Thicker, tougher, more massive all through. The stout sidewalls reinforced against rut-wear. The powerful carcass made of SUPERTWIST. A good many motorists *need* this HEAVY DUTY Goodyear. How about you?

Goodyear Means Good Wear

Lucas Tinted Gloss Paint

IT COVERS
more square feet per gallon and more thoroughly hides the surface, due to finer grinding of materials, a higher percentage of pure linseed oil, and *LUCAS* superior methods of combining all ingredients into one perfectly finished product.

IT BEAUTIFIES
and its beauty lasts because of its high gloss and clear, perfect shades, made with pure tinting colors of *Lucas'* own manufacture, possessing maximum permanency.

IT LASTS
longer because it is made of highest grade materials, carefully selected, scientifically combined by skilled workers of long experience.

IT PROTECTS
positively because its smooth, glossy surface is resistant to weather. Its elasticity prevents checking or cracking during temperature changes, consequently preventing moisture, the cause of decay, from getting to the underlying surface.

IT IS ECONOMICAL
Its GREATER COVERING CAPACITY reduces the cost of application.
Its GREATER LASTING QUALITY decreases the cost per year of protection.
Its GREATER PROTECTION saves costly repairs.
Its GREATER BEAUTY increases the value of your property, reflects prosperity and radiates happiness.

You can preserve your property on convenient time payments. Ask the *Lucas* dealer in your community or write us for name of nearest dealer.

Asks about Child Labor

IN PENNSYLVANIA FARMER for January 24th I read a letter by Nora Del Smith Gumble in which she appears to be opposed to the ratification of the Child Labor Amendment. I should like to ask her some questions which I hope she will answer thru the columns of this paper.

1. Have you read the amendment or are you getting your ideas second hand?

2. Do you believe that persons under sixteen should be allowed to work in mines and quarries?

3. Do you believe that those between fourteen and sixteen should work more than eight hours a day or at night?

The Amendment Is Not a Law

These were the two restrictions which Congress twice tried to place on the labor of children. Both laws were declared unconstitutional. The Twentieth Amendment is not a law, —it merely empowers Congress to legislate on that subject.

You say, "Let the states do it." How about the children in the states which do not do it? Are their lives any less valuable than those of the children in the states which protect them? Or do you approve of children between fourteen and sixteen working ten hours a day and fifty-five hours a week, as in South Carolina?

Or ten hours a day and sixty hours a week in Louisiana?

Or of those fourteen and one-half years old working all night, as in Georgia? These states have all had opportunities to pass better laws and have not done so.

You suggest that welfare workers should content themselves with bringing up children of their own. What would be the use should they happen to live in Georgia? Further, some of these workers have, and among them are to be found the most ardent supporters of this amendment. Florence Kelley, daughter of the late William Darrah Kelley, of Philadelphia, is a grandmother, and working enthusiastically for the amendment.

You seem to imply that part of the enthusiasm for the amendment is due to the desire for jobs. Is this why the late Presidents Wilson and Harding advocated such an amendment? Or has it inspired President Coolidge? Certainly you can hardly accuse the National League of Women Voters, the General Federation of Women's Club, the W. C. T. U. or the Y. W. C. A. of such a motive. With as good grace could its advocates accuse the National Association of Manufacturers for opposing it on the ground that they think they can get rich quicker with the labor of children.—Adelaide Gemberling, Mercer County, N. J.

Change the Tax System

IN THE Washington County notes in the January 31st issue Mr. McN. speaks about the high school taxes caused by the large number of foreign children in his neighborhood. Our district also has a large foreign population due to the lime quarries and farm labor families. One school has seventy pupils, while a little further on we have two schools combined as one with only twenty pupils. The latter neighborhood is a strictly farming community and the farmers are middle-aged people with few children.

For three years we have levied a tax of five dollars upon men and women alike, or ten dollars from a family. They generally have a boarder or two and we get them when we can. The married families are permanent residents and pay their taxes as readily as most of the native-born. If we taxed them only one dollar each that would make a difference of eight dollars per family. Other districts are waking up to the idea.

Flaws in the System

Our fathers at Harrisburg should wake up to the fact as to how taxes affect the taxpayer in rural districts. A steel plant that changed hands a few years ago for $18,000,000 is still assessed at one-fourth its original value. The assessor cannot help himself as he cannot assess a machine. If we sell our horses and buy tractors we escape a tax on motive power.

I know another flaw in our tax system. I am acquainted with a railroad man who makes seven dollars in a three-hour day and pays ten dollars per week board. His home is in Philadelphia and he pays fifty cents tax per year. Why not put a state tax upon all such?

Foreigners marry young and have large families while native-born marry late and have few or no children. We are educating boys and girls to work for the big industries and then wonder what is wrong with our American home life. It looks as if we would have a different view of education twenty-five years hence.—R. D., Chester County, Pa.

Another View on Potato Prices

Editors' Note:—The article by Daniel Dean, published in our issues of January 17 and 24, has brought forth the interesting letter which we publish below. We would call attention to the following sentence from Mr. Dean's article which our Potter County correspondent evidently overlooked: "When the number of bushels, 454,784,000 (produced in 1924), is divided by the number of people, it will be seen that there are less than four bushels for each person to provide for eating, for seed to plant, and for the natural loss by shrinkage in storage."

EDITOR PENNSYLVANIA FARMER:—The article, "Those 1924 Potato Prices," by Mr. Daniel Dean, concluded in your issue of January 24, seems to be intended as a justification on the part of the potato growers of the United States for the production in 1924 of what is considered by dealers and consumers as a "record breaking crop," hence a sufficient reason for keeping the price below the cost of production for most growers.

It also seems to be a plea for the continuance during 1925 and succeeding years of what is regarded by those who set the price of potatoes as an over production, simply because the per capita production has not exceeded four bushels, which Mr. Dean, and many others, think every man, woman and child should eat per annum.

The fact is there are many thousands of persons in our country who do not eat potatoes. There must be ten million babies, more or less, in the United States who do not eat potatoes. In the southern states there are few people who eat "Irish" potatoes. They raise them for sale in northern markets, but when it comes to eating they prefer sweet potatoes. The people of the United States never did and never will consume four bushels of potatoes per capita.

Few Foreign Outlets Now

It will be found upon investigation that during those years when the per capita production exceeded the 1924 yield we had an export market for all or part of our surplus potatoes. We do not have it now. And since American farm machinery and American cultural methods have been adopted by foreign farmers, enabling them to produce more per man than we do, there seems to be no reasonable ground for hope of future foreign markets for our surplus potato crop, except in case of a crop failure elsewhere.

Any business which depends for success upon the failure of those in other lands who are engaged in the same business rests upon a very shaky and unstable foundation.

Of the 1924 crop several hundred thousand bushels must have been frozen. There were about a hundred million bushels of seconds and culls which cannot be marketed. These will be fed to stock. There will be shrinkage in storage and a considerable amount of bin rot. From thirty to forty million bushels will be needed to plant to raise another bumper crop to be sold at less than cost of production in the fall and winter of 1925 and 1926.

Overproduction the Cause

Of the 454 million bushels of the 1924 crop less than 300 millions will reach the market. Yet the market is overstocked, and the price is low, with excellent prospects of its remaining low, or going still lower, before the Florida crop starts moving northward in about five weeks. This is the result of overproduction. The average per capita consumption of table stock in the United States is much more nearly two bushels than four,—perhaps about two and a half bushels.

We have had considerable cold weather in January, but it has not caused an increase of consumption as some people assert. Under date of January 23 one of the largest potato dealers in New York City writes, "We have yours of January 20th, and replying thereto, would advise you that due to the cold snap there is no market and no demand, with but few arrivals." A continued cold spell will curtail shipments, as potatoes cannot be moved from storage cellars to cars over any considerable distance during extremely cold weather, but it also decreases consumption, tho if continued long enough may temporarily raise the price thru scarcity at market points.

New Laws Will Not Help

The question arises: How can growers get a price for their potatoes that will allow them a fair return for the labor and expense of raising and marketing them? The politicians talk much about laws to aid agriculture. Statutory laws can do but little good, and in some cases may do harm. The old law of supply and demand will defeat all makeshift laws a legislature can enact. It is always on the job. It is as potent now as when Adam Smith discovered it and wrote about it.

In these days we hear much about co-operative marketing. Co-operation is a good thing. I believe in it. But all the co-operative marketing organizations in existence combined with all those yet to be formed could not sell potatoes profitably on a glutted market. I have known members of such organizations who have sold their potatoes on an outside market, paid the co-operative association six cents a bushel as a penalty for outside selling and still received a higher net return than they could have realized by selling thru the association with its high overhead expenses.

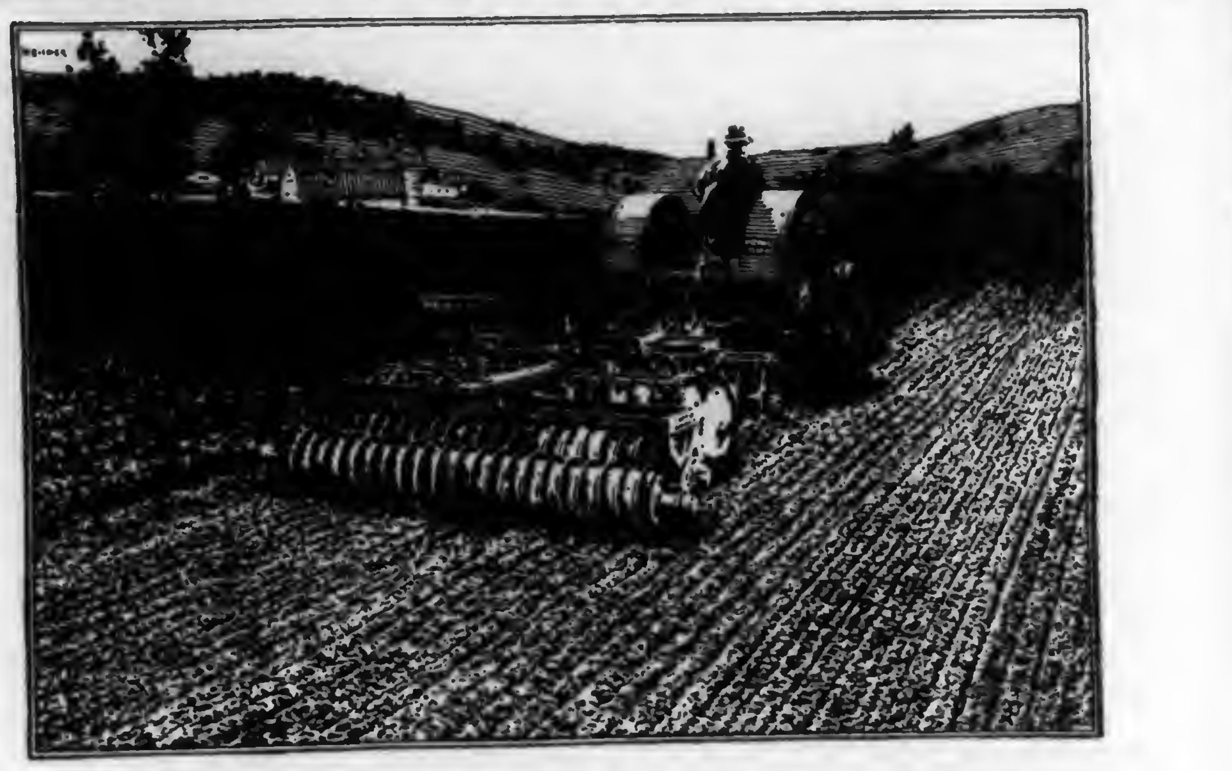
McCORMICK-DEERING TILLAGE TOOLS



Heavy Yields Follow Good Tillage

and Here Are Three Profit-Making Implements

The McCormick-Deering Disk Harrow is a simple and efficient implement, built and trussed like a steel bridge, to serve many years. You will like the details and conveniences—the dust-proof bearings and the bearing oil cups set above the frame, the built-in angle-steel weight boxes, the oscillating disk scrapers, the forecarriage, etc. Made in sizes for everybody—4 to 10 feet. All sizes can be equipped with tandem attachment. Double disking more than pays for itself.

The McCormick-Deering Leverless Disk Harrow is a genuine tractor disk, not a made-over horse harrow. It is built for heaviest duty. It is controlled entirely from the driver's seat, without levers, yet it is very simple. Merely backing the tractor automatically sets the angle of both front and rear gangs. When the tractor starts forward the gangs hold that angle until released by a pull on the rope. In 5 to 10-foot sizes to fit your power.

The Dunham Culti-Packer shown above with the leverless disk harrow has no equal as a seed-bed finisher. It pulverizes the soil, fills out air spaces, and saves moisture content. Following the drill, it helps the little plants to get a quick start, firmly set in finely mulched soil. Use it to prevent winter-killing of wheat; to rejuvenate meadows, etc. It is far ahead of a roller for small grains. Made in eight sizes, for horse or tractor use.

McCormick-Deering Tillage Tools combine these essentials — good work, long life and convenience. They are of practical design, their construction being based on ninety-three years of farm and factory experience. They are priced on the basis of economical quantity production, and as an investment they offer you attractive returns. *To fill all your Tillage Tool needs see the McCormick-Deering dealer. It Pays!*

Markets

PHILADELPHIA MARKETS

February 16, 1925.

PRODUCE

With but few exceptions the supplies of various kinds of vegetables are rather heavy on our market, and prices in many instances are ruling weaker and lower. Among the vegetables in more liberal supplies may be noted: potatoes, onions, lettuce, cabbage, spinach, cauliflower and parsley. Among the scarce vegetables may be noted: beans, lima beans, peas, peppers and tomatoes.

County News and Comment

Bradford County, Pa.—We are now in the [illegible] of old man Winter. Thermometer registers the coldest it has for twenty-one years, [illegible]ding to statistics; ten degrees below is common and it has fallen to twenty- [illegible] below a number of times. Snow two [illegible] deep on the level; seventeen inches fell [illegible]ing the last storm. Hill roads are badly [illegible]ted. Traffic for the last week has been [illegible] light. Considerable complaint is heard [illegible] the scraping of the concrete roads. [illegible]mers in the country cannot get out with [illegible] and cannot haul with sleighs on the concrete. Hay crop is moving very slow. Price is $14 to $16 ton. Radio sets still [illegible]ning in popularity.—G. E. E., Feb. 4.

Broome County, N. Y.—The snow here is [illegible] feet deep in the meadows and four in [illegible] woods. The old bear did not see his [illegible]ow. We have had week after week of [illegible] and near zero weather. Farmers are [illegible] hard times financially. Many are [illegible]ing money by selling wood and mine [illegible]. We were in the direct path of the [illegible] and it was surely an inspiring sight. [illegible] moving picture company was in Bing[illegible]ton to take pictures. Local stores pay [illegible] for eggs and 46c for butter. Hay, $8@ [illegible] a ton in the barn.—E. M. C., Feb. 7.

Centre County, Pa.—Temperature reported [illegible] low as 30 degrees below zero in some [illegible]. For the last several days we have had [illegible] sunshine. Blue-birds have arrived, [illegible] don't take off your "heavies" yet. Agri[illegible] census about all taken. A few enum[illegible] have not finished up by appointed [illegible] because of drifted roads. Health is gen[illegible] good. One census enumerator said in [illegible] townships and two boroughs he had [illegible] only one person bedfast. We are to [illegible] the state road completed thru our coun[illegible] this year. It will start at the state road [illegible] Snow Shoe Intersection and reach up the [illegible] Eagle Valley and connect with the state [illegible] at Bald Eagle. Markets: wheat, $2.05; [illegible] $1.20; corn, $1.20; barley, $1; oats, [illegible]; butter, 40c; eggs, 45c; lard, 18c.—A., [illegible] 10.

[illegible] **County, Pa.**—During the whole [illegible] of 1925 until a few days ago it has [illegible] snow and more snow. During the long [illegible] spell the rabbits and mice have done [illegible]timable damage to fruit trees. Even the [illegible] of several years' growth have suffered [illegible] deal. The local market for potatoes [illegible] apples has advanced under these ex[illegible] weather conditions. Potatoes retailing [illegible] $1.40, wholesale at the farm, $1@1.25, [illegible] the local supply practically all sold. [illegible]ples retail from $1.50@2 bu. Eggs, 60@ [illegible]. Farmers have not been able to do any[illegible] toward spring work except getting [illegible] wood supply. Grange meetings are the [illegible] farmers' meetings being held with good attendance. Radios are installed in nearly every home and are surely appreciated these long winter evenings.—F. G. H., Feb. 13.

Indiana County, Pa.—It is very evident here that the groundhog did not see his shadow for we are having late spring weather with a rising temperature, now at about forty-five or fifty degrees. The snow has not as yet all melted away. We had our heaviest snow in the latter part of January. It is said to have been the heaviest in years. For three years there has not been any February plowing and we are hoping now, since we are having these fine days, that we can get a little done. Wheat and hogs are rising along with bigger markets but hay still stays very low. It is said that there are more men idle this year in the town of Indiana than for many years. This is probably due to the fact that the mines are closed.—H. A. N., Feb. 10.

Lancaster County, Pa.—Damp and foggy for two days, snow almost all gone except some drifts in by-roads. State highways cleaned off by modern snow plow operated by caterpillar tractor. Not much frost in ground. Wheat looks well, being covered for six weeks. Tobacco about two-thirds stripped, not much sold as yet. The Lancaster County tobacco growers' association are urging growers to hold for at least a fair price. Farmers much concerned about corn for seed. Wheat market declined 10@12c, top price was $2.02; new corn, $1.30@1.50; straw, $14@17; fat hogs, 12c; chickens, 25c for heavy; eggs, 45c for best white.—C. R. E., Feb. 13.

Lawrence County, Pa.—We are enjoying an old time winter, a continuation of snow, ice and cold weather. Not a few farmers were caught with unshod horses when the roads became one solid bed of ice. It meant some skirmishing for those who were short on fuel and feed. However, no serious results have been reported as yet. Stock wintering well. Milk prices still too low. Too much work, and money for feed, with small income. Wheat stands firm at $2; rye, $1.05; oats, 70c; corn, 55c; timothy hay, $15; clover, $17.50; country butter, 50c; eggs, 70c.—M. L. V., Feb. 3.

Northumberland County, Pa.—An old-fashioned winter again, the weather being unusually cold with very heavy snows. Many dirt roads are drifted full and impassable. Many farmers hauling water for stock as their wells and cisterns are dry. Much of the wheat on the farms was sold the past week at $2.10 per bushel. Hogs and pigs scarce, many farms without sows or pigs. Fewer public sales scheduled this year than for several years past. East and West Chillisquaque Townships have ninety per cent of the cattle owners signed up for the modified area plan of tuberculosis eradication. Three other townships are expected to follow in the near future. Prices: corn, $1.15; oats, 60c; potatoes, 75c; hay, 15c; pork, 15c; eggs, 50c; three per cent milk, $1.90.—W. C. G., Feb. 9.

Passaic County, N. J.—The month of January was very cold with lots of snow but February has started in mild with plenty of foggy weather. The snow is losing very slowly as there is a lot of ice mixed with it.

Roads are in a fair condition where they have been plowed. The Richfield section have started hot beds. Markets at Paterson are small and slow as very few buyers come down to the market on account of the poor condition of the streets. Forced rhubarb was in market last Friday, bringing $1.50 doz.—N. D., Feb. 10.

Perry County, Pa.—During the month of January wheat reached a price ranging from $2.05 to $2.18 and most of the farmers shoved a good portion of their small crops on the market. The price has dropped to $1.90 here. Quite a bit of interest shown in the Farm Products Show at Harrisburg. The dairymen of the county showing quite a bit of interest in cow testing and tuberculosis eradication work. They are just waiting for the legislature at Harrisburg to provide the funds and the Animal Husbandry Department to do the work. Prices: wheat, $1.90; potatoes, $1; veal, 11c; eggs, 40c; corn, $1.65; butter, 55c; hogs, 10c live; milk, $2.67, League price, for four per cent butterfat delivered at Duncannon.—J. L. B., Feb. 9.

Susquehanna County, Pa.—The coldest weather the last three days of January that can be recalled since 1888 when we had our first real blizzard. The thermometer registered thirty-two at Salt Springs and 38 at Rush. The R. F. D. men were not able to make their full trips until February 3. The ice cut on Silver Lake is clear as crystal and bright as a silver dollar from which the lake received its name. Meadow land covered with snow so far, so no serious damage has been done to hay. Monthly Alliance and Grange day meetings, inviting the ladies to bring full baskets and all enjoy a good free dinner, about the only events of interest since the blizzard. Eggs, 48c; pork, 17c; hay, $15; potatoes, 75c; apples, $1; chickens, 25c.—J. A. G., Jan. 4.

Tioga County, Pa.—Several warm days reduced the huge snow banks which made travel difficult since the big snow storm January 29. The heavy storm followed by winds, packed the roads until schools were closed in many places on the 30th, and rural mail carriers have had difficulty in covering their routes ever since. Sleighing for nearly four weeks with zero weather much of the time. Farmers harvesting ice in many localities. Those farmers who deliver milk to the Elkland and Wellsboro condenseries are planning to produce Grade B milk. The recent meeting of the Dairymen's League Co-operative Association at Tioga was very largely attended. Prices of eggs dropped to 34 and 37 cents. During the month of January they averaged around 50c which was 9@12c higher than during January 1923 and 1924. Butter, 40@50c; wheat middlings, $2.50; corn, $3; bran, $2.15.—P. W. L., Feb. 9.

Warren County, Pa.—Snappy winter, the thermometer registering from zero to twenty below most of the time. The deep snow made foraging hard for deer, and many residents of the county are carrying hay to the hills for them as they have been crowding into outlying settlements in search of food. Many also feeding the birds. "Remember the birds when the snow flies," is a slogan for all farmers to remember.—H. C. J., Feb. 6.

Tobacco Markets

THE Pennsylvania cigar leaf tobacco market has enjoyed a stormy but inactive week. The storm centered about the question of co-operative marketing, with much discussion (pro and con) and a possibility of definite action at the annual meeting of the Lancaster County Farm Bureau which will be held February 19.

The market on 1923 tobacco in the hands of the packers has been at a standstill for several weeks. Sales totaling about 100 acres of the 1924 crop are reported in the extreme northern section of the county, prices running from 14c to 20c. Other scattered sales thruout northern Lancaster County are also reported, at about the same prices. The buying has been done by small, independent country packers.

Any buying move on the part of the big manufacturer's representatives will be the signal for a general buying movement. Unconfirmed reports are abroad to the effect that these big concerns plan getting into the county as soon as weather conditions permit. No hint has been dropped as to a possible price for the crop. Tobacco men generally agree that the price is apt to cover a fairly wide range, as the quality of the 1924 leaf varies greatly.—Garden Spot Farmer.

The Milker You've Been Hunting For Is HERE

It is the **Empire Electric Milker.** It uses the standard time-tested Empire Units with all their exclusive advantages. And—this is the important thing—*it makes machine milking profitable for the man with as few as six cows.*

Empire Advantages

1. Teat cup lining is hand made and has linen inserts. Basic Empire patents cover these teat cups—they give the only complete three-sided massage, duplicating the calf's suck.
2. Standard Empire Milker Units used with Empire Electric or Engine type Pumping Outfits provide a practical size for every dairy of 6 or more cows.
3. Single or double units to meet your requirements.
4. Durable rubber parts that stand boiling.
5. Single pipe line with no complicated or moving parts to wear and get out of order. Clean. Costs less.
6. The Simple Pulsator guaranteed 4 years against wear. Only one Pulsator needed for single or double unit.
7. Low power cost—¼ H. P. outfit milks 2 cows at once—larger sizes proportionately economical.
8. Sanitary claw with automatic shut off and without moving parts to wear and get out of adjustment.

The Machine to Meet Every Dairyman's Requirements

It is not only moderate in first cost but exceedingly economical in operation. A ¼ h. p. motor works one Double Empire Unit, milking two cows at once. (For two Double Units only ½ h. p. is needed.)

Like all Empire Milkers it has the patent linen Teat Cup Inserts massaging the teat completely from tip to udder after each suck. Nature's way—the calf's way—the way the cow is used to being milked.

You can do away with hand milking now. You can quit worrying about the scarcity of good help.

The milker you've been waiting for has come. See it at the nearest Empire agent's. Write for free catalog No. 33 that tells all about it.

A size for every Dairy **EMPIRE** TRADE-MARK REG'D. **Milking Machines** For any kind of Power

View on Potato Prices

(Continued from page 33)

Co-operative marketing alone will not turn the trick.

What we need is not co-operative marketing but co-operative production, such as is maintained by the manufacturers. Marketing will take care of itself. If an article is in sufficient demand buyers will come to you and pay a good price. Manufacturers of farm machinery know approximately, and almost exactly, any year, how many machines of any certain type they can sell the following year.

Need Co-operation in Production

It is not the tens of thousands of small growers who plant from three to ten acres of potatoes that have caused the damage. It is the big, get-rich-quick growers who have been planting from 100 to 300 acres who have ruined the potato business. We read in Pennsylvania Farmer a few weeks ago about the awful plight of the Maine growers. Are they not largely to blame for it themselves? A grower from Maine, visiting in this locality recently, stated that in his county the potato growers had for three years been doubling their acreage each year, hoping to make up their losses when a year of good prices should come. Had they followed the opposite policy of planting half as many acres each year they would have been helping to bring back good prices. It is much better to raise 500 bushels at one dollar a bushel than 2000 bushels at thirty cents. What the grower gets above forty cents represents his profit. If the price falls below forty cents he is heading for the poor house.

Who Sets the Price?

The potato farmer is not in a position to set the price of his product. The price is set by the dealers and consumers. If the estimated crop is high they set the price low, and stick to it, for they know the crop is perishable and must be sold. If the estimated yield is low, they set the price high, for they want the potatoes. They cannot be deceived as to the acreage planted. They know long before digging time about what the yield will be. An obliging government informs them monthly as to the activities of the farmers.

The only salvation I see for the potato grower is to plant fewer acres, use the best known cultural methods, plant only the best seed to be obtained, treat the seed and spray the vines, thus increasing the yield per acre and reducing the cost of production. The grower who increases or fails to diminish his total production is helping to put himself and his neighbors into bankruptcy.—W. L. G., Potter County, Pa., January 27.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

UNTHRIFTY HORSES.—My horses are all thin, rough coated and occasionally pass few worms. What shall I do for them?—W. B. S., Chambersburg, Pa. Increase their grain ration, feed some roots, groom them daily; also give each horse a tablespoonful of powdered gentian at dose in ground feed twice a day.

THOROUGHPIN.—My mule has thoroughpin, but only shows lameness after resting several days. What can I apply to take out some of the soreness? I do not care to have bunch reduced.—O. H., Felton, Pa. Apply equal parts tincture of iodin and spirits of camphor to bunch every evening.

SORE NECK—NASAL CATARRH.—I have a pair of horses fourteen years old that have old sores on top of neck, which are not painful, but itchy. I also have another horse with nasal discharge, coughs after drinking, but while working his wind seems to be all right.—J. I. M., Linesville, Pa. Apply one part salicylic acid, mixed with eight parts vaseline, to sore daily. Give your other horse one dram of powdered sulphate of iron, two drams of powdered gentian in ground feed two or three times a day.

HEIFER FAILS TO COME IN HEAT.—I have a heifer two years old that does not come in heat. What can be done for her?—C. W. S., Elmira, N. Y. Yohimbine hydrochloride is the best remedy and it should be given three times a day. The dose for cattle is from one, to one and one-half grains. This is an expensive drug. You may try giving her fifty drops of fluid extract of nux vomica at dose in feed or in drinking water three times a day. If she has twin brother she will never breed.

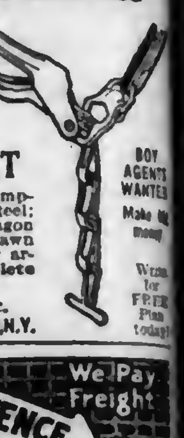
W. O. H., Amity, Pa.—The above treatment is suitable for your nineteen-month old heifer that has never been in heat.

BUNCH ON SHOULDER.—I have a cow which I think got hurt by another cow bumping her in the yard. She was very lame on her right front leg for about a week. I applied equal parts of lard, kerosene and turpentine. She limps very little now, but there is a large lump left on the joint, about the size of an orange, which is quite hard. The joint which I have reference to is up on her shoulder at the lower edge of her body on the front side of the leg. Do you suppose her leg was partly dislocated at this joint? Can you tell me something that will remove this lump as it will spoil the sale of my cow?—W. W. B., Newville, Pa. The shoulder was bruised and joint sprained. Clip off hair, apply one part red iodide of mercury and five parts fresh lard to bunch every week. This ointment should be well rubbed in, the cow hitched so as to prevent her licking bunch after this medicine has been applied. In order to obtain good results this treatment must be kept up for some time.

GARGET.—What can be done for cow giving thick stringy milk? This ailment started about two weeks ago in the right hind quarter, moving to right front quarter and now it is back in hind quarter. The udder is some swollen and a little feverish. My cows are not tuberculin tested. Has she symptoms of tuberculosis?—H. E. F., South Fork, Pa. She suffers from mammitis, not tuberculosis. Foment udder with warm water, apply one part fluid extract of phytolacca, eight parts olive oil to affected quarters twice a day. Give her one-half ounce of fluid extract of phytolacca at dose two or three times a day. Her milk is not fit for your family. Milk her four or five times daily.

OUT OF CONDITION.—Have a cow with fairly good appetite, drinks lots of water, but she is growing thin. I suppose she has kidney trouble. Her front leg is swelled above the knee and is quite painful. Her milk soon changes.—W. F. C., Paxinos, Pa. Apply camphorated oil to sore leg twice a day. Give her two drams of acetate of potash in drinking water three times a day. A change of feed will help her.

BLEEDING WART.—I have a three-year-old heifer that has a bunch on top of left shoulder the size of a hickory nut which bleeds on an average of once a week. This started about six weeks ago and each time bleeds at least a quart. This heifer is carrying her first calf.—A. R. M., Troupsburg, N. Y. Apply Monsol's solution of iron to bunch twice a day.



ONLY 50c To End Broken Hame Strap Troubles

Premax Hame Fastener is the only flat link fastener: quick, easy lever method of adjustment; pressed steel with rust-proof finish; adjustable—never too tight or too loose; spring snap—cannot drop off when harness is removed. Send 50c for a pair.

SEED POTATOES—Certified Russet Rurals, very vigorous, high yields. Paul R. Smith, Ulysses, Pa.

Niagara DUSTS and DUSTERS

Protect Fruit and Crops Economically

Here are the plain facts that prove that the Niagara method is the most economical and produces fruit of the highest market value.

Maine Department of Agriculture, Bulletin Vol. 17, No. 3

"The cost of material for dusting is about twice as great as for liquid spraying, but the cost of making an application of dust is much less than for one of spray. In general, the total cost per tree is about the same. Such a statement, however, does not take into consideration the time and labor saved, nor that the orchard may receive a complete treatment at a critical period."

Ordinarily the grower thinks of his material and his labor as two factors that enter into the cost of protecting his fruit either with dust or spray. But when he sprays, he pays for 6 or 7 times as much gasoline and oil. Much more interest and depreciation on his investment and much larger repair bills to say nothing of 5 to 10 times as many hours work. For according to the Cornell Experiment Station, Manual of Fruit Diseases by Prof. L. P. Hesler and H. H. Whetzel, "An orchard may be dusted in one-fifth to one-tenth the time required for spraying same."

Then remember dusting gives the highest finish to apples.

N. Y. Experiment Station

"From the standpoint of finish and lustre of the fruit, the apples dusted with sulphur were superior to those sprayed with lime-sulphur and were unexcelled by the fruit from any of the other treated plots. Jour. Econ. Ent. Vol. 17, No. 2."

Now, Just a word About Niagara Dusters Themselves

Niagaras are simple, strong, practical. The result of 9 years of actual use in orchard and field where every part has had to stand the real working test and do its job in the best possible way. Remember both Power and Traction Crop Dusters can be fitted with attachments to convert them into Orchard Dusters and the Fruit Duster can be equipped with a crop attachment.

Every grower will find it to his advantage to investigate the Niagara Method thoroughly and find out how to save money, time and crops by getting the right Niagara for his farm. *Talk with your dealer or write us.*

Some Soil Fertility Questions

Answered by Dr. J. G. LIPMAN

Green Manure Crops

I have a piece of land of about twenty acres, that is well limed, but I have no available supply of manure. What shall I sow to equal manure? I intend to plant corn and oats this spring. Would sweet clover sown in corn at last cultivation be advisable, or would you suggest something better? I have no grass set for hay next harvest. What shall I sow this spring to insure a crop of hay the same season?—E. E. P., Carroll County, Md.

Sweet clover sown in corn at the time of the last cultivation should give you a good growth of clover to plow under in the following spring. If preferred, a mixture of rye and winter vetch may be used instead. A mixture consisting of about one bushel of rye and twenty to thirty pounds of vetch seed is usually recommended for the purpose.

A good supply of forage early in the season may be obtained by sowing oats alone or a mixture of oats and Canada field peas. On medium or heavy soils a production of two to three tons per acre of oat and pea hay is not unusual. For lighter soils barley may be used instead of oats. If the cost of Canada field pea seed is too high, oats or barley alone may be used. The hay will be quite nutritious, even tho not as rich in protein as mixed oat and pea hay.

Troubled by Wire Worms

Had a four-acre potato patch last season. It was clover sod. The hay was very weedy, so we left the worst on the ground. The patch was manured with barnyard manure along after haymaking until fall. Half of the patch was plowed in the fall and fertilized with a 4-8-4 mixture. The other half was plowed in spring and fertilized with a 2-8-5 mixture.

The whole patch was cared for the same. On the fall plowed half the yield averaged 381 bushels per acre. On the spring plowed half it averaged 313 bushels per acre. We planted all Michigan Russets, certified, one year ago. The quality was excellent and we found quite a ready sale. The only fault found was that the potatoes were eaten by wire worms and grubbers. What can be done for these worms? Is there any special fertilizer? Would you suggest land salt? The potatoes were all sprayed six times.—W. A. D., Lycoming County, Pa.

It may be safely assumed that the larger proportion of ammonia in the 4-8-4 applied on the fall-plowed field contributed largely to the increased yields of potatoes. The fall plowing may also have been a factor, since you note, your land is badly infested with wire worms. Fall plowing, followed by severe winter weather, will help to rid the land of at least some of the white grubs and wire worms present.

Chemical Treatment Costly

The general problem of ridding land of wire worms is a difficult one. The substances that have been used most successfully are carbon bisulphide and sodium cyanate. The amounts of these chemicals required are large enough to make the cost practically prohibitive except for the gardener or greenhouse man.

Sommon salt and kainit have also been used with some success. In the case of the common salt, the applications required are sufficiently large to lower the fertility of the land for a year or two. It is probable that plowing the land in the fall and applying 2000 to 3000 pounds of kainit per acre, working it into the surface soil, will help very materially in reducing damage by wire worms following season.

The kainit does not cost more than salt and has the tage of carrying twelve to fo per cent of potash. To that e there would be a saving in that would be no need to use any on the following crop.

Sawdust with Manu

I have two sawdust piles, on three years old, and the other one year old. I would like t know if the sawdust could b used as manure. Could it b piled in with horse manure fo a month or so? What crop would do best on it and on wha kind of soil should it be applie E. J., Washington County, Pa.

Considerable discretion shoul exercised in using sawdust for plication to the soil. Large qua ties of it will tend to injure the lowing crops, as indicated by light yellow color and growth. On heavier soils the age is ordinarily much less tha would be on the lighter types of

It has been found by exper that where sawdust is allowed to in the pile for some years the p uct is much safer to use than sawdust.

There is no objection to sawdust with manure. In order avoid injury to the crops, it w be best not to use more than one of fresh sawdust to ten tons of ure. The mixture, if thoroly w into the soil, should not be objec able under ordinary conditions.

The crops that will suffer from applications of sawdust be legumes like clover or cow soybeans or vetches.

State Forestry Progr

(Continued from page 3)

ownership, the sums which indi ual owners must pay.

The fact is that the state pay a tax to the counties in state forests are located. This is at the rate of two cents per for schools, two cents for roads, one cent for county purposes, ma a total of five cents per acre. In gation shows that this sum is to the tax paid for similar land private owners.

No one has the slightest inten of doing anything that would courage private ownership of lots. The truth is that the De ment of Forests and Waters away millions of trees for p planting every year. Besides, force of trained foresters is al at the disposal of the owners of vate timber land, ready to help any problem that may arise.

The record of the Pennsyl State Grange will prove that it never been in favor of needl piling up public debts. It is al easier to issue bonds than it is pay interest on them and to re them when due.

However, the proposed fore bond issue should not be viewed the light of an expense. It will an investment that will pay subs tial dividends of many kinds. Th is much more involved than the toration of timber production Pennsylvania. The questions water supply, flood control, pro tion to wild life, and the prevent of soil erosion all enter into it.

The proposal under considerat undoubtedly represents the fin business opportunity there is wit reach of the people of the state whole. As the Grange views it, t opportunity should be embraced a matter of self-interest and enlig ened public policy.

HENDERSON'S NEW OFFER

1925 Seed Catalogue and 6 Packets of Flower Seeds only 10c

What This Book Contains

208 pages packed with valuable garden information. Over 1,000 pictures showing actual results from Henderson's tested seeds. Describes hundreds of varieties of flowers and vegetables perfected by Peter Henderson & Co. through 78 years' experience.

Offers dozens of specially selected collections of flower seeds arranged especially for harmony of color and continuity of bloom. Tells you when to plant the different varieties of flowers and how—valuable cultural directions which guide you in making your garden more beautiful and more productive. Includes a calendar of planting dates for flowers. Gives proper remedies for insects and fungus.

Illustrates necessary garden implements, their uses, prices and complete description.

Get this Henderson Catalogue before you buy flower seed. Clip the coupon now!

MAIL coupon with only 10c and we will send you "Everything for the Garden", Henderson's new seed catalogue, together with Henderson's new flower seed offer—6 packets of tested flower seeds.

These six packets of flower seeds include Henderson's most famous specialties—Henderson's Invincible Asters, Brilliant Mixture Poppies, Giant Waved Spencer Sweet Peas, Single Giant Large Flowering Mixed Petunias, New Giant Large Flowering Mixed Zinnias, Large Early Flowering Mixed Cosmos—the loveliest and most prolific of their kind. These seeds, like all Henderson's seeds, are tested seeds.

Many of the accepted methods of testing seeds were originated by Peter Henderson over a generation ago. These methods, improved by years of experience, still safeguard the standard quality of Henderson's seeds.

Giving the plans for a new farmhouse the thoughtful consideration that will make it not just a house, but a real home. See page three.

Solving the Bad Weather Problem

FARMING is easier in winter months when your feet are comfortably protected against wet and cold.

It is Firestone's job to make winter farming easier with comfortable foot protection. Wise farmers know they can depend upon Firestone Rubber Footwear for dry feet, comfort and warmth.

Firestone Rubber Footwear affords more than ample protection in the worst weather. The quality and feel of the rubber, the smooth finish inside and out, the special reinforcements at points where most needed, are instant proofs (on sight) of the longer service and greater satisfaction of this footwear.

Firestone Rubber Footwear, notably the "Rancher" here illustrated, is a valuable contribution to better farming conditions and hundreds of thousands of farmers appreciate this fact. Demand Firestone when YOU buy rubber footwear.

We Are Building a House—Part I

The Most Important Part of the Work Already Is Finished—That Is the Planning

By HOWARD MITMAN

IT HAS come to pass that a house is needed on the farm—an additional house. Houses do not grow—not literally; they must be constructed. Yet it is true, in a way, that worthwhile houses, those destined to become homes and not mere shelters, are growths. They spring from a tiny seed called an idea; they are watered and tended, watched over and prayed for, until they stand ready to yield the wished-for harvest—a home.

Our house has made considerable progress. Not a spade of earth has been turned; not a stone has yet been quarried nor a tree felled; yet we are well along in that part of house building which is, perhaps, of first importance. We have almost completed our plans. When that has been accomplished three months or more before actual building operations can begin, it argues no mean diligence in a difficult undertaking.

Now, be well advised, there are several ways of building your house. You can buy, beg or borrow a set of plans embodying some one else's ideas; hire a mechanic or a score of mechanics, and set them a-going. In due course, if your bank account is able to stand the strain, you will be asked to accept the finished product. Tastes differ, and the house you get may fill the bill of your desires.

Making a House a Home

On the other hand, you can make your own plans; you can build into them all the things you like, (if your means equal the score of your desires), and you can omit all the undesirable things you find in the houses of your friends. It is the things we build into a house, the loving care and thought we give to the proper placing of every nail and sill and rafter, that lays a firm foundation for making a house a home.

At the outset would-be house builders are often dazed by the multiplicity of plans set before them by all sorts of agencies. There are periodicals devoted exclusively to the problems of the home builder; others combine house construction with related questions, such as decorating, furnishing, lawns and gardens; while many of the farm papers from time to time offer plans suitable for farm conditions. Helpful suggestions are given by firms producing materials and furnishings for the house. In fact everything from the last nail in the roof to the heating system in the cellar has been charted, cataloged and priced, and is yours for the asking—and a check. All these helps are of value if one knows how to make use of them.

It Should Raise the Building Standard

At the bottom of the matter, (or, perhaps, better, at the very top), lies the question of how much money can be made available for the purpose. If a house is really needed on the farm the money spent in building it is an investment; it creates a betterment; it will, or at least should, enhance the value of the property. Looked at from this angle one is often justified in spending more than a mere shelter calls for. It is well to bear in mind that a new house should be a distinct improvement on what went before. It should set the pace for the other buildings, making them look shabby, perhaps, in comparison, and thus prompting you to bring all up to the new standard. (All the better, if, from the buildings the infection spreads to your farming.)

A healthy tendency today is toward smaller houses, with fewer rooms. Houses must be kept in order by the housewife. The greater the space enclosed the more labor needed to manage it. It is a common experience for persons to regret after a few years that the house they built in their early enthusiasm is so large. "A little house well filled," is the thing to aim for. The size of the family and whether it is growing or has reached its growth—these are the considerations that should decide. If you are building the house for yourselves and not as a horrible example to the neighbors, the smallest structure conducive to health, comfort and convenience, is the best.

Really, when one sifts the thing right down to its essentials, only four rooms are needed in any house. We need a kitchen, for we are still in the habit of eating; we must have a bedroom, for sleep requires thoughtful consideration; a bath is no longer a luxury, since we have learned that washing is a means toward grace; (incidentally it may be remarked that a nice, warm, sunny bath room makes an excellent place for sprouting oats for the hens; we don't advise it; we simply mention it); and many hours at our disposal, when neither working, nor eating, nor bathing, nor sleeping, must be spent in the living room.

The kitchen, the bath, the living room, the bedroom—these four and no more—will be the house needed, be your family two or a dozen. Perhaps, as the family nears the dozen mark the bedroom may need to be added to; more units of the bedroom, let us say. Yet it is really surprising what jolly groups often come pouring forth from very tiny houses. In fact, it has almost become an axiom that the larger the house the smaller the family that rattles around in it.

Breakfast Nook Supplants the Dining Room

The dining room? Personally, we have always considered the dining room a rather wasteful contrivance. The newer builders now set off a space in the kitchen for meals and call it a "breakfast nook." Just why "breakfast," rather than supper or dinner or luncheon, or tea, is hard to say. But so it has come about. For a small family, say two to four, this is simple, convenient, and not costly. It can be made very attractive, with table and seats that fold out of the way when not "breakfasting." For feeding larger groups, when occasion calls, there is always the living room.

There Couldn't Be Too Many Closets

Absolute privacy is needed for bedroom and bath. These should be shut off, therefore, by sound-proof partitions and well-fitting doors; but for the remainder of the house, ease of communication and good lighting, heating and ventilation, are the prime factors.

A house of four rooms, therefore, will fill the requirements of a small family. But no; a very necessary thing has been omitted—closets. Let us print it large—CLOSETS. There must be closets, and ever more closets. In fact, perhaps the ideal house from the housewife's standpoint is made up of closets with rooms scattered in between, here and there. In spite of this, however, we stick to our four rooms, and will cause closets to grow in unsuspected nooks and corners. So that is settled.

Hall Was for Susie and John

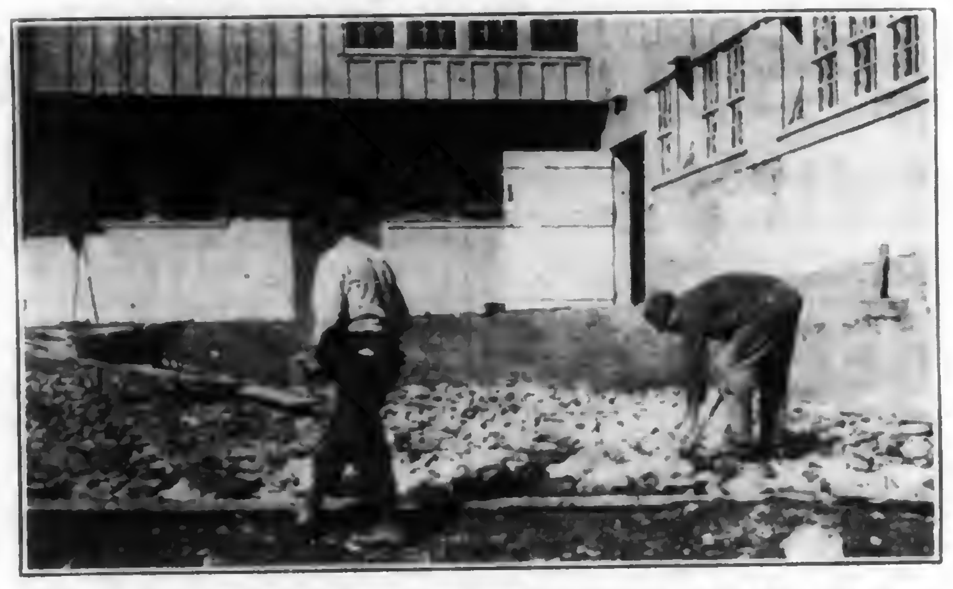
As remarked before, the dining room is one space-eating contrivance we hope to avoid in our new house. To us no meals taste so good or digest so easily as those served in the good, old farm kitchen. So, a "breakfast nook" it will be. Then there is the so-called hall or passage. Perhaps some one in the distant past found a real use for the kind of hall common in houses of many types, but if so, he has left us no accessible record of his discovery. So, hall we'll have none. Of course, we realize that Susie or Mary Jane may find halls with dim, uncertain light useful when their particular John or Jerry is making his get-away but we hope to provide suitable substitutes. A word comes over the shoulder at this point that halls are needed in some cases for taking off wet or muddy shoes and clothing; but why not a small, more or less enclosed stoop or porch for the purpose?

There's Lots of Room on the Ground

All that has gone before is to prepare you for the thought that our four rooms will be all on one floor—the so-called "ground floor." To us it has always seemed curious that farmers with acres of land lying around loose, should build into the air; yet they do, for we have seen farm houses of three stories and an attic or garret! And many a housewife will tell you that climbing stairs hour after hour is the most exhausting thing she does. We are planning, therefore, to have little up-stairs to attend to; and in addition to that we hope to eliminate much of the cellar stair tramping by installing a dumb-waiter—not the things one is often afflicted with in restaurants, dining cars and similar hostelries; but a contrivance of wood and steel and wheels and ropes which, at the housewife's bidding hauls things up and down cellarward

(To be continued)

No More Mud to Wade in This Barn Yard



The photograph shows a concrete pavement being laid in the barn yard of M. L. Jones, of Chester County, Pennsylvania. A six-inch layer of broken stones provides a well drained foundation for the concrete, which is about three inches thick.—N. S. G.

"75 Per Cent of Pennsylvania Soils are in need of Lime"

The above authoritative statement was made by Prof. J. W. White, in his "radio address" broadcasted February 11th, 1924, from Pennsylvania State College.

Prof. White further stated that 75 per cent of ALL eastern soils are in need of lime.

Charles Warner Company is prepared to supply lime in all commercial forms FOR AGRICULTURAL PURPOSES

SEED CORN

Germination 98%

Superior for ensilage. Large, thick, heavily leafed stocks. Produces more ensilage per acre on our farms in Northwestern Pennsylvania than any other variety we have ever tried.

The quality of our seed corn is exceptionally fine, due to our care in raising same. In the latter summer months the leaves are stripped off the stocks, and as the corn further matures, the tasseled tops are also cut off, leaving the ear exposed to the sun. Only the best ears are chosen for our seed and all butts and tips removed. Therefore, even in a bad season our germination test is very much higher than ordinarily raised seed corn.

$4 per bu., delivered at your station.

Write for prices on lots of 10 bus. or over.

OUR FARM

Where an Editor Works and Thinks

I HAVE a letter from an ambitious young man to which I have given a good bit of thought the last few days. He seems to be standing just at the forks of the road and is uncertain which he should take to bring him to that enchanting place, Success. He has had a fairly good education and has been brought up on a good farm by a good farmer father. He likes the farm and farm life but like all ambitious boys he wants to "succeed" in life and he has heard so much discouraging talk among farmers and by the so-called farm leaders that, to use his own words, he feels shaky about it. He is "thinking of getting married" and wants to have independence and a home of his own, eventually. He winds up his letter thus:

"Shall I go to town and start in some line of business with a big firm, or would I stand a better chance of success by buying a part of father's farm and building up a farm business of my own?"—James.

James, you have imposed upon me a difficult task. I do not know you personally. Neither do I know that girl you evidently think the world of, and that is a big factor in reaching the goal of success you covet, no difference which road you take. I am not sure just what you mean by success, altho your letter suggests that you have more than the average understanding of life and its purpose. You differ from a great many other farm boys who have the city in mind, in that you are hesitating at the forks of the road, while most of them hurry away on the road to the city without glancing at the other way. They have been doing that for generations. Some of them succeed, but most of them do not. All of them, sooner or later, look longingly back, in memory, to that hastily made decision they made at the forks of the road. To most of them the shining light which hung in the distance on the road to the city has proven to be a will-o'-the-wisp.

The thing in your letter that strikes me favorably and makes it seem worth while to try to answer you is the mention you make of wanting eventually a home and independence. You show good judgment in thus looking ahead instead of making your chief objective th getting of money to spend for immediate good times.

Let us look at the facts as the are exemplified in modern busines conditions and tendencies. Nearl all the big business of the times conducted by large firms or combinations of firms. Business method have been systematized and scheduled so that individuals working i them are but so many units of a system. To use a well-worn term, a individual is merely a cog in the machine. The human factor in the equation has long since been eliminated. A machine is kept and regarded only as long as it can function efficiently. When it is worn out it is thrown on the scrap heap, and replaced by a new or better part. The trend of business organization has been in this direction for a long time. The old days in which a man could learn a business or a trade and then start for himself are gone. You do well to ponder, "What is a the end of the road?"

Farming is about the only important productive business left which a man may engage on his ow hook, and make a living, build up a home and have a measure of independence. There is a national a well as an individual importance i this phase of the subject. If too large a proportion of our people place themselves under the control and direction of others the time may come when democracy in government will be but a name, since individuals will have lost the ability to thin and act for themselves. A successfu farmer must always be able to d both these things.

So, James, if you have the capa city to work and wait, to think an act for yourself, if you desire futur security and peace of mind m than flash and passing pleasure, you realize that the real success f which you long consists in exercisi your own self-directed powers wards making yourself, your ho and your community things whi contribute most to the common w fare, think seriously and honest before you desert the business whi has made your father and moth the happy, upstanding people th are.—R. P. K.

I'm but a cog in life's vast wheel
That daily makes the same
trip:
Yet what a joy it is to feel
That but for me the wheel mi
slip!
'Tis something, after all to jog
Along and be a first-class cog.

THE CHEERFUL PLOWMAN

Granddad's Advice

WHEN but a lad of sixteen to —mind filled with fishing an swimming holes—I helped grand father build a fence between h land and Neighbor Spence. By acc dent I set one post two inches ou or three at most. "Yer out of line! my granddad cried a [illegible] at squinty-eyed. "I see," [illegible] I. trifle out, but not enough to ca about!" "Two inches out is two too much! And then, 'tain't [illegible] that such, but lookit here, where will you land?"

He drew a figure on his hand with a burnt match and show[illegible] me h two inches out, right here and now, would lead me fifty feet astray i building fence for just one day! "If you slant back," he added, "se you're off of Spence and in on me! Pull up that post; bee-line the fenc That's best for both myself and Spence!"

Granddad was right. He sowed a seed that sprouted in [illegible] mor creed. I deal with men as he built fence. A bee-line plan is common sens I aim to fence in rigid line between men's normal rights and mine. Shoul I get "out" beyond my share, I move the post right then and there; th smallest trifle out of plumb would slant in big in years to come. I don slant back, for don't you see the fence would then cut in on the' N "Pull the post, bee-line the fence! That's best for both myself and Spence!" —J. Edw. Tufft.

Select the Right Analysis for Your Crop

hrough years of research and tual field experiments, the state ricultural colleges and experient stations have determined e analyses of fertilizers which ill give you the best results on ch crop and soil.

For Pennsylvania, the Pennylvania Agricultural Experient Station recommends the llowing analyses:

rn—No manure or clover sod, or soil, 2-12-4, 3-10-6; medium il, 0-12-6; rich soil, 0-16-0; with nure or clover sod, poor soil 12-4, 0-16-0; medium or rich ils, 0-16-0.

heat, rye and oats—No mare or clover sod, poor soil, 12-4; medium soil, 2-12-4, 0-0; rich soil, 0-16-0; with mare or clover sod, all soils, 0-16-0.

lfalfa when seeded—No mare or clover sod, medium soil, 12-4; rich soil, 0-16-0; with nure or clover sod, poor soil, 12-4, 0-16-0; medium or rich ils, 0-16-0.

lfalfa, top dressing—No mare or clover sod, medium soil, 12-6, rich soil, 0-12-6, 0-16-0; th manure or clover sod, poor medium soils, 0-12-6, 0-16-0; h soil, 0-16-0.

mothy—No manure or clover d, poor soil, 7-6-5, 6-8-4; medi soil, 7-6-5, 10-5-0; with mare or clover sod, poor soil, 16-0.

tatoes—No manure or clover d, poor soil, 3-10-6; medium il, 2-12-4, 3-10-6; rich soil, 2-4; with manure or clover d, poor soil, 3-10-6, 2-12-4; dium soil, 2-12-4; rich soil, 16-0.

getables, (Leaf crops.)—No nure or clover sod, medium or h soils, 6-8-4, 4-8-4. With nure or clover sod, medium il, 4-12-4, 4-12-0; rich soil, 12-4, 4-12-0, 0-16-0.

matoes, peppers, cucumbers, lons, egg plants—No manure clover sod, all soils, 6-8-4, 4-8-4; th manure or clover sod, poor medium soils, 4-12-4; rich soil, 12-4, 4-12-0, 0-16-0.

getables, (Root crops.)—No nure or clover sod, poor il, 5-10-5, 4-8-6. Medium soil, 6, 4-12-4; rich soil, 4-12-4. th manure or clover sod, poor il, 5-10-5, 4-12-4; medium soil, 12-4, 2-12-4; rich soil, 3-8-3, 16-0.

bacco—With or without clor sod, medium and rich soils, 8-5, 4-8-4.

an Authorized Swift Agent the sale of Swift's Red Steer rtilizers, we are co-operating th the Pennsylvania Agricultal Experiment Station in commending and selling these alyses.

Come in and we will help you lect the analysis and decide on e amount per acre to make you e most profit.

asa
Authorized Swift Agent

Even with their virgin soil, the Indians proved the value of fertilizer—they placed a fish in each hill of corn

From the A. S. A. in your community you can secure information as to the most effective use of fertilizers. He keeps in close touch with the State Agricultural College, County Agents, and Swift & Company

For bigger profits use Swift *service*

By putting a fish in each hill of corn, the Indian followed the best known fertilizer practice of his day. The fish helped the crop—that was all he knew.

Since those days, science has made many important agricultural discoveries and has developed many different sources of plantfood.

Now, by taking advantage of Swift Service through the A. S. A. (Authorized Swift Agent), every farmer may know the best combinations of plantfood for various crops and soils.

Know what this service means

In your community there is a man or firm who displays the A. S. A. sign. He was selected as the A. S. A. because he has a reputation for square dealing; because he keeps posted on the profitable farming methods of his community and stands ready to give worth-while service.

He is an important factor in your community. Through close co-operation with the State Agricultural College, the County Agent, and Swift & Company, he constantly keeps himself posted regarding profitable farming methods.

You can profit by a visit to the Authorized Swift Agent.

Why Red Steer gives best results

Swift & Company, through constant research by their expert chemists and agriculturists, have not only determined the most productive sources of plantfoods but the proper way to combine, mix, and process them to obtain maximum results on all crops.

Swift's Red Steer Fertilizers are so thoroughly processed and combined that each plant is sure to get a balanced ration—just the food it needs and at the right time. That means maximum yields of highest quality crops.

Back of every bag of Red Steer Fertilizer is the Swift reputation—a reputation, maintained for over fifty years, of making each product the best of its kind.

Look for the Red Steer on the bag. It is your guarantee of highest possible quality.

Ask the A. S. A. about it

The A. S. A. in your community can explain fully how Swift's Red Steer Fertilizers will fit into your plans for maximum profits on all crops.

Look for the sign that marks his place of business —the sign of Service and Quality. If by any chance you cannot locate him, write us and we will put you in touch with him.

Boycott Charged

BY A resolution adopted in the Senate recently the Federal Trade Commission is directed to probe immediately the methods employed by the American Tobacco Company and the Imperial Tobacco Company of Great Britain in the purchase of tobacco. It is charged that an agreement exists between the British company and the American company for the purpose of injuring by boycott the great co-operative tobacco selling organizations. It is said that these tobacco companies are opposed to the formation of co-operative marketing associations and desire to destroy them.

It is hoped that, if any such situation really exists, prompt and decisive action on the part of the Federal Trade Commission will be such as to discourage destructive attacks upon farmers' co-operative efforts. There is a possibility in certain lines of production, especially where the manufacture of the products is a virtual monopoly, of using the boycott and other unfair trade practices, thus making all co-operative work non-effective.

The New Secretary of Agriculture

WILLIAM M. JARDINE, who will be made secretary of agriculture in President Coolidge's Cabinet on March 4, is a bred-in-the-bone westerner from the great open spaces. Born on a cattle ranch in Idaho he played football and studied four years at the Utah Agricultural College for his degree and later went back there to teach. He managed a dry farming company in Utah, was assistant cerealist of the United States Department of Agriculture supervising dry land cereal investigations, and after engaging in several other activities became connected with the Kansas State Agricultural College. He was made president of that institution in 1918 and leaves that position to fill the cabinet vacancy caused by Secretary Gore's forthcoming inauguration as governor of West Virginia.

That the new secretary will bring into the United States Department of Agriculture ideas on farm problems that are entirely different from those held by the late Secretary Wallace is evidenced by his attitude toward the McNary-Haugen plan. Doctor Jardine is reputed to be strongly opposed to this or any other plan which savors of price fixing, while Mr. Wallace was a stronger supporter of the McNary-Haughen bill.

We find no evidence that Doctor Jardine knows much about farming here in the East, where we don't have to wait two or three years for enough water to accumulate in the soil to grow one crop. However, he is said to believe that farmers can solve their problems without very much aid from conferences, commissions and boards founded on the help-the-poor-farmer idea, which is a big point in his favor.

The Giant Power Report

GOVERNOR PINCHOT presented to the Legislature last week the report of the Giant Power Commission which has been at work studying the subject for the last two years. The scope of the work done and the outline of possibilities presented are a revelation to the average layman, and they do credit to those who have had the work in charge. The project is a bold conception and foretells as great a revolution in civil and industrial life as was worked by the advent of steam a century ago. As the report points out, the adaptation of the steam engine to industry tended to congregate manufacturing into big centers, while the ease with which electricity can be distributed will tend to decentralize industry and population by developing more and smaller units. Its availability for rural uses will work equally as great changes on farms and in villages.

The general plan is to pool the power made by the various companies and distribute it thruout the territory at rates regulated by a power commission. It proposes that power producing plants shall be erected in the coal producing sections, and the resulting current transported wherever wanted by high-power transmission lines. This will do away with the necessity for hauling so much coal as is now done at great expense. During the past few years the development of manufacturing in Pennsylvania has been retarded because of the availability of cheaper power in other states having hydro-electric plants. The production of electricity at the mines will not only give this state an equal chance with others, but will also increase the demand for coal eventually.

But it is because of the possibilities which the development of such a system would open for the people on the farms and in rural sections generally that we feel the greatest interest. It is in those places that modern improvements have been slow to relieve the drudgery and monotony of life. The lack of available power has continued to force rural residents to perform many back-breaking tasks which city people have for years loaded upon the willing servant, electricity. Of course, it will take time to achieve the reality of the vision made clear. There are many obstacles to overcome, but it is a comfort to know that the generations to come may live better and more comfortable lives.

Increased Dairy Products

THE figures just published by the Department of Commerce show that the production of butter, cheese and condensed milk products increased thirty-four per cent in value between 1921 and 1923. A still greater increase is seen in quantity in every product except butter and cheese. The increase in dairy products is traceable to the switch from grain, cattle and hogs in the Middle West because of the slump in price in and after 1920. Necessity as well as governmental advice suggested this change, but it should be noted that the extension of the dairy industry has gone about as far as it should at present. While there has been a noticeable increase in the per capita consumption of milk and its products, prices and the demand do not warrant any further expansion of the business.

Are Farmers Getting Careless?

A CERTAIN business man who takes an interest in farming said the other day after an extended trip thru the state:

"It seems to me farmers are losing heart in their business, or else they are getting mighty careless about appearances. I noticed that most farms had a dilapidated look. Buildings needed painting, fences were rotting down; in fact, many places were in a run-down condition."

The conditions which this man regretted to see were not due to the causes he mentioned. He would know, if he stopped to think, that farmers have necessarily been mighty busy during the last few years in producing more than was ever produced, with less help to do it. There was no time for doing any work but that of production. We have not the figures for all the states, but those of New York are probably typical. In that state there were 26,700 hired men on the farms on February 1, while in 1916 there were 77,000. In addition, there were 165,000 fewer farm people living on farms.

However, it is poor policy to continue neglecting repairs and improvements. In general, this neglect has gone as long as it is possible to go without causing serious loss. The failure to keep buildings painted, roofs and fences repaired, and additions to equipment made, soon produces a condition which may mean financial failure. That situation almost has been reached on many farms, and it would pay better to let food production lag for a time than to neglect longer the needed improvements.

Washington Letter

FARM SPOKESMEN DISAGREE.—Hearings on the President's agricultural conference recommendations before the House and Senate Committees on Agriculture have brought out that spokesmen for the farmers' organizations are apparently hopelessly divided in sentiment. The California co-operatives want legislation along lines recommended by the conference. The executive committee of the National Grange approves the main features of the conference report. Representatives of the National Board of Farm Organizations favor the Dickinson bill which would create a Federal Co-operative Marketing Board in connection with the Department of Agriculture and the commodity co-operatives represented by Aaron Sapiro oppose any co-operative marketing legislation, and some of the farm organization leaders oppose that part of the conference plan which provides for a marketing board whose members are to be appointed by the President.

MARKETING BILL REVISED.—The Williams-Capper bill was revised five or six times before the committees concluded their hearings, and the last edition is known as the Haughen-Capper bill. It eliminates the Secretary of Commerce from the Federal Marketing Board.

In making application for registration the co-operative must show that its financial standing and business methods are sound. It must use all standards for agricultural products established under the United States warehouse act. All disputes must be submitted to the federal board for arbitration. It must permit the examination of its accounts and submit to the board not oftener than twice a year a sworn statement of its financial condition.

SATISFIED WITH JARDINE.—Most of the farm organization representatives in Washington express satisfaction with the appointment of Dr. William M. Jardine, President of the Kansas State Agricultural College, to be Secretary of Agriculture. The names of 180 men were presented to the President as qualified for the post, but the contest had narrowed down to two, John Fields, of Oklahoma, and Dr. Jardine. When the Kansas delegation in Congress united their efforts upon Dr. Jardine his appointment was assured.—E. E. Reynolds.

Harrisburg Letter

GIANT POWER'S RURAL SIDE.—While Governor Pinchot's presentation of the proposition for state control of electricity so everyone may be assured of the maximum production of energy from the state's remaining natural resources has won legislative commendation, there is considerable disposition to call for further study of the problem. One of the criticisms made of the report is the rather indefinite way remote regions are to be given power. Creation of rural electric districts to function much as do school districts for supply of power and the incorporation of farmers' mutual electric companies are well laid out but how pole lines are to be financed without heavy rates being charged for the farmer towards the end of the line is a question raised here. Experience with telephone, electric light and telegraph lines, knowledge of high cost of material, equipment and labor and maintenance of service have all been figuring in the discussion of the rural side.

ALCOHOL IN AGRICULTURE.—Some comment upon the fact that the proposed state board for control of alcohol by issuance of permits for manufacture, handling, transportation and use of the spirits is to be located in the Department of Agriculture has been heard among the rural legislators. The new act is designed primarily to put the bootlegger out of business and possibly the secretary of agriculture was put into the board because of the extensive manufacture of fruit juices in Pennsylvania.

BUDGET MARKS TIME.—The prominence of power and prohibition have caused the work of the appropriations committees to be overlooked, but there are signs the bills are not going to be as much different from budgetry recommendations as was predicted a week ago.

FARM PERMITS.—One of the numerous bills presented for changes in the educational system establishes a system of permits for children to remain out of school because of farm or domestic work just the same as working in a factory.

DEER FENCE BILL MOVES.—The H[illegible]es bill, providing for the Game Commission to pay half the cost of deer proof fence and making some changes in the methods of securing such protection for farmers, has been approved by the committee.

AFTER DOGS AND WEEDS.—Activities of the Department of Agriculture are being tuned up so there will be a movement against thousands of owners of dogs refusing to take out licenses. As the dog fund is to provide much of the money for tuberculous cattle the drive will be started soon. The weed drive is due to presence of seeds of nuisance character in seed mixtures.

TO ACCREDIT HATCHERIES.—The Department of Agriculture is about ready to get started on its proposed system of having hatcheries of poultry, especially day-old chicks, placed on an accredited basis. Close inspection of plant, examination of birds and tests with certificates for establishments meeting requirements are the main features.—Hamilton, Harrisburg.

New Jersey Letter

LEGISLATIVE NOTES.—New Jersey farmers may expect action on a number of farm measures now pending in the state Legislature by early March. Several of the bills authorized by the legislative conference of all New Jersey farm groups last fall have been advanced in the Legislature and progress on other measures is being stimulated during late February by the Legislative Committee of the State Farm Bureau, which has the matter in charge.

SHORT COURSES AT COLLEGE.—The New Jersey State College of Agriculture reports considerable interest in its short courses this year, which are of a week's duration each and cover the practical phases of important farm work. The courses scheduled at the College for the period of February 23-28 are on poultry feeding, milk testing, dairy and livestock feeding, and flower gardening; the week of March 2-7 will be devoted to practical management.

MANY VEGETABLES CANNED.—The pack of various vegetables and fruits in New Jersey was heavy this year, according to figures just gathered by the State Department of Agriculture. Over 264,000 cases of lima beans were packed this last year which is approximately half of the pack of lima beans in the entire United States. The pack of canned peas was nearly double that of last year, owing to larger yields and increased acreage, while the small tomato crop reduced considerably the usual volume of this crop handled by the can houses. The acreage for beets for canning purposes jumped nearly five times last year's, the pack increasing accordingly. Pears, cherries and rhubarb were canned to a greater extent than in the previous season while the strawberry pack was not as large as usual.

NEW JERSEY POTATO SURVEY.—The Farm Bureau has conducted a survey of acreage to be planted by growers in states producing potatoes which are competing with the New Jersey crop,—North Carolina, Virginia, Maryland, and other states. The results will be published as early as possible, with the view to informing the growers previous to the time of planting of New Jersey's crop.—B.

New York Letter

DAIRY PURCHASE.—The Dairymen's League has purchased eight more county shipping stations for handling Class 1 milk. The League is controlling over fifty per cent of the milk sold in New York City.

DAIRYMEN NOT WITHDRAWING.—The annual withdrawal period for pooling members of the Dairymen's League is now on. Opposition forces are very active. Yet the new policies of the organization and its consequent reductions in expenses seem to give it the key position, and few withdrawals are coming in, and new members are seeking admission into the organization. The League paid a gross price of $2.50 per cwt. for January milk with no deductions for certificates of indebtedness.

MOVE TO NAME FAIR MANAGER.—As an outgrowth of the recent investigation of the State Fair Commission there is a move to abolish the commission and to select a manager of the state fair who shall have no connection with the commission or its employes, and who shall give his entire time and attention to developing the fair industrially and agriculturally. The state now sees, too, for the first time in history, its governor and lieutenant-governor lined up against each other with bitter antagonism as to party measures, each with a considerable following.

SCHOOL LEGISLATION. —The farmers' choice for a regent was disregarded when two city men were last week elected to fill the two vacancies. Some form of increased state aid for rural schools seems likely to receive approval at the Capitol.—M. G. F.

WOLVERINE
The 1000 Mile Shoe

Walker Brothers
General Merchandise

Rt. 4, Ripley, Miss., 3-19-'24
Wolverine Hide & Tanning Corp.
Rockford, Mich.

Gentlemen:

We would like to have your catalogue of your Wolverine 1,000 mile Plow Shoes. We have been wearing your Wolverine Work Shoes for three winters and those shoes are good yet. I have had soles put on them but the uppers are still good. The leather is as soft as a glove.

Yours truly,
Walker Brothers

The "All-Work" Shoe cut a little higher especially to keep out plow dirt

Try this
Horsehide Shoe
1000 Miles Wear
always dries out soft
It's our secret tanning process

Men are amazed by the wear they get from Wolverine Cordovan horsehide shoes. We receive thousands of letters like the one above. There's a real reason for this remarkable wear. It's the tannage. Cordovan Horsehide is by far the toughest wearing leather known to man. Big league baseballs are covered with horsehide. For no other leather has been found to stand the terrific pounding. Cossack saddles are made of it. And the finest Army Officers' boots are made from the thin "shell" layer of horsehide.

But never before could horsehide be satisfactorily used in work shoes. For it always tanned up too stiff. After years of experiment, however, we found a way to make this tough leather soft as oiled rawhide. It's a secret process developed in our own tanneries. It not only makes the leather soft. It *keeps* it soft. Even after many wettings Wolverine Cordovan horsehide shoes dry out soft as velvet.

You'll never know how good these shoes are till you try them. Take the thick pliable leather between your fingers. Soft as velvet. Tough as rawhide. Easy on the tenderest foot. Their long wearing qualities will surprise you, no matter how hard you may be on shoes.

Wolverine Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

We are work shoe specialists. We make no other shoes. We select the choicest hides, and we tan them ourselves. That's why you'll find Wolverines different from any other work shoes.

For farm, shop, lumber camp, oil field or mines and for every season there is a Wolverine shoe exactly suited to your needs. Try it. You'll say there never was such a shoe for wear. And for comfort, too!

If your shoe dealer cannot supply you, please write us. We'll send you a catalog and the name of the nearest Wolverine dealer.

Replace Plant Food

Removed by Last Year's Crop

With every crop harvested your soil contains less plant food.

The use of manure and crop rotation replace only a part of the elements removed by crops.

Can you expect your soil to produce a paying yield of sound, plump grain when you are not putting back what is needed?

V-C Fertilizers contain those elements of plant food that Corn, Oats and Potatoes require. Make a full crop this year by using V-C Fertilizers on every acre you plant.

V-C Fertilizers represent the best that the science of chemistry and agricultural practice know about the subject of plant food.

Ask your local dealer for V-C Fertilizers or write

Agricultural Service Bureau
VIRGINIA-CAROLINA CHEMICAL CO.
HOME OFFICE: RICHMOND, VA.

Write Our Agricultural Service Bureau about your problems of soils, fertilizers and crops. This service is free.

Ask for our booklets on crops.

Increase Your Profits

—by More Potatoes Per Acre

WE as potato growers cannot hope to get bigger profits from our potatoes by a higher price. It is up to us to get our profit from a bigger yield per acre.

The Erway Strain of Rural Russets and Potter County White Rurals are certified Seed Potatoes of sturdy stock and Disease Free—grown especially for seeding purposes in a high altitude where the weather is especially favorable—under the direction of the Farm Bureau and certified by the Penna. State College and Penna. Dept. of Agri. The seed is scientifically stored over the winter in our 80,000 bu. frost proof store house where experts are in daily attendance. Write us for more information about Potter County Certified Disease Free Seed Potatoes.

POTTER CO-OPERATIVE POTATO ASSN.
COUDERSPORT, PA.

MAIL COUPON TODAY

Potter Co-Operative Potato Assn.
Coudersport, Pa.

Please send me more information about Potter County Certified Disease Free Seed Potatoes. I will plan ______ acres in 1925 and will use about ______ bu. of seed potatoes. No obligations on my part.

Two Notions about Asparagus Roots—Weed Control

THREE-FOURTHS mile of roots on one plant! And only one of the two kinds of roots on an asparagus plant was measured by the California men who took the trouble to apply a tape line to all the small roots of a plant. Perhaps they had the usual California habit of making figures look big, but there was the tape line to show that the roots were just that long. In addition to the thick, fleshy storage roots which were thus measured, asparagus has another kind, the short, krinkly white roots that do the work of the plant.

The storage roots seem to live for several years at least, while the feeding roots probably do not live over one year. If any one could add up the lengths of all the feeding roots of a five-year-old asparagus plant he might find another three-fourths mile of roots. A big system of roots, the asparagus plant has.

Two Ways to Look at It

This is not merely a curious thing, however. The man who is cautious as to feeding his crops will say to himself, "Since my asparagus has roots so long as that, I can save money on manure and fertilizer, because all those roots surely can hunt thru a lot of soil for nourishment. The money I would have used to buy manure and fertilizer I can use for a new car."

Another man,—perhaps a dairyman who grows asparagus on the side and knows the difference that sometimes exists between two cows with different capacities for taking in food and giving milk made out of that food,—will have another notion. He will think that all those roots simply stand for so much absorbing power and storage capacity, and that they form the mechanism by which he can turn dollars spent for manure and fertilizer into dollars received from commission man or market patrons.

Of the two men, who is more likely to find his car free from a mortgage at the end of 1925?

Turning the Corn in the Hill

Those big roots of the asparagus plant mean other things than a high feeding power for plant foods. They stand for high water absorbing power and possibly some storage space for water in summer time. At any rate, asparagus will make a good growth on land that gets pretty dry in droughts. It seems too, that the decay of the older storage roots, and probably the short feeding roots as well, furnishes a large amount of organic matter which helps keep the soil loose.

Folks who have studied the matter say that vegetable crops that send their roots close to the surface, within say three inches of the surface, are the ones most often injured by cultivation. That seems plain enough, but when these folks go on to say that such crops sometimes do better without any cultivation at all, when weeds are not bad, then we have to sit up and take notice.

The man who thought he had to work his corn rows so closely that the plants were turned around in the hill, is not much worse off than most of us as to understanding where roots are and what happens when we cut them off.

Weeds in the Cabbage Patch

It seems to me that we often work cabbage too hard, when weeds are not bad. The old rule that cultivation is needed at least once a week regardless of rains and weeds will bear watching. Cabbage sends some of its roots close to the surface between the rows, and they are easily torn off by deep cultivation. Then, too, it is not always possible to work the cabbage field only on a warm afternoon when the leaves are somewhat limp. When the leaves are crisp, they are easily broken, or they catch in the cultivator and twist the plant around on its stem. If that happens a few times the maturity of the plant is sure to be delayed.

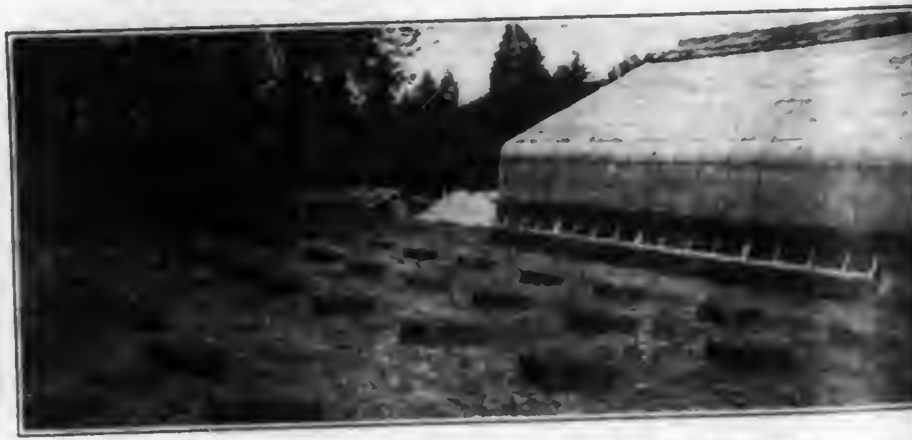
Worse in the Late Crop

Probably as far as weed control is concerned we could adopt a different plan for late cabbage than for early. The early crop is off before some of the worst weeds are above half size and then there is a chance to plow the ground or kill all weeds by some other means.

The late cabbage crop grows during a weedier time of year, and the weeds that are left in the field are likely to make seed, because the land is not plowed as a rule until the following year. This all means that weed control with late cabbage is a more important matter than with early cabbage.

Putting a layer of sand on top of the soil in which early vegetable seed has been planted is no guarantee against damping off, altho if the sand itself is clean and free from disease this practice helps to ward off disease. Even sterilized sand cannot prevent disease of seedling stems if ventilation is not looked after carefully. If the sand can be confined to the rows in which the seed is planted, and not spread over the entire surface of the soil, less of it will be needed and that little can be boiled or baked to kill all germs of disease.—W. C. P.

Protection for Melons and Cucumbers



Frames for covering hills of melons or cucumbers. They may have glass tops to promote early crops, or screen tops to keep out beetles.

Cabbage Has Yellows

Can you tell me what to do to eliminate the trouble I have been having with my cabbage? The roots get yellow and the leaves fall off and die.—J. W., Juniata County, Pa.

Your cabbage probably has had the yellows disease, for which there is no known cure. This disease lives in the soil, and sooner or later it spreads to most of the land in every cabbage growing neighborhood. In the West, particularly in Wisconsin, this disease has become so severe that new varieties have had to be bred to resist the disease. The new ones are resistant, but they are not so good for market as the common kinds of winter cabbage. The only thing you can do, if you cannot change your ground every year, is to buy from a seedsman some seed of the resistant kind.—W. C. P.

To Keep Savoy Cabbage

A SATISFACTORY way to keep Savoy cabbage in this latitude is to lay two rows together on the top of the soil, heads touching and roots outward, and plow soil over the roots. When winter is at hand a light covering of hay or straw over the heads is sufficient. Heavy covering makes this cabbage decay badly in storage. Then, too, if all the light is kept out the heads become blanched, and do not sell as well as the greener heads.

We have been using Savoy cabbage from a cold frame. A straw mat was placed over the heads, which had their roots underground, and the sash put over the mats. More thoro ventilation than we provided would have been helpful in securing better keeping. Cold frame storage is somewhat troublesome because of the rapid rise in temperature on warm winter days. The sashes have to be raised frequently.—W. C. P.

Plant Lice on Trees

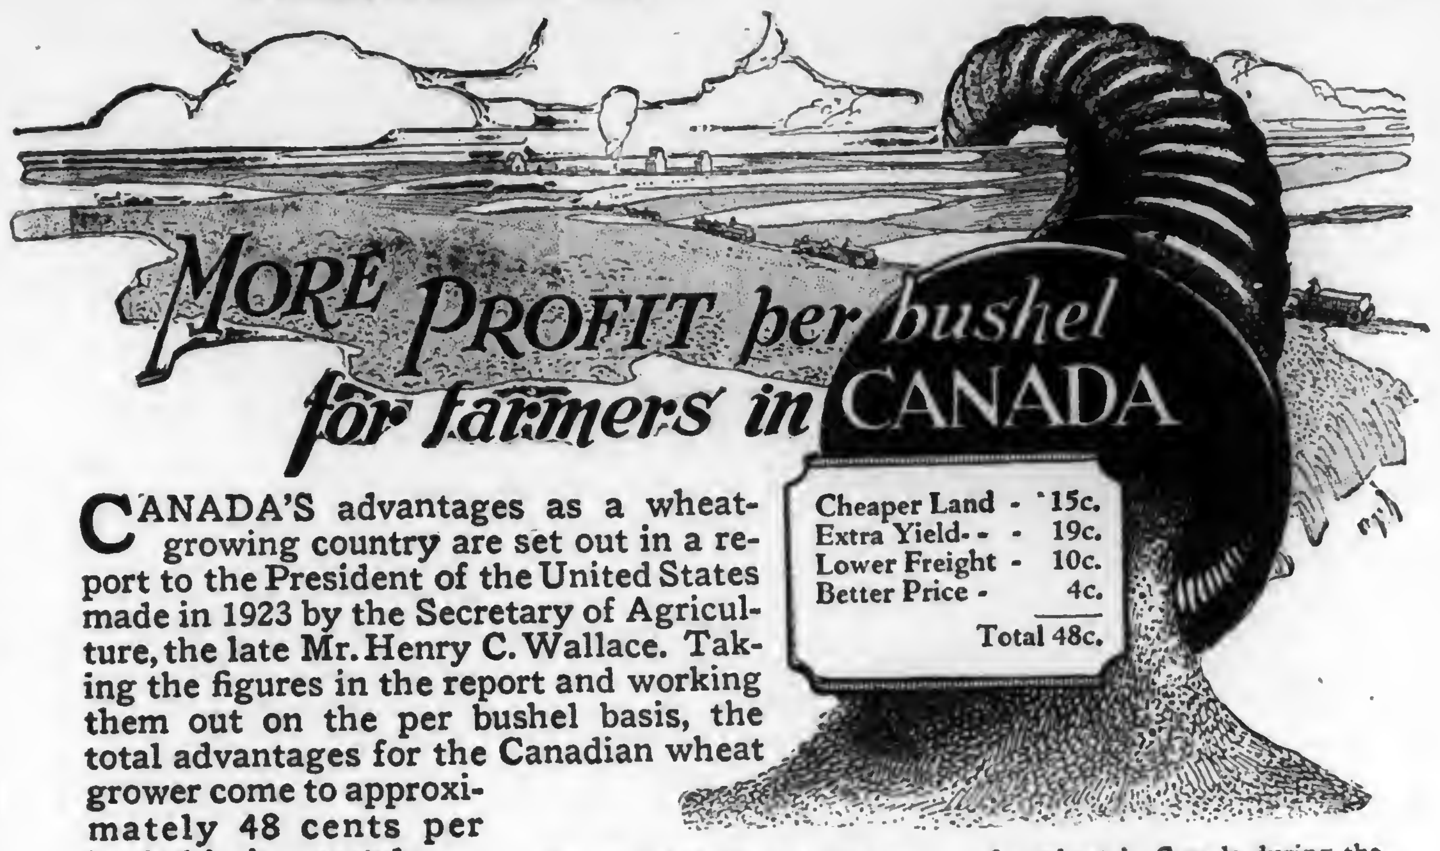
ATTENTION of fruit growers is called to the presence of a large number of aphid, or plant lice, eggs now found on the apple trees by T. L. Guyton, State Bureau of Plant Industry. In the eastern part of Pennsylvania the eggs are very thick. Just which species of plant louse this may be no one can determine since the eggs of all of the species which frequent the apple tree are exactly alike. Growers should make observations thruout their orchards and determine the number of eggs present. These eggs are small black bodies about half the size of a pinhead. They are found on the smaller limbs of the apple tree and usually are most abundant on the lower side of such limbs.

Weather May Prevent Damage

Control measures consist in applying the delayed dormant spray with the addition of nicotine to this spray where lime sulphur is used. Some workers report a successful kill of the plant lice by using a miscible oil in the delayed dormant spray. If the infestation is found to be heavy after the delayed dormant spray, nicotine should also be added to the pink spray. The harm which may result from the infestation, too, will be controlled by the weather conditions next spring. It sometimes happens that with adverse weather conditions very few of the aphids will survive to do harm to the apple crop.

"Do I bore you?" asked the mosquito politely, as he sank a deep shaft into a man's leg.

"Not at all," replied the man, smashing him with a book. "By the way, how do I strike you?"



MORE PROFIT per bushel for farmers in CANADA

Cheaper Land - 15c.
Extra Yield - - 19c.
Lower Freight - 10c.
Better Price - 4c.
Total 48c.

CANADA'S advantages as a wheat-growing country are set out in a report to the President of the United States made in 1923 by the Secretary of Agriculture, the late Mr. Henry C. Wallace. Taking the figures in the report and working them out on the per bushel basis, the total advantages for the Canadian wheat grower come to approximately 48 cents per bushel in increased profit. These advantages are as follows:—

First CHEAPER LAND

The report (page 26) averages the value of farm lands for Canada as a whole in 1922 at $40 per acre, and in the prairie provinces at from $24 to $32. These prices are for improved farms; prairie lands in Western Canada close to railways can be bought at $15 to $20 an acre. But take $24 an acre as the basis for Canada's wheat lands. In eleven of the Western Wheat States, land values range from $46 to $110. Take $46 for sake of more than fair comparison. The interest charge at 7% would be $1.68 per acre in Canada as against $3.22 in the Western States. When divided out on the basis of produced bushels per acre, the interest charge is 25.8 cents per bushel against 10.8 cents, which figures out to **an advantage of 15 cents a bushel for Canada, on the basis of *cheaper land.***

Second EXTRA YIELD

Again (page 26) the report gives the average yield of wheat on the Canadian prairies during 1913-22 at 15 to 16 bushels per acre, and in the American North West at 10.6 to 14.3. This increased yield, due to richer land, reduces the cost per bushel from approximately 98 cents in the U. S. A. to 79 cents in Canada (1923 estimate), **a clear saving of 19 cents a bushel.**

Third LOWER FREIGHT RATES

On page 21 of the report is printed a table showing comparative freight rates between points of like distance in Western United States and Western Canada. For example, the rate for carrying a bushel of wheat from Teton, Montana, to Duluth, a distance of 1,004 miles, is 25.2 cents per bushel, while from Conquest, Saskatchewan, in the centre of the Canadian prairies, to Port Arthur at the head of the Great Lakes, a distance of 1,002 miles, it comes to 15 cents per bushel, **a difference in rates of 10.2 cents in favor of Canada.**

Fourth BETTER PRICE

On page 27 of the report to President Coolidge the superior quality of the hard Canadian wheat is attested by the fact that American millers import it for mixing purposes and pay the duty, while it sells at a premium in Liverpool. Prices for wheat in Canada during the farmers' marketing season, 1924, were steadily higher than in the United States. For example, on December 4th, 1924, according to the daily press despatches the price of Number One Canadian Northern in store at Port Arthur or Fort William was $1.58¾; American Number One Hard Spring stood at $1.54¾ at Chicago, **a difference favoring Canada by 4 cents a bushel.** (Sometimes this difference is considerably more.)

Costs Less, Sells for More

On these four items alone, as quoted above, the extra profit to the Canadian farmer comes to 48 cents a bushel. **These are the conditions which have made Canada the greatest exporter of wheat in the world.**

A Diversified Country

Wheat is not the only crop in Canada. At the recent International Show at Chicago, Canada took prizes for her corn, oats, barley, timothy, clover, peas, flax, rye and alfalfa, as well as the championship and sweepstakes in wheat. She also took championships and first prizes for horses and cattle, and carried off more than three-quarters of the prizes for sheep. Canada's dairy products have increased by $164,000,000 since 1900. Canada's apples are world famous.

Write your name and address on the coupon below and we will send you a free illustrated book on Canada, giving you details about stock-raising, grain growing and fruit farming. Canada wants more good farmers and will be glad to give you information and official advice. Write today.

PLANT STOKES SEEDS
for The Very Best Vegetables

By concentrating our entire effort on vegetable seed problems, we have developed certain seed stocks which should have a place in every gardening operation. Don't fail to give Stokes Seeds a trial this year. You will quickly see the difference. No planter should be satisfied with his seed unless it is the best obtainable.

Our policies include:
1. Simplified variety list—emphasizing only the very best stocks.
2. Germination tests printed on every package.
3. Chemical treatment of all seed for the eradication of surface-borne disease.
4. Orders filled the same day as received.

More than **400,000,000** *pounds* of cull apples last year

Most of these culls were caused by aphis. These insects are very destructive. They not only stunt and deform the fruit, but also retard tree growth and help spread scab and blight.

Damage by aphis can be prevented by spraying with Hall's Nicotine Sulphate. It contains 40% pure Nicotine—the deadliest aphis poison known.

Being a vegetable extract, it does not harm blossom, fruit or foliage; but it does kill aphis every time.

A ten-pound tin makes 800 to 1100 gallons of spray. The cost is less than 2c a gallon. Buy from your dealer. If he cannot supply you, send us your order along with his name.

NOTE—Hall's Nicotine Sulphate is also deadly effective against red bugs, leaf hoppers, thrips, psylla and many similar insects.

It mixes easily with Arsenate of Lead, Lime Sulphur and any other standard insecticides.

10-lb. tins, $13.50
2-lb. tins, 3.50

State Horticultural Meetings

Pennsylvania Fruit Growers Discuss the Latest Developments in Orcharding at Harrisburg

By S. W. FLETCHER

Concluded from Last Week

SOME growers reported very bad infestations of rosy aphis in late summer, and raised the question of control. According to H. E. Hodgkiss, this insect cannot be controlled at that time of year, but only in the delayed dormant period; if killed then, there will be no trouble later. With the green aphis, however, there is a reinfestation after the delayed dormant period, usually in June, and especially on water sprouts.

The question of how much nicotine to use—whether one pint or one and a half pints to 100 gallons, depends entirely on how thoroughly the spraying is done. It takes a certain amount of nicotine to kill the insects anyhow. A man who applies five gallons of the stronger spray to a tree may get as good results as the man who applies eight gallons of the weaker spray to the same tree.

Causes of Spray Burn

Russell Worthington, of West Chester, has found the use of shredded oiled paper in hampers an effective and cheap means of preventing apple scald. Good results from its use in apple barrels were reported from Adams county.

The very unusual amount of spray burn on foliage and russetting of fruit last season was due chiefly to the weather, and much of it was not preventable. The growing conditions were such that both foliage and fruit were tender all the season. Adding lime would have helped some.

According to Professor Hodgkiss, further immunity can be secured by adding the spray materials in the right order; that is to say, fill the tank with water, then add the calcium caseinate, or spreader (if using it), then the lime-sulphur, and finally the lead. Mixed in this way there is no black precipitate, but a clear solution.

Bank Storage Ventilation

R. D. Anthony, State College, reported on experiments in ventilation of common storage cellars, showing quite conclusively that the temperature of the ordinary bank cellar (not the storage built entirely above ground) is controlled the year around, not by ventilation, as was formerly supposed, but by the temperature of the ground itself, and that no amount of ventilation can affect it more than one or two degrees. Constant ventilation is necessary, however, to change the air in the cellar and keep it sweet.

The ground temperature (that of the dirt floor) is about fifty-four degrees in August, and drops by almost imperceptible gradations to about thirty-three degrees in winter, and the storage temperature with it. He finds no value whatever in the small ventilator shafts commonly used on storage cellars. Sometimes they serve as inlets, sometimes as outlets; you never can tell. No opening less than four feet in diameter is worth while.

The reason why apples will actually keep better in the shade out of doors during late September and early October than in a bank cellar is because the ground temperature—hence the cellar temperature—is high then, perhaps around fifty degrees, and cannot be brought lower; while in the open the apples would get the benefit of the cool nights and be held at a lower temperature part of the time at least.

Storage Cellar Construction

Speaking on "The Construction of a Concrete Storage Cellar," N. S. Grubbs gave the following figures on capacity:

	Bulk	Crates
14x 35x 8 ft.	2000 bu.	1500 bu.
20x 40x 8 ft.	3000 bu.	2300 bu.
30x 70x10 ft.	10,000 bu.	7500 bu.
40x100x10 ft.	20,000 bu.	15,000 bu.

This allows for aisles, and the walls. He recommended the following mixtures:

	Cement	Sand	Crushed stone
Footings	1	2½	4
Walls	1	2	4
Roof	1	2	1

The arch type is suitable for cellars of small capacity, not over twenty feet wide. The cellars of bank barns can be adopted for storage purposes by insulating the floor above. This may be done with double floors and building paper; or two inches of cork; or stuffing straw in the space between the rafters. B. F. Wolf, near West Chester, built a storage for $2000 and practically paid for it in one year thru the increased price he received for his apples; he could get only 65 cents a bushel in the fall, but sold for $1.25 a bushel in the winter.

Citrus Fruits—the Apple's Rival

C. J. Tyson, of Flora Dale, spoke on "What Our Competitors Are Doing." After reviewing the conditions that prevail in the Pacific Northwest, New York, Virginia and other competing apple-producing states, he concluded: "We can meet this competition best by growing good fruit and packing it carefully. We have real advantages over many of them, especially in our near-by markets. If money is to be made in apple growing anywhere, we have a fair chance in Pennsylvania.

"But, after all, the competition that concerns us most is not apple, but citrus. An oversupply of cheap oranges will turn the peddler and the fruit stand away from apples, since oranges will stand more abuse and yield more profit. And there are too many orange and grapefruit trees in Florida and California owned by health and pleasure-seekers who do not need to make a profit. This makes hard competition for the apple grower whose bread and butter depends on profit from his orchard. It was the deluge of cheap oranges and grapefruit which put the final crimp in the markets last year; and even this year, with only a moderate crop of apples, comparatively cheap oranges have kept the prices from going as high as they should.

Growers' Ideas about Packages

"I do not know the remedy; perhaps there is none. People are consuming more fruit and fruit products. Nature takes a hand now and then in the shape of a freeze, and things are balanced up. After all, competition keeps us on our toes to do our best, and if we do just that I believe we shall survive."

The growers' experience meeting on packages was led by Porter R. Taylor, of the State Bureau of Markets. D. M. Wertz, of Waynesboro, finds an increasing demand for bushels instead of barrels, except for export. He warned growers to watch for defective chestnut staves, made from blighted trees.

P. S. Fenstermacher, of Allentown, concludes, after several years' trial, that apple packing in the standard Western box is impracticable in Pennsylvania, except when they can be sold locally to a personal trade; if put on the general market they are discounted in favor of the better known Western box pack.

S. C. Eschelman, of McKnightstown, is partial to the paper box for direct marketing. The mineral oil used in making the box prevents scald, so that wrapping the apples with oiled paper is unnecessary. This package costs twenty-six cents for the bushel, twenty-one cents for the half bushel, and sixteen cents for the peck. He gets nearly $1.00 a bushel more for his fruit than fancy Western apples bring.

L. M. Marble, of Canton, exhibited one of his homemade bushel crates, and explained its construction. It lasts longer than ordinary crates and has rounded edges, so that no fruit is bruised. A diagram of this crate will appear in the Proceedings.

Advertising Pennsylvania Fruit

H. C. Barker, of West Chester, manager of the co-operative association of fruit growers at that point, described the methods of advertising "Brandywine Fruits" in West Chester, their chief market. One of the most effective was a banquet which the association tendered to the merchants and bankers. Display ads in the local papers, a booth at the fair, colored posters and several thousand recipe books were also found useful. The aim is not so much to increase the consumption of fruit as to capture the trade that already exists.

According to Howard Lewis, of

TELL the advertiser you saw adv. in Pennsylvania Farmer.

here's The Corn-

"Lancaster County Sure Crop" Variety

Talking about real value—"Lancaster County Sure Crop" is a corn that has it! Not always a show corn, or blue-ribbon winner—but for general all-around use—here's *the* Corn! You should have our Catalog, and read more about this Corn and the nine other kinds offered. This Book is FREE—write for it today!

Fills the Silo

"Lancaster County Sure Crop" corn does this right along—year after year. In good years and under bad conditions. Grows a tall, very leafy stalk. Develops early. Withstands drought. Will develop corn well to the North. Makes a richer ensilage than most other varieties. Used for more silos every year, and over a wider territory than ever.

Fills the Crib

It paid many an Eastern farmer to have Lancaster Co. Sure Crop last year. It came through with a good crop of hard corn, while many other types didn't! Matures early, husks easily. Shells extra well. Rich in protein. Suited for rough and ready culture. Don't require the richest soils. Pleases and pays its growers.

Good, Sound Seed Corn—Tests 92% to 98% germination

Ten kinds of it—brought into our warehouse last fall, hung on racks, dried right, cured right, cleaned clean. Tested and sound! Scores of recent tests showed above percentages—all because of the right kind of care it received. But it's all for your benefit! Planting such seed will pay you—anyway in such a year as this one is!

Costs You Only 50c an Acre!

Yes, that's all! What other farm-crop can you plant at such low cost? And think of what good sound Seed Corn will mean to you, rather than taking chances on doubtful seed. Buy our Seed Corn from this List, and start right for your 1925 crop.

New Catalog FREE

Hoffman's FARM SEEDS 1925

Kirby Poultry Farm

Our Heavy Laying Flock of White Leghorns

By H. E. CLOSE, Cameron County, Pa.

ABOUT four years ago, we began the poultry business in a small way. At that time a few birds were purchased, they were the foundation stock for the flock which we have at the present time.

From the very beginning the flock was culled, by observing the hens as they moulted, color of combs and bleaching of the legs and beaks. We made it a practice to cull every day. As soon as a bird showed signs of loafing, it was taken from the flock.

While this was a good method, we were not satisfied, so trap nests were installed in July, 1921, and since that time every bird on the farm has been trapnested. We believe this is the most accurate and reliable method of culling. Each hen is banded with a numbered leg band and has a chart corresponding to her leg band number; every day she lays the fact is recorded on the chart.

Every Chick Is Pedigreed

All breeders are given a rest of at least six weeks previous to the breeding season, then they are grouped according to their egg production for the preceding year. Then these groups are mated with males from high producing birds. No bird with a record of less than 150 eggs for the previous year was used in the breeding pens the last year. All breeders are selected from at least one-year-old stock.

Mr. Close and his 321-egg hen.

In the highest producing pens each egg is marked with a number corresponding to the leg band number and such eggs are placed in compartments by themselves. As soon as the chicks are hatched, they are wing-banded and a record kept of the chicks from each hen. This is the way in which our birds are pedigreed.

We have kept a poultry calendar in co-operation with the farm bureau and Pennsylvania State College for the past two years. The flock of 238 pullets completed their year on the last day of October with an average egg production of 201.8 eggs per bird. The highest bird in the flock completed her year with 321 eggs.

Self-feeders for Grain and Mash

Culling and breeding are very essential in producing a flock with a high average but feeding is another important item. Our young stock is allowed to run on the range where fresh water is available at all times. They are fed a grain mixture of wheat and corn, and a growing mash is kept before them in self-feeders at all times unless there is danger of them laying too young. As soon as the cockerels are six to eight weeks old they are removed from the flock.

The pullets are brought into laying quarters when about four to five months old, so they will not be thrown into a moult by being moved after they have started to lay. During the winter they are fed a grain mixture of two parts of cracked corn and one of wheat. A mash of equal parts of corn meal, bran, red dog middlings, ground oats and beef scrap is kept before them. Semi-solid buttermilk is fed the year round. Cabbage supplies the green feed for the winter.

Grain Fed at Night

The feeding in the summer is changed to a small extent. Sprouted oats replace the cabbage, and are fed in the wet mash once a day in order to keep up the production during the latter part of the laying year.

All the grain is fed at night unless the weather is extremely cold, then a small amount is fed in the morning. The wet mash is fed about ten o'clock in the morning. Most of the chicks are hatched between March 15 and May 15.

In addition to culling for high production, great care has been exercised in the breeding work to eliminate small, ill-shaped or tinted eggs. Hens producing eggs of this type are culled from the flock, as are the poor layers. As a result of this practice we receive within a few cents of the top price for our eggs on the New York City market.

Brooders for Turkeys

Can turkeys be successfully raised in a coal heated brooder? I have never heard of it being done and would appreciate your advice.—L. A. D., Northumberland County, Pa.

It is difficult to raise turkeys successfully with a coal burning brooder stove. The limited range in the brooder house does not give them natural conditions. The value of a large flock of poults is enough that few turkey raisers would care to risk them all around a brooder. I am sure the mortality will be much less if they are hatched and brooded by hens or the turkey mothers.—R.G.K.

Managing the Incubator

The book of directions with my incubator says that the eggs should be turned and aired twice a day from the fourth to the eighteenth day. Should I continue doing this after the eighteenth day? Should I put moist sand in the egg chamber at the very beginning or later?—C. S., Middlesex County, N. J.

After the last turning of the eggs on the morning of the eighteenth day we always close the incubators and never open them until the completion of the hatch. If the machine is operated in an upstairs room I think it pays to keep the moisture dish under each egg tray. When the air in the incubator is moist, there ss moisture drawn from the eggs ng incubation.

dding moisture to the egg chamber does not add moisture to the . It does keep them from drying and seems to make hatching er. The last time the eggs are ned some operators soak woolen hs in hot water and place them the eggs for a few hours. This rates the air in the machine with sture and the chicks seem to come faster. Usually it is best to add sture according to the directions he machine you operate.

he location of the machine demines the moisture conditions to rge extent. A ventilated cellar he best place because the air is dried out before passing into machine like the air in an uprs room which may be heated by es or a furnace.—R. G. K.

---

hen Eggs Won't Hatch

HEN the incubator eggs are tested for fertility during the ter the poultry keeper sometimes more infertile eggs than were cted. At the end of the hatch ay be counting on at least fifty ixty chicks from each 100 eggs, only thirty or forty chicks ar- .

amination proves that many are unhatched altho they con- chicks. Some chicks have died making a couple of pecks thru shell. Others have died at varistages of development thruout hatch. But the most discouraging ure will be those chicks that had strength to develop but reached limit of their vitality before emng from the shell.

Don't Blame the Incubator

hese losses are often blamed on incubator when the care of the ding stock is responsible. I find plenty of sour milk in the raof breeding stock is better than scrap as a source of protein. An ndance of green feed seems to in making eggs hatch. Many try keepers find that ground al- in the mash and a liberal feedof sprouted oats has a great ince on the hatchability of eggs.

other words it seems as if vita- in the feed spell life for the ks. Exercise and normal weight the breeding stock are conducive tchable eggs. Hens that are at may lay eggs that are inferor eggs with weak germs. On other hand hens that are half fed ot lay many eggs and I believe that are produced may lack a g vital germ.

Eggs Don't Yield Good Chicks

hen the breeding stock in winter about the same condition as in spring, when the feed on the is helpful to bird life, then eggs laid in winter will produce of more nearly the type of produced after the hens are oors on free range. It takes some and a lot of work to keep the ding stock in the pink of condibut when that is accomplished poultry keeper finds that the day incubator eggs hatch is apt to be of thankfulness and not one of ouragement.

incubator cannot produce good s from poor eggs. Feed properry and keep down the frozen bs, and mate the flock in the proportion of males and fees. Then the incubator has a fair ce to do its work.—R. G. K.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

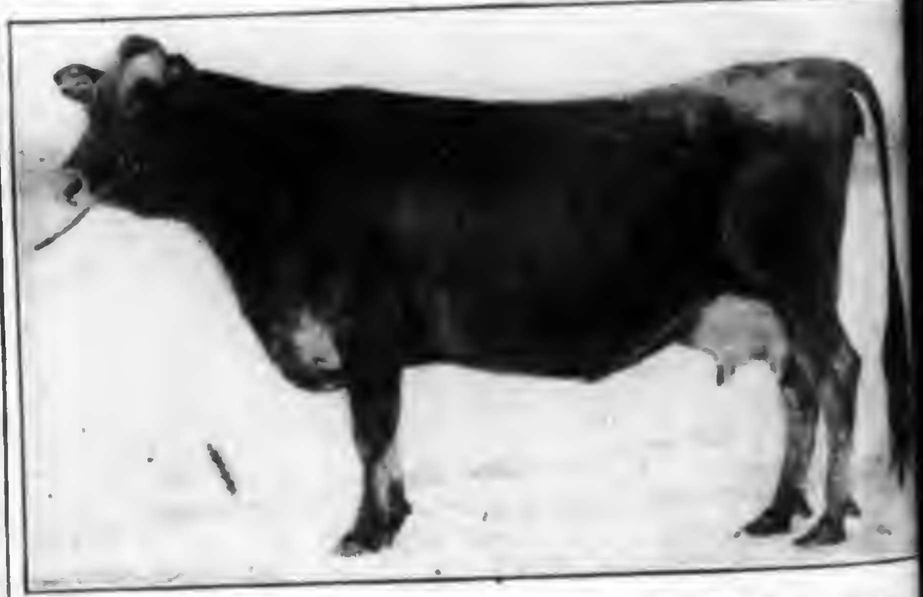
Best Way to Feed Stover

What is the best way to feed corn fodder when no silo is used? Will it be just as good feed if cut or shredded, or does the best part of it such as leaves become so fine that some is lost? I have Guernseys and feed only corn fodder twice daily and oats and pea hay (very few peas) once a day. I use a chop mixture of 200 pounds ground oats, 100 pounds wheat bran, 100 pounds wheat middlings, and 100 pounds of forty per cent gluten. Can you tell me how to make this better at reasonable price?

When giving cows salt in their feed can you feed too much? Have been giving them about a tablespoonful each once a day. Should a cow have all the roughage she will eat in about one-half or three-fourths of an hour after feeding? I have a three-month calf that is biting at boards. Am feeding milk, oats and shorts, and a little salt.
—W. M., Lycoming County, Pa.

I would advise you by all means to cut or shred your corn fodder. It will go farther in feeding your cattle because they will eat more of it. Not much will be lost in the way of fine leaves and the part that remains uneaten will make fine bedding.

Your grain mixture is somewhat higher in protein content than is necessary for your cows, but with corn and hominy feed at present prices it would not pay you to add them to your present mixture. The carbohydrate and fat content of the grain mixture is low and you will have to feed grain rather liberally or your cows will have a tendency to get thin.



Option's Ima Daytonia, owned by the Pennsylvania State College.

Mineral Matter Needed

Since you have no silage, your grain mixture ought to contain some linseed oil meal. This will give laxative properties to the ration which will be beneficial to the health of the cows. I would, therefore, suggest that you put fifty pounds of linseed oil meal in place of fifty pounds of the gluten meal.

One tablespoonful of salt daily is not too much for your cows. It is also advisable to let the cows have all the roughage they will eat up clean in one-half to three-fourths of an hour, two or three times daily.

It would appear that your calf is not getting enough mineral matter. I would suggest that you give it a little steamed bone meal if such is available. Wood ashes will serve this purpose or ground limestone, or ground rock phosphate. If you mix one of these substances with at the rate of one part of salt to parts of the steamed bone meal, w ashes, or other mineral substit and allow your calves and o stock to have free access to it, it not likely that you will have furt trouble from desre to eat boa dirt, etc.—A. A. B.

Facts about Vitamins

I have a fine appearing Jersey cow with a very large udder but she fails to give much milk. She has characteristics of a fine dairy type. I am inclined to believe that vitamins are lacking in her feed. We feed ensilag good clover hay, oats and buckwheat chop, and cottonseed meal. Will you please advise me just what is best to do with such a cow?—G. D., Somerset County, Pa.

Something else than the lack vitamins must be the cause of y Jersey cow not producing as hi yield of milk as she should. A tion which has clover hay and for roughage ought not to be p ticularly lacking in vitamins.

Vitamins A, B and C

As you know, there are several ferent kinds of vitamins. There the Vitamin A, which prevents eyes and is conducive to growth the animal. It is found most ab dantly in butterfat, in cod liver cream, milk, alfalfa (which is bleached too much in sunlight maintains the green color), clo hay (which is well cured and green colored), green alfalfa, g clover, green grasses, green leaves cabbage and tomatoes.

Vitamin B, the one which p vents paralysis, is found most ab dantly in the germs of plants, wheat middlings, in yeast, toma milk, skimmilk and green for plants such as clover, alfalfa, etc. is fairly abundant in most com grains.

Vitamin C is the one that p vents scurvy. It is found most ab dant in green alfalfa, green clo green grasses, orange juice, and the white portion of cabbage; al in tomatoes and rutabagas.

Should Use More Linseed Meal

I believe your grain mixture co be improved by an additional amo of linseed oil meal. For instance, your grain mixture were to be m up of 200 pounds oats and bo wheat chop, 100 pounds cottons meal, and 100 pounds linseed oil eal, it would be slightly more laxtive in its nature and the increased rotein content would be conducive o milk flow. I would also suggest hat you massage the udder several imes daily. This will have a tenency to soften it, especially if you se a little vaseline on it while you re massaging it.—A. A. B.

Ima Makes a State Record

WITH a record of 12,659 pounds of milk and 621.5 pounds of utterfat, Option's Ima Daytonia, a ersey cow owned by the Pennsylania State College, recently establlished a new state record in the 305- ay or AAA division. Raleigh's Maesty 350010, owned by White Horse arm, Paoli, Pa., formerly held the ecord for Pennsylvania in the 305- ay division with a production of 3,555 pounds of milk and 613.4 ounds of butterfat.

Option's Ima Daytonia was bred y G. B. Dayton, Birchardville, Pa., nd was purchased by the College argely because of her outstanding reed type. She is now milking over fty pounds daily, according to P. D. ones, dairy herdsman.

Fed by a Student

Her feed for the entire year durng which she made her ten months' ecord cost $200.00 and the returns or her milk amounted to $776.00. ince all the milk produced at the ollege dairy barn is sold either as rade A or Certified the income bove the cost of feed is more marked han if ordinary market milk were roduced and sold.

During the year she consumed near- twelve tons of feed consisting of 233 pounds of grain, 346 pounds of olasses, 843 pounds of dried beet ulp, 8307 pounds of silage, 4071 ounds of green feed, 1860 pounds roots and 2872 pounds of alfalfa nd mixed hay.

She was fed and milked thruout e greater portion of the year by . W. Eno, from Honesdale, Wayne ounty, a student enrolled in the airy husbandry course.—A. L. eam.

Outclassed Her Dam

A TWO-YEAR-OLD Holstein heifer in the University of Delaare herd, U. of D. Ona Ormsby eatrice 702042, has completed a ery creditable ten-month record uring the past month. A. E. Tomave, animal husbandryman, reports at during the ten-month period is heifer produced 11,438 pounds milk containing 458.79 pounds of utterfat, equivalent to 573.45 ounds of butter. She carried a calf or 229 days of this period and will e ready to begin another record bout March first. This is the same eifer that in March, 1924, produced 3.346 pounds of butter in seven ays, which placed her well up mong the best cows in her class. he had an average fat test of four er cent during her test period which well above the average test of the Holstein breed.

Record Shows Influence of Sire

U. of D. Ona Ormsby Beatrice was red and raised at the Experiment tation Farm at Newark. She is sired [illegible] Holm Ona Ormsby, the [illegible] sire at the University arm. He belongs to a family of igh producing cows. Her dam is [illegible] Apple Rosewood 427723, cow of ordinary production. Comparing the record of U. of D. Ona rmsby Beatrice with that of her am, it is found that she produced 932.7 pounds of milk and 136.37 ounds of fat more as a two-yeard heifer than her dam produced as six-year-old cow. This shows the esult of using a sire from high proucing dams, upon cows of ordinary roduction.—T.

DODGE BROTHERS COACH

Dodge Brothers Coach measures up in every detail to the high standards of its builders.

Low, graceful and sturdy, it looks and performs the part of a true aristocrat.

The interior is roomy, comfortable and inviting.

The lacquer finish is exceedingly attractive in Dodge Brothers blue with body stripe of cartouche yellow.

The chassis is the same on which Dodge Brothers have concentrated all their experiences and resources for a decade. Comfortable riding qualities and dependable performance are therefore obvious attributes.

The price is $1095 f. o. b. Detroit

Fill a Big Job
Qualify in Eight Weeks to Earn Real Money in the
Auto and Tractor Business
Come to the great shops of McSweeny where thousands of dollars have been spent in the latest tools and equipment. Stay only eight weeks, then step out as an expert. My training made Louis Beimer a Foreman at the age of 24. It started O. H. Justus in what is now a big business. It enabled E. Rushfeldt to earn $10 a day. It has helped hundreds of others to do as well or better.
Big Firms Need Men
I get calls every day from Garages, Battery Stations, Auto Repair, Welding Shops, and other successful firms for McSweeny men. The big fellows need trained men right away and they know where to come for them.
Railroad Fare Free
That's my proposition for a *short time only* to help fill these vacancies. But that's not all. If you write *at once* I'll give you the lowest tuition rate ever offered.
Get This Big Free Book
This large illustrated book tells how others are succeeding. It tells many things you ought to know about Autos and Tractors. Write for it and short-time offer now before it expires. Write to nearest school for it today.

League Adopts New Policy

Now Supplies a Large Part of New York Market

NOT since the pooling plan was introduced in the Dairymen's League in New York and neighboring states has any announcement so aroused and interested the dairymen of the East as the news that the League will no longer buy any milk except for its fluid trade. No longer will it purchase milk for evaporating, condensing, or for butter or cheese. It is even doubtful if it will continue the manufacture of ice cream, except at the Utica plant.

The League will sell or lease all of its manufacturing plants, and has already sold all of its stock of "Dairylea" evaporated milk to Bordens', who will continue to manufacture the product under the "Dairylea" name. Borden's have agreed to put up at least 200,000 cases per year, and to pay a royalty of $10,000 a year for the use of the brand name, which has now become nationally known to grocers and consumers.

The League has protected its rights in every way in making these changes, and will be able to return to its present activities by giving proper notice, if at any time it seems necessary or desirable.

The directors announce that they have no apologies to make for this abrupt change in policy. Nor is the change any reflection on the policies of the last three years. It is but a national outgrowth of the constructive work of the past three years. The only surprising part of it is that the organization is able to take this position so soon.

The present step could never have been taken until a certain amount of capital, prosperity and standing in the business and dairy work had been won. And these things the League has been steadily acquiring, tho it has not been able to pay its members fancy prices while so doing. It has weekly and monthly and yearly reiterated the necessity of building up these things, and has emphasized their importance over maximum monthly checks to members while so doing.

Advantages of the New Plan

Under the new plan the Dairymen's League ceases to be a surplus organization, and becomes a fluid milk concern only. The League will no longer worry over its membership, but will avail itself of its right to cancel contracts. It is expected that all contracts will be handed back in non-fluid territory or to all producers not in a position to produce Grade A or Grade B milk.

This will relieve the League of the necessity of manufacturing into butter, cheese or evaporat milk. It will mean that the prod ers' checks will be based on a p that very closely approximates C 1 prices. The League will be to pay as much for milk as any er in the field, for now it has markets necessary to take all fluid milk its members can produ

A vast saving in operating expe will be possible. Three-fourths the credit department will be missed, and all of the sales force, Bordens will attend to sales for erly handled by these men. Opera ing expenses of manufactur plants will be eliminated as will purchase of supplies.

Has Made Extensive Purchases

The new plan was made po by the recent purchases made by League—purchases which were huge that they have attracted attention. The League was able pay cash for the most of these businesses.

The purchase of Clover F Company's big string of plants one of the first. This concern sixty-eight baby stations in York City and a huge retail bo milk trade of the best sort. With purchase the League secured all the city trade. At first some bers worried because Homer prod ers, some of them leaders in the pool element in the state, would sign up with the League. But League found it an advantage these men would not join the They sent their milk elsewhere the League was not obliged to for it.

The Homer affair showed that trol could be obtained at the end much more effectively cheaply than at the country end. the League had the markets it longer cared whether producers these new plants joined the pool not. In fact, it helped rather to have them stay out. The Lea found that for every dollar inves in the city end it would take dollars in country investments to cure the same control.

Other companies have been boug out until now the League's da fluid trade amounts to about 10, cans. Other momentous changes going on. It no longer needs to ry about the surplus as it has.

The League's retail trade is big it has even had to buy non-pool milk lately. But with creased flow of milk this will not necessary.—M. G. F.

Ration for Pigs and Sows

I wish to ask you what to feed young pigs to make them grow. They are about four months old and do not weigh more than forty or fifty pounds each. What would be best to feed the old ones? I am feeding wheat bran and a commercial mixed feed to young and old.—C. S. A., Montgomery County, Pa.

Young pigs weighing about fifty pounds should have a good growing ration up to the time they weigh from 100 to 125 pounds. The ration should contain more protein than the ration fed fattening pigs and brood sows.

A very satisfactory combination is one made up of the following feeds: corn, four parts; wheat middlings, three parts, and high grade digester tankage or fish meal, one part. The corn may be fed as ear corn, shelled corn, or corn meal.

May Substitute Barley for Corn

In case corn is not available or too high in price, barley may be substituted for the corn. If barley is fed, it must be fed as ground barley as the hog will not digest the whole barley very well. This combination should be fed in such amounts as the pigs will consume daily up to the time that they weigh 100 pounds.

After the pigs have reached the weight mentioned, the wheat middlings can be eliminated by gradually increasing the amount of corn or barley so that when the pigs weigh 125 pounds they are getting a combination of ten parts of corn or barley and one part of tankage or fish meal.

The brood sows should have some meat meal as a source of protein. There are a number of combinations that may be fed, depending upon the price that must be paid locally for feed, and the feeds that are available. At the present market price for feeds, some oats can be used to advantage for brood sows. If corn or barley is available, a combination of six parts of corn or barley, three parts of oats (ground), and one part of tankage or fish meal will give satisfactory results.

Hay for Brood Sows

Bran is not a very good feed for brood sows. If you have some good alfalfa or clover hay it is a good practice to feed this to the brood sows while they are out in a lot. This should be put in a rack so they can consume it at will.

The brood sows should be fed enough feed to keep them gaining at the rate of about three-quarters pound per head daily during the gestation period. To make this gain the sows will require from one to one and a half pounds of the grain mixture per hundred pounds daily. In addition to the feeding suggested, the brood sows should have plenty of exercise daily and good dry sleeping quarters.—W. H. Tomhave.

Mules Gain on Horses

AN ANALYSIS of the principal horse market receipts and prices during 1924 indicates that there were 15 per cent fewer horses marketed in the 67 horse markets of this country in 1924 than in 1923. Prices on draft horses dropped on an average of $15 a head at Chicago and St. Louis, and $10 a head on farm chunks.

The mule is gaining rapidly on the horse in popularity. At Kansas City the market has shifted from 65 per cent horses and 35 per cent mules to 85 per cent mules and 15 per cent horses. St. Louis is receiving twice as many mules as horses. The percentage of marketable horses in the country is showing a tendency to shrink.

The 1924 receipts of horses at Chicago were lower than in any year since 1885.—Frank A. Meckel.

Sold Bull to the Prince

ALLEGHENY COUNTY is more than an industrial center, according to County Agent H. R. Eby and by way of proof he states that a short time ago one of the members of the Montour Valley Cow Testing Association sold a Shorthorn bull to the Prince of Wales. The bull was shipped to join his herd at the International in Chicago. A short time later Beechwood Farms, Sharpsburg, sold their herd sire, Langwater Eastern King, 63072, at private sale to Drew Ten Broeck, Hinsdale, Illinois, for $35,000. This is the highest price ever received for a Guernsey bull at either public or private sale.—A.L.B.

Something New in Plant Food

AN ENGLISH company has been organized by Lord Elveden to supply to the farmers and horticulturists in England a reagent used for the preparation of artificial manure. The process for making artificial manure was developed in England largely because of investigations carried out at Rothamsted Experiment Station, Harpenden, England.

The principle of the process is quite simple. When straw is mixed with sulphate of ammonia and small amounts of other reagents and kept wet, it begins to decay and gradually turns into a dark-colored product resembling natural manure.

It has been suggested that for localities where livestock is not kept in large numbers but where intensive farming is carried on, a supply of artificial manure might be a boon to the producers.

The entire questions hangs, of course, on the cost of the product. If artificial manure of good quality can be produced at a cost not to exceed $3.00 or $4.00 per ton, it probably would be worth while, under certain conditions, to manufacture such artificial manure.

The Cost Will Decide

There are places where large masses of wild grasses, sedges, cattails, bracken, and even corn stalks and spoiled oat and wheat straw, might be utilized to advantage. Sir John Russell, Director of the Rothamsted Station, told the writer that for conditions as they exist in England the production of artificial manure would be practicable if the cost of the straw is not greater than $5.00 per ton. Efforts are being made to exploit the process in a commercial way in the United States.—J. G. Lipman.

The Farmer's Wife Knows

that trying to make a poorly equipped farm pay is a losing battle. What she may *not* know is this—that by borrowing money through

"The Mortgage That Pays Itself Off"

the farm can be put promptly on a profitable basis, with new equipment and improvements. *There will be no burden paying it off.* Easy semi-annual payments for 33 years and the farm is clear. Straight 6% interest plus 1% reduction of principal each year.

DEAFNESS Conquered by NEW Radio Idea

Wonderful New Invention Costing But a Trifle, Makes it Inexcusable for Anyone to Remain Hard of Hearing

SENT ANYWHERE FOR 10 DAYS' FREE TRIAL

Now comes a new radio discovery which should bring joy to all deaf persons and their families. Radio science has wrought another miracle. A miracle for the deaf—giving good hearing at once to poor ears and ending the discomfort and embarrassment of deafness.

The makers of the famous ACOUSTICON, for 20 years recognized as the world's best hearing aid, announce a vital refinement to this remarkable little device.

The ACOUSTICON is now based upon the same sound-sending, reproducing and amplifying principles of the radio itself—with the deaf person as his own receiving and sending station.

Like the radio, the ACOUSTICON has a transmitter and a receiver. Sensitive to a pin drop. So powerful they pick up any sound the human ear can hear and deliver it clearly, distinctly and resonantly to the impaired auditory nerve.

FREE 10 DAYS' TRIAL

The new radio-built ACOUSTICON is a marvel of lightness, comfort, inconspicuousness. A joy to wear and use. We are so sure it will delight you, regardless of what other device you are now using, that we invite you to try it 10 days without a penny of risk. No red tape to go through. No deposit or payment of any kind. Just send your name, address and free trial request to the DICTOGRAPH PRODUCTS CORPORATION, Dept. 1301-J, 220 West 42nd Street, New York City.

When your tractor loafs

Just between seasons, when there is neither plowing nor harvesting to be done, when help is easier to secure, then is the time to make real money with a

Lane Tractor Sawmill

Scattered through the East are thousands of isolated wood lots too far from large sawmills to make logging profitable, too small to pay for the installation of a large unit. Here the Lane Tractor Sawmill, set up and in operation in eight hours, is a real money maker.

Low in first cost, and readily portable, requiring only the power of a small tractor to move or run it, this mill with its capacity of 8,000 feet or 500 railroad ties in eight hours is a farmer's gold mine.

If you have a wood lot, or see the great opportunities offered in your neighbor's lots, write us.

Use My WEAR-MORE Harness 30 DAYS FREE —then decide

Made in all Styles

Quickly Adjusted

"I take your word for it if not then convinced—simply return harness at my expense."
John C. Nichols, Pres.

$5 Down if You Decide to Keep It; Balance on Easy Monthly Payments

Just do me the favor of sending your name at once. I want you to get my big free book which tells the interesting story of this strongest harness made. See how I've entirely eliminated rubbing and sea-sawing between leather and metal. *Doubled life right here!* Learn how short-snubbing of leather under buckle edges or around narrow metal units costs you money in breakdowns and repairs. See how I overcome this — *how I learned this priceless harness secret from a pail handle.* I believe you owe it to your pocketbook to post yourself. All I ask is that you test Wear-More superiority severely and thoroughly, at my risk and expense. That's fair, isn't it? Then write me today for book and new reduced prices.

JOHN C. NICHOLS, *President*
1806 Erie Avenue, Sheboygan, Wisconsin

This Strap was Short-Snubbed

See how it's cut—oil has been squeezed out letting the strap crack. Like carrying pail with wire handle.

No Short-Snubbing Here

See how patented WEAR-MORE buckle lets strap pull against flat, broad surface well protected like your hand on the large, comfortable round wooden handle on pail bail.

Free Book On Bigger Value Harness

Free Catalog in colors explains how you can save money on Farm Truck or Road Wagons, also steel or wood wheels to fit any running gear. Send for it today.

Electric Wheel Co.
68 Elm St., Quincy, Ill.

The New IMPROVED Walsh NO-BUCKLE HARNESS
No Buckles To Tear No Rings To Wear

$5 After 30 Days Trial

Send for my big new free harness book. Tells how I send Walsh No-Buckle Harness on 30 days free trial. Use it—prove for yourself that it is stronger, easier to handle. Outwears buckle harness because it has no buckles to tear straps, no rings to wear them, no buckle holes to weaken them. Amazing success—thousands in use in every state.

Costs Less—Wears Longer

Saves repairs. Walsh special 900 steel test leather, which is explained in big free book. Easily adjusted to fit any size horse. Made in all styles: back pad, side backer, breechingless, etc. $5 after 30 days trial—balance is paid monthly. Return to me if not satisfactory. Write today for my big free book, prices, easy terms. Sold direct to you by mail only.

To Please Your Men Folks

What They Like and How They Like It Cooked

I DON'T know where people get the impression that men like essentially different foods than women, except that men usually have little use for fancy, frilly little nothings. They don't care particularly for salads, and they do enjoy hearty substantial dishes.

At a recent ladies' aid dinner, where dark cakes happened to predominate, I heard a woman say, "So māny men don't like chocolate cake!" I wondered, because most of the men of my acquaintaince are very fond of it.

Good, Solid Eats

Obviously one wouldn't prepare the same things for a birthday supper for little girls that would be expected for a threshing dinner. Busy working men like plenty of potatoes (preferably mashed), gravy, bread, sauce, meat or a meat substitute, and pie or pudding.

Almost any man likes pie, and mince is the favorite, probably because it is so rich and filling. Our men are particularly fond of puddings served with sugar and cream, —apple John, apple dumplings, steamed batter puddings, suet and minute pudding.

My husband always had several hired men, and except for the fact that there was so much of it to do, I rather enjoyed cooking for them. I baked beans in a gallon crock and always filled it full. Baked all day in a moderate oven, they came out rich and red, and it was surprising how fast they disappeared. I baked my own bread. Hot rolls, raised biscuits and buns were prime favorites.

Most men like apple sauce, and we have used lots of it this winter. Unless the apples are large, I simply core and quarter them, and when they are cooked I run them thru the potato ricer to remove the skins.

Keep the Bean Pot Busy

By the way, apple sauce is delicious cooked in a bean pot or casserole for several hours, with the skins left on. Sweeten moderately and cook in just enough water to prevent burning.

Where the family taste approves, an old-fashioned boiled dinner is ideal for busy days like wash day or housecleaning days, because everything is cooked together and requires very little attention while cooking. It is hearty enough, too, so that a light dessert is all that is needed.

A big dish of scalloped potatoes, prepared for Saturday, makes a handy dish to reheat for Sunday dinner, and a can of salmon garnished with lemon is an especially nice accompaniment.

One-Crust Pies Can Be Baked Ahead

Cherry, berry and apple pies are always welcome, and these are better adapted to previous preparation than one-crust pies.

Men always enjoy fireless cooker foods because all the flavor is preserved and the result is richer than by any other method. I never have used a commercial fireless, but my "hay box" (price 10 cents for an empty lard tub) cooks things to perfection, and I'd hate to keep house without it.—Mrs. E. M. Anderson.

While Winter's Here

THESE winter days are so lovely that I am taking time off from the anticipation of spring, just to enjoy them. Springtime will bring house-cleaning, gardening and chicken raising all at once. Now we have time to live, and to do a bit of reading on the side. I have just been reading "Timber," Harold Titus' new book,—the first book I have found with forest conservation as its moral.

When Appetites Flag

It is difficult to plan meals at this time of year. The food stored away has palled a bit on our tastes, and our jaded appetites are calling for the fresh green things of spring. So I try to bring out any unusual or much-liked fruit or vegetable (just as I try to use bright cushions and hangings for cheer).

A snowy cloth, glistening glassware, and perhaps a dish of red-cheeked apples for a centerpiece, all have their share in making a simple well-cooked meal acceptable. Nothing is gained by haphazard ways of serving. Eating off colored oil cloth or the corner of the kitchen cabinet does not improve manners.

Plates That Stand Heating

When frying or warming over food, I use a heavy plate to cover it instead of a metal cover, as the plate retains the heat and the food is thus warmed from the top as well as the bottom. We use breakfast plates which can be safely warmed in the oven, and thereby keep the griddle cakes hot longer. We find our buckwheat cakes improved by the addition of a scant half cup of graham flour.

Pieces of pork containing bones are seasoned with sage and pepper (we try to salt the meat just right so it requires no freshening) and baked for dinner with a delicious brown gravy. The meat may be garnished with small round onions boiled almost tender and then baked. Baked potatoes are served and a pleasing dessert of jelly or apple pie.

Our Goal,—a Long Evening

After two such meals, supper may be light, (some of our neighbors omit it entirely after a late dinner) and time is saved for a long evening which is one of the main delights of winter. We have had thirty below zero weather, and four or five-foot drifts, but we enjoy the sunrises and sunsets, the gleam of sunlight on the ice, the black bare branches of the trees against a blue sky, our friends and our books.—Mrs. M. C. Smith.

Curing Furs at Home

IN ANSWER to Mrs. C. I.'s question about preparing furs at home, I send the following directions. This recipe is reliable and has been in our possession for years.

First remove all fleshy and fatty matter from the skins. Sheep skins should have the wool thoroly washed in warm soap suds, and then carefully rinsed.

For each skin use four ounces salt, four ounces alum, and one-half ounce borax. Dissolve these in one quart hot water. When cool enough to put one's hand in, stir in enough rye or other flour to make a smooth thick paste. Spread over the flesh side of the skin, fold together lengthwise and leave for two weeks in an airy place, but not where the skins will freeze.

A Use for Your Dull Knife

At the end of this time, remove the paste, wash the skins and dry them. When nearly dry, work and pull them and scrape with a blunt dull knife, or a piece of hard wood worked to a sharp edge.

The more the skins are worked and scraped, the more pliable they will be. This recipe is good to cure any kind of animal skins.

I often watched the cow boys cure skins when I was a child. They used them to make quirts and long braided whips to round up cattle. To remove the hair from a yearling calf skin, they made a rather thin mixture of wood ashes and water, worked that into the hair side, and laid the skins away until the hair loosened and could be worked off.

Leather Chair Seats Wear Well

Then the process I have given was used for curing the skins. When pliable, they were cut into narrow strips and were used not only for whips but for chair seats. I have also seen chair seats made of hides, fur side up, cut to fit the chair and firmly fastened underneath the rungs. They wore amazingly well.

I have sometimes wondered why more of such work as curing furs at home is not done today. What can be nicer than a woolly sheep skin to step on from one's bed on a cold morning, or for the children to sit on in front of the fireplace? I once made a bedside rug from discarded capes, and never enjoyed anything more.

I hope Mrs. C. I. will let me know thru our paper what success she has in following my directions.—Mrs. E. A. Kern.

A Dash of Lemon

For a pleasing taste to your tea—pour the hot tea over a slice of lemon or for a milder effect, merely drop it into your cup.

It Paid to Make Soap

ONE country woman who is an expert at making soap, earns an income by making soap for other women who furnish their own material; or she sells soap to town and farm ladies of her own making.

When customers bring material she charges from 50c to $1.00 for making an order of soap for one lady, according to amount made, time, etc. She sells her home-made soap by the cake, or number of cakes according to size, from 5, 10, 15c a cake or 4 and 5 cakes for 25c.

Wives of farmers save fat, that would otherwise be wasted and hire this woman to make soap, sometimes enough to last a year. The woman enjoys the work as she has facilities that lessen the drudgery of the task. —Kan.

THEY'LL LIKE THESE

A Group of Good Things for All the Family

PRINCE OF WALES CAKE

1 cup brown sugar
1 tablespoon, each, of lard and butter
2 egg yolks
1 cup sour milk
1½ cups flour
1 teaspoon cinnamon
½ teaspoon, each, of allspice and nutmeg
1 teaspoon soda
½ cup nut meats
½ cup cocoanut

Cream butter, lard and sugar. Add the well-beaten egg yolks, the sour milk, and the flour mixed and sifted with the cinnamon, allspice and nutmeg. Beat hard. Mix the soda in an extra half cup of flour and add last with the nut meats and cocoanut. Bake in a loaf and frost thickly with white boiled frosting.—Mrs. E. M. A.

* * *

FEATHER BEDS

(For internal use)

Beats 2 eggs light. Add 1 teaspoon salt, ½ cup belted butter and lard, 2 cups milk (scalded and cooled to lukewarm), ½ cake compressed yeast, dissolved in the milk, and 3 tablespoons sugar.

Add enough sifted bread flour so that the batter will drop stiffly from a spoon.

Start these at nine o'clock in the morning if wanted for supper. Stir the batter down during the day if it has become very light. About four o'clock put it into cup cake tins (or iron gem pans), let rise till very light, and bake in a quick oven.—I. S. H.

* * *

FARINA DUMPLINGS

Cook 1 cup of farina in 4 cups of milk (or half milk and half water) in a double boiler for 15 minutes. Add salt to taste and butter the size of an egg. Set aside to cool. Then beat in 3 or 4 eggs, season with a little grated nutmeg, and add enough sifted cracker crumbs so that you can just handle the dumplings. They require a light hand. On a floured board, shape them into oblongs. It will do no harm to let them stand for a time, until the rest of the meal is almost ready. Then cook the dumplings in boiling salted water in a covered saucepan, for about five minutes or until they come to the top.

If any dumplings are left, split them lengthwise and fry them for breakfast.

"And what they did not eat that
night,
The queen next morning fried."
—I. S. H.

* * *

POOR MAN'S RAISIN CAKE

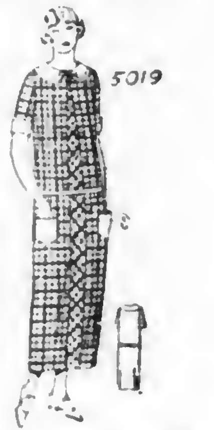
2 cups sugar
2 cups water
¼ cup lard
1 lb raisins
2 teaspoons cinnamon
2 teaspoons cloves

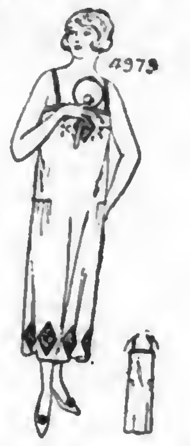
Boil the above ingredients 5 minutes, then add 2 level teaspoons soda in a little hot water, and 3 cups flour. Bake 60 minutes. This makes 2 nice loaves.—Mrs. H. W. B.

To Fill Some of Your Needs

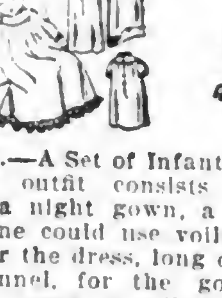
Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

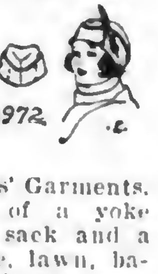
5019.—Neat and Dainty Morning Frock.—Checked gingham was employed to make the pleasing style here portrayed. This model is also attractive in linen, percale, ratine or crepe. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. If made as illustrated it will require 5½ yards of 27-inch plaid gingham and three-quarters yard linen or percale for pockets, collar and cuff facings. The width at the foot is 1½ yard with plaits extended. Pattern, 10 cents.





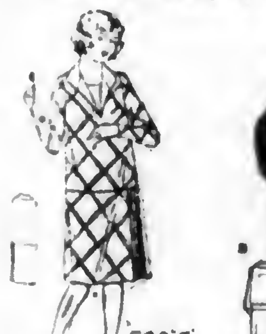
4973.—The Practical and Popular Underslip.—Batiste, cambric, satin, crepe, radium silk or crepe de chine may be used for this model. It may also be made of dress materials such as faille, satin, velvet or flannel, and worn under a tunic. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2⅝ yards of 36-inch material. The width at the foot is 1⅝ yard. Pattern, 10 cents.

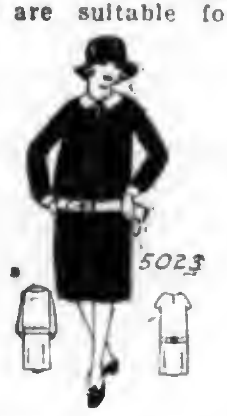




5031.—A Set of Infants' Garments. —This outfit consists of a yoke dress, a night gown, a sack and a cap. One could use voile, lawn, batiste for the dress, long cloth or outing flannel, for the gown, outing flannel, crepe or silk for the sack, and lawn, silk, crepe de chine or poplin for the cap. One size. If made as illustrated the dress will require 1⅞ yard of thirty-six-inch lawn or nainsook, and 2⅝ yards of edging 3½ inches wide for the ruffle. The gown will require 1⅞ yard of 27-inch material. The sack seven-eighths yard of 27-inch material and the cap one-half yard of 18-inch material. Pattern, 10 cents.

4972.—Caps for Little Folks.—These caps may readily be fashioned from felt, broadcloth, velvet, heavy silk or satin, or from hatters' plush or velours. They are suitable for boys and girls. The pattern provides both styles illustrated. It is in four sizes: 18, 20, 22 and 24 inches head measure. No. 1 will require one-half yard of 40-inch material and No. 2 will require three-eighths yard for a 22-inch size. Pattern, 10 cents.





5024.—For the Growing Girl.—Flannel blocked with fine braid to simulate bias plaid was used for this design. It is equally attractive in plain material. It will develop well in taffeta or wool rep. Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 2⅞ yards of 36-inch material with three-eighths yard of contrasting material for collar, revers, facing and vestee. Pattern, 10 cents.

5023.—Popular New Features.—Jaunty and trim is this design. It may be developed in taffeta or flannel, linen or pongee. The dress is in one piece. The jacket is box shaped. Four sizes. 8, 10, 12 and 14 years. To make the costume for a 12-year size will require 3¾ yards of 40-inch material. The dress alone will require 2¼ yards. To make collar, belt and cuffs of contrasting material will require one-half yard. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

OUR COMMUNITY CLUB

Wartime Activity Showed Way to Peace and Harmony

IT HAS been said, "If we learn to play together we shall learn to work together." In the case of our community club we learned to work together first. The people here were living more or less for themselves alone, each family pursuing its work and pleasures with no thought of neighbors except at times of death or calamity. They took little interest in their rural school.

The First Step

During the World War, in an effort to help the cause, a few women met at one of the farm homes and organized a Red Cross chapter. They met once a week at the homes of the members, choosing as their leader a woman with a natural aptitude for sewing.

Thru this joint work the women learned to talk over their problems, and found how much they had in common. When the roads and weather became bad, the men were invited to join them in all day fortnightly meetings. Each family contributed to the dinner, and while the women sewed, the children played games and the men talked together.

Afterwards

When there was no more need of pajamas and bandages, everyone felt that the meetings had given them something too good to lose. So a community club was formed. It was decided that every man, woman and child in the two adjoining school districts should be eligible to membership. The dues were kept so low that even the poorest would find them no hardship.

It was agreed that all day meetings should be held every two weeks in winter, with a regular committee to assist each hostess in planning the menu, and every family contributing toward the dinner; that evening meetings should be held once a month in summer at which the hostess might serve only light refreshments; and that all meetings were to be instructive as well as entertaining.

Home Talent Scores

It is surprising how much talent may be found in a square mile of lonely country if it is given a chance for outlet. We counted among our members farmers and their wives, hired men, back-to-the-landers, retired rural and city teachers, college graduates, high school students, rural school pupils and babies, and all found mutual enjoyment.

Old and young joined together in music, games, card-playing and contests, proving that in a rural community the entire family holds together much better in work and play than does the average city family.

Everyone was encouraged to air his views, and men and women who never dreamed they had any talent, found themselves public speakers. Boys and girls had the splendid practice of standing on their feet and expressing their thoughts to an audience. Some attempts were made to follow parliamentary rules, with fair success so long as the arguments were not too exciting.

Travelers Tell Tales

Those who had traveled related their experiences, and those who had stayed at home and achieved success tried to help others to do the same thing. The State College furnished speakers, men and women experts in their particular line.

The school children entertained one evening and everyone began to take more pride and interest in their own school. One meeting that was thoroly enjoyed by the women was the annual men's meeting at which the men furnished the entertainment and cooked and served the food.

Rough Places Not Wanting

As is always the case there have been minor disagreements, but we have all tried to be considerate of each other's feelings. Everyone is very loyal to the club and all are more friendly with their neighbors because the club has given them a chance to know them better.

For the guidance of others these simple rules are suggested:

1. Limit the membership to every family within a certain area, or it will soon grow too big for any one woman to entertain.
2. Welcome everyone within the boundary, regardless of race, color or convictions.
3. Keep the dues low.
4. Limit the number of articles of food served.
5. Work out a fair assessment for each family to help pay for the refreshments.
6. Do not forget to do some charitable work. It will hold the interest in the club as well as bring benefit to others.—A Farm Woman.

How About These?

DID you ever try this kind of sausage loaf? To a pound of fresh sausage (without skin) add one egg, a small onion cut fine, a small potato diced. Mold into a loaf, pour over it two cups of hot water, and bake until browned. Thicken gravy before serving.

Or This One with Cottage Cheese?

Make a loaf of half a pound of sausage, one egg, a small onion cut fine and two cups cottage cheese. Add hot water and bake. Left-over macaroni or rice will change the flavor.

And Still Another

Does this sound as if you'd care to try it? We bought a quarter of beef this winter, forty pounds of which I canned, with enough liquid left over for three quarts of delicious soup stock. I don't know how many pounds we put away for dried beef, but I do know there were more roasting pieces than we could easily dispose of, yet that is how we best like beef.

However, there didn't seem to be anything to do but corn it. This week we felt that a piece of roast beef would be the "cat's whiskers," so we took a piece out of the brine and roasted it. The gravy was a trifle salty (would have been more so if the meat had been in the brine longer) but the meat was delicious, —better than fresh, we thought.—K. W. Hill

Milder Musterole for Small Children

Thousands of mothers tell us they would not be without *Children's Musterole,* the new and milder form of good old Musterole especially prepared for use on babies and small children.

In the dead of night, when they are awakened by the warning, croupy cough, they rub the clean, white ointment gently over the child's throat and chest and then go back to bed.

Children's Musterole, like regular Musterole, penetrates the skin with a warming tingle and goes quickly to the seat of the trouble.

It does not blister like the old-fashioned mustard plaster and it is not messy to apply.

Made from pure oil of mustard, it takes the kink out of stiff necks, makes sore throats well, stops croupy coughs and colds. In jars, 35c.

The Musterole Co., Cleveland, Ohio

CHILDREN'S MUSTEROLE WILL NOT BLISTER MILD BETTER THAN A MUSTARD PLASTER

Our Young People's Forum

Cousin Ruth's Letter

Dear Forum Friends:—I've just been reading some of your letters and I'm all puffed up with pride—your letters are getting more interesting all the time. Keep it up, everybody. I don't want to ever stop being proud of my big family.

Wasn't it fun to get a letter from a cousin in Florida? It would be fine to be down there now, that is, if you don't like skating and sledding and sleighing,—and who doesn't? I had the biggest surprise once when someone told me that lots and lots of people in the South never had Christmas trees. Why, I had always thought Christmas and Christmas trees just belonged together. In some places south of us the children celebrate Christmas with regular Fourth of July fireworks! Wouldn't that seem funny?

Speaking of celebrations, sitting in my wheel chair the other morning, all wrapped up like a precious gem boxed in cotton, I suddenly remembered that George Washington and Abraham Lincoln both had birthdays this month and that I hadn't once mentioned them in a letter to you. Here I'd been so busy trying to get well I'd forgotten my history. There is much that we might talk over concerning these two famous Americans, but just now I think I'd rather lean back and let your letters come in to me.

I expect some of you celebrated the two birthdays at school. I well remember that back in my geography and arithmetic days we used to have special programs when we spoke "pieces" and displayed the Washington and Lincoln booklets we'd made beforehand.

Now don't forget to write me—you don't want me to lean back waiting forever, do you?

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends: — We have been taking Pennsylvania Farmer for about three years and I always read the Forum page. But as there are very few letters from boys and girls of the Empire State I have decided to write one myself.

I am fourteen years old and am in the eighth grade and expect to graduate in June. I have a sister and brother and I am the youngest in the family. My sister is a very bright girl, the brightest in her class. Maybe it isn't nice to brag about sisters, but mine is a very extraordinary one.

I have three miles to go to school and in summer I ride a bicycle and in winter I ride in a car.

Here is a poem I composed about an extraordinary rooster whose name was Peter, tho I failed to mention it in the poem.

POOR PETER

Last spring I well remember
  There came from a far off town
A shipment of little chicks
  Each like a bit of thistledown.

They chirped and peeped as we opened the box,
  All as hungry as they could be
And when I held them in my hands
  Were not the least afraid of me.

They all were healthy babies
  Except one little one,
A sickly little fluffy ball
  Who wouldn't eat or run.

We put him in a box all by himself
  Till he grew well once more.
But I do declare we'd spoiled him
  As ne'er was chick before.

He was silly and foolish from that day ,
  A nervous spoiled child,
Jumping here and jumping there
  Never peaceful and mild.

He had to dine all alone
  Or he wouldn't eat a bit,
And insisted on being petted
  Till we grew tired of it.

But there came one fatal day
  To end his foolishness and pelf,
And one morning we found him dead.
  For, alas! he'd hung himself!
—Adah Boesen, Chemung Co., N. Y.

Dear Cousin Ruth and Form Readers:—I have been a reader of the Young People's Forum for a long time and have grown interested so I decided to write a letter and become a member.

I have lived in Pine City for nearly three years and I like it better than the city. I go to Southport Graded School and I'm in the eighth grade. I am fourteen years old. We did not have any school Friday for the snow was so deep that the roads were covered with deep snow. I have been trying to make a snow house but the snow blew around too much.

I do not think it has been good skating around here but it has been good riding down hill.

I am going to be a teacher when I grow up and my sister always says, "I pity the next generation." Maybe she will have a reason for it.—Maybelle Boesen, Chemung County, N. Y.

The answer to the riddle published last week is
O-H I-O
Milly Calvert,
Lycoming County, Pa.

Dear Cousin Ruth and Forum Friends:—May I join your circle? We have been taking Pennsylvania Farmer for a long time. I like the Forum page best of all. I didn't see many letters from York County so I thought I would like to write.

I am eight years old and have no brothers or sisters. I live on a farm two and one-half miles from town. We have horses, cows, pigs and chickens. For pets I have three Bantams and two Maltese kittens. You ought to see them play. I go to Gerbrichs School and we have thirty-one scholars in our school.

I like to go to school. We have lots of fun throwing snow balls. We have lots of snow. I like to go coasting. It is real cold and yesterday morning the temperature was nine below zero. — Russel Cornblower, York County, Pa.

MRS. BOB WHITE,
Helen Mendla, Bucks County, Pa.

Dear Cousin Ruth and Forum Friends:—I always enjoy the letters on the Forum page. I like to hear from all the girls and boys from all over, and I am sure every other girl and boy does, too.

I live on a farm and my father has a tea room on the state highway. I like to clerk in it in the summer.

I have a cat and two dogs. The dogs' names are Peg and Cotton. I don't know which I like the best. Cotton is a little white curley poodle. She sure is pretty, and she can do many tricks. Every morning she comes to wake me; if I am asleep she will pull my hair and scratch me until I get awake.

My sister and I do all of the barn work to help papa. I have about two miles to go to school. I am twelve years old and am in the eighth grade.

I wonder how many of you boys and girls have twin sisters or brothers? I have a twin sister and brother. They are five years old. I have one sister that teaches school in New Jersey and one brother that goes to college. I suppose all of you have fun coasting. I am sure I do. I sure do love the winter time with such fine sports.

My sister and I play the piano. We both took lessons. Well, I hope all the boys and girls of Columbia County will write.—Mary Sharretts, Columbia County, Pa.

Dear Cousin Ruth and Forum Friends:—I have not seen any letters from Washington County so I thought I would write. I am eleven years old. I have over two miles to go to school. I have no brothers or sisters.

I live on a farm and have for pets a dog and cat; the dog's name is Roudy Boy and the cat's name is Snip.

We raise chickens and geese. I raised twenty-one geese last summer. We go to the M. E. Church. With love to Cousin Ruth and Forum Friends.—Hattie Carter, Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading "Our Young People's Forum" for a long time but have never got right down to writing to you.

I am twelve years old and am in the eighth grade. We take our final examinations some time in May. We are going to have a bazaar.

On our farm we have dogs, cats, cows and horses. One of the horses is named Nellie and the other Trix. I ride Trix after the mail about every night; she is very useful to me.—Phene Killam, Pike County, Pa.

Dear Cousin Ruth and Forum Friends:—I have only seen one letter, I think, from Chester County. Why, boys and girls, we can not forget our dear Chester County. I've been a read of Pennsylvania Farmer for many years and I enjoy reading your letters each week, which are very interesting these cold evenings.

I walk about a quarter of a mile to school. I am twelve years old and I am in the sixth grade. I live on a large farm so we are kept busy. I have one pet, a big cat, which I call Tom. This is my first letter and if some of the Forum friends would be kind enough to tell me how to join I would thank them very much. I will write again if I may. Good luck to all.—Sara Gable, Chester County, Pa.

You have become a member of the Forum by writing this letter. It is not hard to join, you see.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I am a girl nine years old and live on farm of 125 acres. I go to Shehowken to school. I am in the fourth grade. For pets I have a dog and cat.

I think my papa has always taken Pennsylvania Farmer. I cannot remember when we did not get it. I like the letters from the boys and girls very much. I have one sister and three brothers.—Leonore Campbell, Wayne County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—You can find the answer to this question which has so often been asked if you will cut out the white pieces you see in the black space and paste them together so that they form a circle. When you have found the answer, send it to me on a POSTAL CARD not later than March 8. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the February 7 issue of Pennsylvania Farmer is: MOUTH TEETH FOOT HEAD ARM EAR TOE HAIR NOSE NECK HAND LEG FINGER TONGUE EYE.

The prize winners are: Mabel Carpenter, age 9, Guys Mills, Pa.; Kenneth Challender, age 8, New Egypt, N. J.; Leroy Deremer, age 9, Townville, Pa.; Robert W. Fink, age 8, Manchester, Pa.; Edith Hall, age 8, Mill Run, Pa.; Edna Keiser, age 10, Smithfield, Pa.; Clifford Kriner, age 7, Orwigsburg, Pa.; Kathryn Manner, age 10, Ellicott City, Md.; Margaret Moore, age 7, Woodstown, N. J.; John Shaffer, age 8, Wolfsburg, Pa.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

I WENT about my chores. There was to be no more wavering in my conduct. At supper Mr. Hacket kept us laughing with songs and jests and stories. The boy John, having been reproved for rapid eating, hurled his spoon upon the floor.

"Those in favor of his punishment will please say aye?" said the schoolmaster.

I remember that we had a divided house on that important question.

The schoolmaster said: "Michael Henry wishes him to be forgiven on promise of better conduct, but for the next offense he shall ride the badger."

This meant lying for a painful moment across his father's knee.

The promise was given and our merry-making resumed. The district attorney, whom I had met before, came to see me after supper, and asked more questions and advised me to talk with no one about the shooting without his consent. Soon he went away, and after I had learned my lesson Mr. Hacket said:

"Let us walk up to the jail and spend a few minutes with Amos."

We hurried to the jail. The sheriff, a stout-built, stern-faced man, admitted us.

"Can we see the Grimshaw boy?" Mr. Hacket inquired.

"I guess so," he answered as he lazily rose from his chair and took down a bunch of large keys which had been hanging on the wall. "His father has just left."

He spoke in a low, solemn tone, which impressed me deeply as he put a lighted candle in the hand of the schoolmaster. He thrust a big key into the lock of a heavy iron grating and threw it open and bade us step in. We entered an ill-smelling, stone-floored room with a number of cells against its rear wall. He locked the door behind us. I saw a face and figure in the dim candle-light, behind the grated door of one of those cells. How lonely and dejected and helpless was the expression of that figure! The sheriff went to the door and unlocked it.

"Hello, Grimshaw," he said sternly. "Step out here."

It all went to my heart—the manners of the sheriff so like the cold iron of his keys and doors—the dim candle-light, the pale, frightened youth who walked toward us. We shook his hand and he said that he was glad to see us. I saw the scar under his left ear and reaching out upon his cheek which my stone had made and knew that he bore the mark of Cain.

He asked if he could see me alone and the sheriff shook his head and said sternly:

"Against the rules."

"Amos, I've a boy o' my own an' I feel for ye," said the schoolmaster. "I'm going to come here, now and then, to cheer ye up and bring ye some books to read. If there's any word of advice I can give ye—let me know. Have ye a lawyer?"

"There's one coming tomorrow."

"Don't say a word about the case, boy, to any one but your lawyer—mind that."

We left him and went to our home and beds. I to spend half the night thinking of my discovery, since which, for some reason, I had no doubt of the guilt of Amos, but I spoke not of it to any one and the secret worried me.

Next morning on my way to school I passed a scene more strange and memorable than any in my long experience. I saw the shabby figure of old Benjamin Grimshaw walking in the side path. His hands were in his pockets, his eyes bent upon the ground, his lips moving as if he were in deep thought. Roving Kate, the ragged, silent woman who, for the fortune of Amos, had drawn a gibbet, the shadow of which was now upon him, walked slowly behind the money-lender, pointing at him with her bony forefinger. She did not notice me. Silently, her feet wrapped in rags, she walked behind the man, always pointing at him. It thrilled me, partly because I had begun to believe in the weird, mysterious power of the Silent Woman. I saw him stop and buy some crackers and an apple and a piece of cheese.

"Why does she follow him that way?" I asked the storekeeper when they were gone.

"Oh, I dunno, boy!" he answered. "She's crazy and I guess she dunno what she's doin'."

The explanation did not satisfy me. I knew, or thought I knew, better than he the meaning of that look in her eyes. I had seen it before.

I started for the big schoolhouse and a number of boys joined me with pleasant words.

"I saw you lookin' at ol' Kate," one of them said to me. "Don't ye ever make fun o' her. She's got the evil eye an' if she puts it on ye, why ye'll git drownded er fall off a high place er somethin'."

The boys were of one accord about that.

SALLY ran past us with that low-lived Wills boy, who carried her books. His father had gone into the grocery business and Henry wore boughten clothes. I couldn't tell Sally how mean he was. I was angry and decided not to speak to her until she spoke to me. I got along better in school, altho there was some tittering when I recited, probably because I had a broader dialect and bigger boots than the boys of the village.

The days went easier after that. The boys took me into their play and some of them were most friendly. I had a swift foot and a good eye, as well as a strong arm, and could hold my own at three-old-cat—a kind of baseball which we played in the school yard. Saturday came. As we were sitting down at the table that morning the younger children clung to the knees of Mr. Hacket and begged him to take them up the river in a boat.

"Good Lord! What wilt thou give me when I grow childless?" he exclaimed with his arms around them. "That was the question of Abraham, and it often comes to me. Of course we shall go. But hark! Let us hear what the green chair has to say."

There was a moment of silence and then he went on with a merry laugh. "Right ye are, Michael Henry! You are always right, my boy—God bless your soul! We shall take Bart with us an' doughnuts an' cheese an' cookies an' dried meat for all."

FROM that moment I date the beginning of my love for the occupant of the green chair in the home of Mr. Hacket. Those good people were Catholics and I a Protestant and yet this Michael Henry always insisted upon the most delicate consideration for my faith and feelings.

"I promised to spend the morning in the field with Mr. Wright, if I may have your consent, sir," I said.

"Then we shall console ourselves, knowing that you are in better company," said Mr. Hacket.

Mr. Dunkelberg called at the house in Ashery Lane to see me after breakfast.

"Bart, if you will come with me I should like to order some store clothes and boots for you," he said in his squeaky voice.

For a moment I knew not how to answer him. Nettled as I had been by Sally's treatment of me, the offer was like rubbing ashes on the soreness of my spirit.

I blushed and surveyed my garments and said:

"I guess I look pretty badly, don't I?"

"You look all right, but I thought, maybe, you would feel better in softer raiment, especially if you care to go around much with the young people. I am an old friend of the family and I guess it would be proper for me to buy the clothes for you. When you are older you can buy a suit for me, some time, if you care to."

It should be understood that well-to-do people in the towns were more particular about their dress those days than now.

"I'll ask my aunt and uncle about it," I proposed.

"That's all right," he answered. "I'm going to drive up to your house this afternoon and your uncle wishes you to go with me. We are all to have a talk with Mr. Grimshaw."

He left me and I went over to Mr. Wright's.

They told me that he was cutting corn in the back lot, where I found him.

"How do I look in these clothes?" I bravely asked.

"Like the son of a farmer up in the hills and that's just as you ought to look," he answered.

In a moment he added as he reaped a hill of corn with his sickle:

"I suppose they are making fun of you, partner."

"Some," I answered, blushing.

"Don't mind that," he advised, and then quoted the stanza:

"Were I as tall to reach the pole
 Or grasp the ocean in a span,
I'd still me measured by my soul;
 The mind's the standard of the
  man."

"Mr. Dunkelberg came this morning and wanted to buy me some new clothes and boots," I said.

The Senator stopped work and stood looking at me with his hands upon his hips.

"I wouldn't let him do it if I were you," he said thoughtfully.

Just then I saw a young man come running toward us in the distant field.

Mr. Wright took out his compass.

"Look here," he said, "you see the needle points due north."

He took a lodestone out of his pocket and holding it near the compass moved it back and forth. The needle followed it.

The young man came up to us breathing deeply. Perspiration was rolling off his face. He was much excited and spoke with some difficulty.

"Senator Wright," he gasped, "Mrs. Wright sent me down to tell you that President Van Buren is at the house."

I remember vividly the look of mild amusement in the Senator's face and the serene calmness with which he looked at the young man and said to him:

"Tell Mrs. Wright to make him comfortable in our easy chair and to say to the President that I shall be up directly."

TO MY utter surprise he resumed his talk with me as the young man went away.

"You see all ways are north when you put this lodestone near the needle," he went on. "If it is to tell you the truth you must keep the lodestone away from the needle. It's that way, too, with the compass of your soul, partner. There the lodestone is selfishness, and with its help you can make any direction look right to you and soon—you're lost."

He put his hand on my arm and said in a low tone which made me to understand that it was for my ear only.

"What I fear is that they may try to tamper with your compass. Look out for lodestones."

He was near the end of a row and went on with his reaping as he said:

"I could take my body off this row any minute, but the only way to get my mind off it is to go to its end."

He found the last bundle and then we walked together toward the house, the Senator carrying his sickle.

"I shall introduce you to the President," he said as we neared our destination. "Then perhaps you had better leave us."

At home we had read much about the new President and regarded him with deep veneration. In general I knew the grounds of it—his fight against the banks for using public funds for selfish purposes and "swapping muskrats for mink" with the government, as uncle put it, by seeking to return the same in cheapened paper money; his long battle for the extension of the right of suffrage in our State; his fiery eloquence in debate. Often I had heard Uncle Peabody say that Van Buren had made it possible for a poor man to vote in York State and hold up his head like a man. So I was deeply moved by the prospect of seeing him.

I could not remember that I had ever been "introduced" to anybody. I knew that people put their wits on [illegible] and often flung down a "[illegible]" by way of demonstrating their [illegible] for the honor, when they were introduced in books. I remember asking rather timidly:

"What shall I say when—when you introduce me?"

"Oh, say anything that you want to say," he answered with a look of amusement.

"I'm kind o' scared," I said.

"You needn't be—he was once a poor boy just like you."

"Just like me!" I repeated, thoughtfully, for while I had heard a good deal of that kind of thing in our home, it had not, somehow, got under my jacket, as they used to say.

"Just like you—cowhide and all—the son of a small freeholder in Kinderhook on the Hudson," he went on. "But he was well fed in brain and body and kept his heart clean. So, of course, he grew and is still growing. That's a curious thing about men and women, Bart. If they are in good ground and properly cared for they never stop growing—never!—and that's a pretty full word—isn't it?"

I felt its fulness, but the Senator had a way of stopping just this side of the grave in all his talks with me, and so there was no sign of preaching in any of it.

"As time goes on you'll meet a good many great men, I presume," he continued. "They're all just human beings like you and me. Most of them enjoy beefsteak and apple pie and good boys."

We had come in sight of the house. I lagged behind a little when I saw the great man sitting on the small piazza with Mrs. Wright. I shall never forget the grand clothes he wore—black, saving the gray waistcoat, with shiny, brass buttons—especially the great, white standing collar and cravat. I see vividly, too, as I write, the full figure, the ruddy, kindly face, the large nose, the gray eyes, the thick halo of silvered hair extending from his collar to the bald top of his head. He rose and said in a deep voice:

"He sows ill luck who hinders the reaper."

Mr. Wright hung his sickle on a small tree in the dooryard and answered.

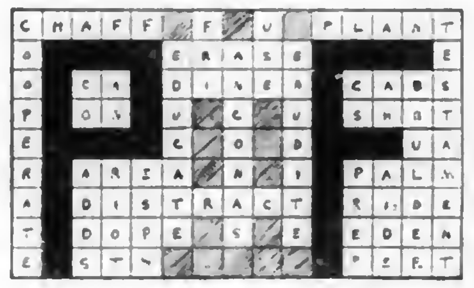
LAST WEEK'S PUZZLE ANSWER



Gum-Dipped BALLOONS

Will Double the Value of Your Car—

Now you can make your car work all winter and spring—regardless of road and weather! Just equip with Firestone full-size balloons. Thousands of busy farmers now ride on these big low-pressure tires—without worry about the road ahead. They are built flexible and strong by Firestone Gum-Dipping and will give you a new idea of comfort—smooth the ruts—absorb vibration and make driving trouble-free.

What's more, you'll find them the most economical tires you ever used.

Let a Firestone dealer make the changeover for you. Prices are reasonable, and he will give you liberal allowance on your old tires.

Firestone

The Standard of Low Pressure Cords

CENTAUR TRACTOR

For Greater Profits—*Horse Power Instead of Horse Flesh!*

THE CENTAUR—*a powerful steel "horse"*—untiring—ever ready—furnishes abundant power when and where you need it. Gives the complete satisfaction of handling all field work quickly—economically—and with little effort. Replaces the work of horses with *sure, dependable, low-cost power!*

For plowing, harrowing, seeding and cultivating the CENTAUR TRACTOR has no equal. It never tires, never loses time—but is "on the job" ready for action every minute of the day. It is light weight, strong, easily handled—***and costs only 10 cents an hour to operate.***

A RIDING TRACTOR FOR EVERY JOB!

The CENTAUR operator *rides on every job*—including plowing. This sturdy tractor has reverse gears and backs under its own power. Short and compact, it turns easily. Automatic governor regulates motor speed without throttle adjustment. Hyatt Roller Bearings and Air Cooled "New Way" Motor. Five years in the field has proven its thorough dependability.

Write today—or mail the coupon—for the complete story of what this truly wonderful farm power unit will do for you.

Yes! this is it –
The liquid floor covering that everyone is talking about – applied with a brush
Easiest to clean – Resists hardest wear

for any floor: WOOD OR CEMENT INSIDE OR OUTSIDE

KOVERFLOR is entirely different from anything you have ever used.

It beautifies and protects all floors, creating a fresh, wholesome surface—tile-like in appearance—which is easily cleaned with a mop. It resists the most rugged wear and tear and is impervious to water, weather, oil and grease.

It prevents the elements of decay from attacking the flooring material. If your cement floors dust, Koverflor will stop it. It will also enhance their beauty and add to their value.

Koverflor is supplied in solid colors for any floor—wood or cement—inside or outside, Ideal for the porch. Also for cellars, garages, factories, stores, industrial and commercial buildings, steamships, yachts, boats, etc. Particularly effective for old floors.

Economical. Easily applied with a brush—just like paint. Hardware and paint dealers sell it. If unable to obtain it conveniently, we will supply it direct.

For practical booklet on Koverflor, clip the coupon.

Horticultural Meetings

(Continued from page 11)

Pittston, a number of the growers catering to the Wilkesbarre market are about to co-operate by adopting a uniform brand, agreeing upon uniform grades (Pennsylvania standard) and packages, and requesting frequent inspection of their products by the inspector of the State Bureau of Markets stationed at Wilkesbarre.

Some Gentle Sarcasm

"Of course," he said, "it is only a little country show, and in a coal region, too, and we could not expect to have one as large or as attractive as the state fruit show at Harrisburg; but we usually have about 400 plates of apples, 225 bushel baskets of apples, and an attendance of about fifteen thousand."

The full measure of this gentle sarcasm is felt only when we know that the state fruit show at Harrisburg this year was scarcely half as large as the "little show" in Wilkesbarre, and, if the truth is told (for I saw both myself) not anywhere near as attractive to the visiting public. This is a good-natured prod which the rest of the state would do well to heed.

Report on Apple Week

The report of the Apple Week Committee showed that the Association has distributed 1400 of the colored apple posters to members and 10,000 of the sixteen-page apple recipe books. This material went to nineteen counties. It is planned to continue and extend this work the coming year under the direction of a new committee on advertising.

National Apple Week, heretofore exploited mainly by the International Apple Shippers' Association, is now in the hands of National Apple Week, Inc., an organiaztion of shippers and growers, for their mutual interest. W. L. Minnich, of Chambersburg, is a Director. Members contribute $20 a year to a nation-wide advertising campaign to increase the consumption of apples.

Resolutions Adopted

Resolutions were adopted calling for variety certification in Pennsylvania; commending L. M. Marble, of Canton, for his noteworthy investigations of common storage problems; requesting a state census of orchards; expressing dissatisfaction with the policy of the State Highway Department in paying such high wages that adjacent horticulturists cannot compete with them; and calling attention to present deficiencies in state laws with reference to the incorporation and conduct of co-operative purchasing and marketing associations.

A motion that the Association affiliate with other agricultural organizations, with a view to co-operative buying and selling by the Association, was laid on the table, it being the judgment of the majority that the Association should remain strictly educational in scope, leaving co-operative movements to agencies organized for that specific purpose, on a commodity basis, and mainly local.

Fruit Show Small

The fruit show was a disappointment; the quality was good, but the quantity was not. It is hard to understand why such outstanding fruit counties like Adams, Franklin, York and Berks were not represented by county exhibits. The Chester-Delaware Society captured first premium in the county class, with Luzerne a close second. The latter county had a more attractive display, but it lacked uniformity through the package.

Allegheny and Lancaster had creditable exhibits.

The display of horticultural implements and supplies was unusually good, and the dealers seemed to be pretty cheerful at the end of the week, which is a good sign that the buying power of Pennsylvania fruit growers is still high. There is no better gauge of the condition of the industry than that.

Alaska—90° in the Shade

MANY people are surprised to learn that tropical daytime temperatures are recorded in Alaska every summer, and that there are parts of the territory, notably in the Aleutian Islands and along the southern coast, where zero readings have never been observed.

While the climate of Alaska presents great contrasts and in some sections is quite rigorous at times, it is healthful and invigorating. The economic development that has already taken place in the territory has been achieved largely thru the aid of climatic conditions, rather than in spite of them. For example, the overland transportation of supplies, machinery, etc., for mining and other development work, would be impossible in a climate with winter temperatures above freezing, without the building of expensive roads and bridges.

Long Days Make Crops Grow Quickly

As an illustration of the possibilities of agriculture in some of the interior valleys, it may be said that in the Fairbanks district, where spring wheat, oats, potatoes, and other vegetables, and small fruits are successfully grown, there has been only one serious crop failure in the nineteen years since farming was begun in that district. At Juneau, with a January mean of twenty-seven degrees F. and a July mean of fifty-seven degrees F. there is an average of only 108 days a year with freezing temperatures, and at Sitka only 106, as against 186 days at Bismarck and 109 at Chicago. The summer temperatures of the interior are pleasant, and under the effect of prolonged daylight vegetation makes rapid growth. In the Tanana and Upper Yukon Valleys temperatures in excess of ninety degrees F. are occasionally recorded.—Weather Bureau, U. S. D. A.

Old Institute Reports

THE Pennsylvania Department of Agriculture announces that it has copies of reports of Farmers' Institutes and proceedings of the State Board of Agriculture dating back to 1903, and that it is interested in getting copies of these historical publications into the hands of all interested parties. The reports referred to were issued annually from 1903 to 1918. As long as the supply lasts, these will be distributed to all persons making a request. Request should be addressed to the Editor, Pennsylvania Department of Agriculture, Harrisburg.

Jakie—Ikey, you should put the curtains down when you kiss your wife. I saw you last night.

Ikey—The joke's on you, Jakie. I wasn't home last night.

Flash—Can I sell you an encyclopaedia?

Light—No, I couldn't ride the thing if I had it.

FREE
This Valuable Farm Account Book and Catalog of —
SuperZinc-ed WIRE FENCES

Super-Zinced Fences are armored against rust by the heaviest coating of zinc that can be successfully applied to wire. By our improved process the zinc is so closely bonded to special-formula steel wire that it will not crack or peel.

You now get Super-Zinced rust protection in both *Columbia Hinge-Joint and Pittsburgh Perfect Stiff-Stay Fences*, made in standard farm and poultry styles, and in our superb and distinctive lawn fences. They are sold by a dealer near you.

Send for our catalog giving full information about these long-life fences; we also send you a valuable vest-pocket book containing pages for farm accounts, live stock and crop records, seeding information, etc., both sent *free*.

Sheep and Lambs—Receipts, 590 head; market steady; sheep, $3@7.50; culls, $2.50@3.50; lambs, $9@18; culls, $9@10.

Hogs—Receipts, 790 head; market steady; light to medium weights, $10@11; pigs, $9.25@10; heavy hogs, $11@11.75; roughs, $9.50@10.25.

HAY AND GRAIN

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $26@27; No 2, $24@25; No 3, $21@23; sample, $18@22. Straw, large bales, rye, $19; oat, $15.

Grain—RYE, easy; No 2 western, 1.64¾ f o b N Y and 1.63 c i f, export. WHEAT, spot easy; No 1 dark northern spring, c i f New York, lake and rail, $2.14¾; No 2 hard winter, f o b, lake and rail, $1.97¾; No 2 mixed durum, do, $1.99¾; No 1 North Manitoba, do, in bond, $2.13. CORN, spot easy; No 2 yellow, c i f track New York, all rail, $1.40¼; No 2 mixed, do, $1.39¾. OATS, spot barely steady; No 2 white, 62½c.

BALTIMORE PRODUCE

Butter — Creamery, fancy, 42½c; do, choice, 41@41½c; do, good, 39@40c; prints, 42½@44½c; blocks, 41½@43½c; do, ladles, 27@29c; Maryland and Penna, rolls, 20@25c; Maryland, Virginia and Pennsylvania, dairy prints, 20@25c; process butter, 33c.

Eggs—On the Baltimore Butter and Egg Exchange nearby fresh gathered firsts, 34@34½c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 28@29c; do, mediums, 3½@4 lbs, smooth, 25@27c; do, smaller or rough and poor, 23@24c; Leghorns, 24@25c; old roosters, 17@18c; young, large, smooth, 32c; capons, 7 lbs and under, 38c. Ducks, young Pekins, 4 lbs and over, fat, 32c; do, puddles, 30c; do, Muscovy and mongrels, 28c; do, smaller and poorer, 24@25c. Geese, nearby, 24@25c. Pigeons, pair, 35@40c. Guinea fowl, young, 1½ lbs and over, each, 75@85c; do, small, each, 40@50c. Turkeys, choice hens, 8 lbs and over, 45c; do, gobblers, 40c; do, old toms, 35c; do, poor and crooked breast, 25c.

CHICAGO LIVESTOCK MARKET

Cattle—Receipts, 500 head; compared with week ago fed steers, yearlings and better grades fat cows mostly 50@75c higher; heifers mostly 50c higher; light kind in liberal supply at close; canners and cutters strong to 25c higher; veal calves closing 50c lower; stockers and feeders strong to 25c higher. Bulk prices follow: Beef steers, $8.35@10.40; fat cows, $4.50@6.25; heifers, $6.25@8.25; canners and cutters, $2.90@3.65; veal calves, $11.50@13.50; feeder steers, $6.25@7.50.

Hogs—Bulk good and choice 180@350 lb butchers, $11.40@11.75; top, $11.75, paid by all interest; bulk, 140@160-lb weight, $10.85@11.20; packing sows, largely $10.40@10.60; strong weight pigs, largely, $10@10.50; estimated holdover, 3000 head. heavy weight hogs, $11.40@11.75, slaughter pigs, $9.25@10.50.

Sheep—Fat wooled lambs, $16.75@17.50; week's top, $17.90; Colorados, mostly $17@17.75; fresh shorn lambs, $14@14.50; yearlings, $14.50@15.50; fat ewes, $8.50@9; top, $9.25; wethers, $10.50@12; two-year olds, $12.50; desirable feeding lambs, $16.50@17.25; week's top, $17.50; closing top $17.

WOOL MARKET

Boston, February 20 1925.

Domestic: Ohio and Penna fleeces delaine unwashed, 65@66c; half-blood combing, 63@64c; three-eighths-blood combing 68@69c; Michigan and New York fleeces delaine, unwashed, 63@64c; half-blood unwashed, 62@63c; three-eighths-blood combing 67@68c; quarter-blood unwashed, 66c; fine unwashed 57@58c; Wisconsin, Missouri and average New England, half-blood, 64@65c; three-eighths blood, 66@67c; quarter blood, 66c.

FEED PRICES

The quotations below are for transit and nearby shipments, Thursday, February 19, 1925, according to the Pennsylvania Bureau of Markets, the New Jersey Bureau of Markets and the United States Bureau of Agricultural Economics co-operating. The figures show the approximate cost of feed per ton (all in 100-lb sacks) in carlots, sight draft basis, delivered on track at Philadelphia and Scranton.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton for Freehold, Toms River, [illegible] points, add $1.40 per ton.

Pure spring bran	[illegible]
Coarse spring bran	[illegible]

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, February [illegible]

Cloverseed, cash, old, new and February, $18.10; March, $18 asked; [illegible] asked. Alsike, cash, old $12.75; new and February, $12.85; March, $12.95. Timothy seed, cash and February, $3; March $3.05.

County News and Comment

Adams County, Pa.—The weather has been warm for the past week and most of the snow is gone. There being no frost in the ground much of the moisture went into the soil, which will be beneficial for next season's crops. Wheat and grass looking very well. Roads in fair condition. Not as many stock and implement sales this year as usual. Price for good stuff is satisfactory. Livestock wintered well. Wheat was up to $2.12 but there was very little for sale. Prices: wheat, $1.83; corn, $1.50; oats, 60c; milk, four per cent, $2.30; butter, 40c; eggs, 37c.—A. R., Feb. 17.

Armstrong County, Pa.—There has been some apprehension about the outcome of the big snow's effect on the grain and young clover. A thaw began a few days ago. Today, the tenth, the ice is going out of the Allegheny River. We have had alternate freezing and thawing. When a full uncovering was made it was found the grain and clover were in excellent condition, coming out green and unhurt. All roads, except occasional drifted sections, have been excellent for two months. The severity of the weather has made necessary liberal feeding and the boasted hay abundance of last fall is disappearing very rapidly. All surplus wheat has been sold and many corn cribs are showing a lean appearance. Some farmers made such full use of the sledding as to put in two years' supply of coal. Hens laying liberally with consequent sharp declines in prices, best strictly fresh only 40c dozen. Butter, likewise, has declined sharply in price. Beef and pork prices have also shown a sluggish tendency. The sharp advance in fertilizers, all grades, has caused farmers to use on spring crops only sparingly. The outlook now is that areas planted in all spring crops will be below normal. Seed corn, of good quality, in heavy demand. Most potatoes sold, generally for $1.00 bu. All apples cleaned up. Not much planting in orcahrd trees will be done this spring. Coal mines operating generally on an approximate forty per cent full run. Clover seed will not be seeded so liberally as usual on account of high price of seed. Spring crop pigs will be very light. It looks as the demand for farm help will be very light this season. Many industrial laborers are idle. No farm sales advertised but a general lethargic spirit dominates agricultural outlook.—W. M. P., Feb. 10.

Blair County, Pa.—The wheat and grass look green and healthy where ground is bare of snow. There was less trouble from high waters than usual when there is so much snow on the ground; the Juniata River overflowed its banks near Williamsburg. The eclipse of the moon on the evening of February 8 was not seen by many as it only covered a small portion of the moon's surface. Rather mild weather this month so far; only a cold day now and then; much fog causing many wrecks. The robins and bluebirds appeared recently. Farmers are preparing for the spring work. Eggs, 40c and plentiful; butter, 50c; apples, $1.50.—H. E. H., February 19.

Carbon County, Pa.—Since the last report we had another heavy fall of snow, about twenty-four inches, covering the fields. Mild weather set in about a week ago and the snow is melting away very fast. Creeks are swollen and the ice is about all gone. Several cars of potatoes were loaded last week, the first cars at 50@52c per bu., the last car at 60c; farmers are getting $1 per bu. on the market. Butchering about all done and farmers preparing for spring work, pruning trees and repairing machinery. Butter 50c; eggs, 60c; country sausage, 30c; pudding, 25c; scrapple, 10c; apples, $1.75 per bu.—L. E. B., Feb. 11.

Carroll County, Md.—The weather has been disagreeable the past week. Rain fell and was followed by a dense fog. It has been years since we have experienced such dense fog for so long a duration. Snow and ice left rapidly, causing high waters, the streams overflowing their banks. Automobile travel was dangerous and difficult, it being necessary to burn the headlights during the day for safety. The weather helped to remove the ice rapidly from the wheat fields. Wheat looking well considering the poor condition the crop was in when winter season began. The length of time that snow completely covered fields served to protect wheat and grass. Very little work outside of chores accomplished during past month. Dirt roads in good condition when snow fell, good traveling all winter for both sleighs and automobiles except when roads were drifted. T. B. testing main conversational topic of milk shippers to Baltimore City since testing became compulsory. Red clover seed of known origin scarce and high, farmers who have seed asking $19@22 per bushel. Prices of products are: corn, $6@7 per 350 lbs.; wheat, $1.82 bu.; potatoes, $1 bu.; eggs, 34c; also production for county is way below normal, not enough eggs produced to pay feed bills.—H. I. R., Feb. 16.

Clinton County, Pa.—February 2 dawned dark and dreary and remained that way all day so that Mr. Groundhog was not able to see his shadow. Ice and snow about all melted and the streams filled with water. There will be less farm sales this spring than last. Some wheat sold at $2.10, but many farmers are holding for higher price; present price $1.98. Corn and oats will be fed on farms. Some hay for sale, but mostly timothy with demand for clover hay predominating. Very little clover seed for sale by farmers. Eggs selling at 40@50c; butter, 45c; fat cattle and hogs all sold.—W. C. W., Feb. 17.

Fayette County, Pa.—Winter weather has slackened up a bit. Some of the farmers have started to plow, but it is a little early yet. Some of the wheat in this county does not look very good. Had some hard freezes this winter with no snow to protect it. Plenty of sickness in the county, some schools are closed on account of it. Market prices vary some. Hay, $25; corn, $1.70; wheat, $2; eggs, 70c; butter, 60c. Mill feeds are very high in price. Public works still continue to be idle. Farm census takers are having a time of it on account of bad roads and also so few farmers keep accounts or records of their work. Farmers very much discouraged. A large number of sales going on, and some farmers are quiting and selling out.—E. H. V., Feb. 17.

Frederick County, Md.—Weather warm the first part of this month following a month of extreme cold and snow. The snow saved the wheat from freezing as bad as it would if there had been no snow. Two corn shows and one community show were held in this county last month, both well attended. Due to the poor yield of corn and poorer quality last year, emphasis is being laid on the necessity of carefully picking and testing seed corn for the coming season. The work of testing dairy cattle for tuberculosis is on in earnest in Frederick County and it is to be hoped that before long it will be free of this dreaded disease. Eggs remaining unusually high this year but have made quite a drop in the last two weeks. Corn high and being shipped in from the West.—R. J. W., Feb. 14.

Lackawanna County, Pa.—January was a changeful month, continued cold, cloudy, snow until eighteenth and nineteenth and then clear and cold until the twenty-fourth. The eclipse of the sun was viewed by thousands of people. There was a sudden chill in the air and the temperature dropped four degrees during that time. The snow-covered hills and country took on a green-yellowish hue and a deep twilight settled down. The planets, Venus, Jupiter and Mars, were plainly visible. Thursday the twenty-ninth all records for January were broken for a quarter of a century. A blizzard raged all day and night and continued well into the next day. High wind carried and piled huge drifts, so that all kinds of traffic were cut off. Rural mail carriers were unable to reach patrons for days at a time. February warmer, rain and much foggy weather. The Farm Bureau held their annual meeting on February 4, at Clarks Summit, under the supervision of L. E. White, Farm Bureau agent. Miss Ruth Patrick, having recently been assigned for home economics extension work, held a separate meeting for the women. There was an excellent program in the afternoon. On February 12 Lackawanna County Pomona met with Newton Grange in Newton. John H. Light, the state lecturer, was the speaker of the day and was given a royal welcome. The high school pupils gave a patriotic entertainment in the evening.—E. A. K., Feb. 17.

Lancaster County, Pa.—After six weeks of sleighing, warm rains melted the snow, and vehicles on wheels were again used. The damp weather was long looked for by the tobacco growers, as they are anxious to get the crop stripped and out of the way in case we have an early spring. No tobacco sales have been reported lately, and only a very few sold their crop in this county. Wheat fields do not look very well, especially the ones that were late seeded. Eggs becoming plentiful and are now 40@42c. Calves also have dropped in price to 12c lb. live weight. Chickens remain about the same price, as no one cares to sell many now when they are laying. Feeds are advancing in price. —R. C. R., Feb. 19.

Lebanon County, Pa.—Some ice houses on dairy farms were filled with ice that measured twenty-two inches in thickness. Our coldest day was in January when eighteen below was registered. Since groundhog day we have had spring weather and rains. This resulted in very high water. Low lands were flooded and bridges were damaged. From January second to February twelfth not a wagon or a single automobile passed our place. During this time, the old block sleighs which appear to be indestructible, two-horse bobs and one-horse sleighs were all resurrected and used. Our big hatcheries are getting busy again. Rocks, Reds, Brahmas and other heavy breeds are being incubated to be followed by the lighter stocks. Our county agent received $125 from the authorities of our great Farm Products Show at Harrisburg which he will distribute to our county's winners. During the rainy weather of the past ten days our tobacco people made good progress with stripping. Some froze before it could cure. January, February and March are our public sales' months.—R. I. W., Feb. 16.

Lehigh County, Pa.—Since January 2 the country is blanketed by a deep snow. Sleighing was excellent for about a month. Farmers took to market immense quantities of potatoes and wheat. The young folks enjoyed themselves by organizing sleighing parties. On February 10 and 11 there was rain and heavy fog, causing the snow to melt and the water to rise in the streams. Very little damage done by flood as it soon turned colder and the water subsided. More young farmers selling out than ever before. Some farms will remain tenantless and others will again be worked in part by the owners. Farmers much elated over $2 wheat and most of them disposed of their surplus. Potatoes quite active, too, selling at shipping points for 60@65c bu. Eggs, 40c; butter, 40c; corn, $1.45; wheat, $1.90; rye, $1.25; hogs, butchered, 15c.—O. J. R., February 13.

Mifflin County, Pa.—Winter seems to be broken; weather mostly fair with warm days and cool nights. A few warm rains which raised the streams and the river. The ice went without any damage, leaving the shores and fields piled full, as is usually the case. We had a lot of heavy fog the last week, a few times lasting all day. Some farmers hauled out their wheat the last few weeks for which they received $2 a bushel. Not much to do but chores as the frost is leaving the ground which makes the fields too soft to haul manure and the roads hard to travel. Market quotations: wheat, $1.90; corn, $1.20; oats, 65c; potatoes, 75c; apples, $1; butter, 50c; eggs, 40c; lard, 18c. —J. H. B., Feb. 16.

Warren County, N. J.—The February thaw arrived on the ninth and by the twelfth nearly all the snow had melted and the ice had passed down the old Delaware and disappeared, doing scarcely any damage. Still quite warm and an early spring seems assured. A goodly number of farmers quitting this spring and public auctions are scheduled for nearly every day until April 1. Sales quite well attended and good prices are being realized. Good farm chunks, $150; cows, $75; pigs, about 20c; hens, $1.50 each; corn stalks, 7½@10c bundle; timothy hay, $22; baled hay, alfalfa, $25@30. Feed prices remain about the same with wheat $2; oats, 65c; rye, $1.20; corn is $40 ton and the farmers are hauling it in. Potatoes are doing a little better, selling for 80c bu. in car lots. Apples, $1.50 bu. and scarce. Eggs plentiful and selling at 44c doz.—A. S. P., Feb. 16.

Wayne County, Pa.—Mr. H. E. Clepper, the district forester of Scranton, and Mr. Taber, of the State Department of Forestry, held a very interesting and well attended movie show in the Prompton Presbyterian Church, Friday night. Pictures included the forest and every day things, out of date and up to date methods of forest fire prevention, and a two-reel feature film entitled, "Out of the Shadows," being a picture giving the consequences of tuberculosis in farm dairy herds, and methods for its control. County Agent Wakeley was present and talked on tuberculin testing of dairy cattle. Game Protector Murray made a very interesting statement that the forest fires were more destructive to game and wild life than any number of hunters could possibly be. He also offered free food so that farmers might feed the rabbits that otherwise might injure their fruit trees. Starrucca and Sterling are signed up for testing under the modified accredited area plan for eradication of tuberculosis. Nearly 600 farmers of the county have signed up under this plan to date.—E. B. C., Feb. 16.

Tobacco Marketing

BUYING started with a rush this week when nearly all the big manufacturing concerns put their representatives in the field. The appearance of these buyers was the signal for independents to commence operations, and buying has been done in practically every section of the county.

The prices range from thirteen to sixteen cents, but the bulk of the leaf has brought fourteen and fifteen cents, with fillers being sold at from two to three and one-half cents per pound. Many growers have been steadily refusing to sell their crops at these figures, and state that they will hold their leaf and pack it themselves rather than sell at prices which they declare are unfair.

The General Cigar Company, Bayup Cigars, Inc., P. Lorillard, and Long and Taylor have been the heaviest buyers so far. The most recent reports on the movement of the 1924 crop come from the Manor section where it is said the General Cigar Company bought about 120 acres on their first day's driving. Independent packers in the section about Landisville have also been very active, along with the majority of the Lancaster independents.

Packers state that the very unfavorable weather has prevented a sooner movement of the crop, and that the 1924 leaf will be bought up very quickly. Bayuk's and Lorillard's started receiving last week, and the long-awaited delivery of the new crop has started.

The comparatively low prices of this year's crop have greatly stimulated activity among the several co-operative packing plants which have been in operation in the county. Outstanding among these organizations is the one at Donerville. A meeting held by this group of growers last week disclosed the fact that nearly all the former members will pack their crop again this year, and that new members are coming in, making an additional warehouse necessary.—Garden Spot Farmer.

Tuning up for the Spring Work

Minutes Spent Now May Save Hours Later

THE old saying that an ounce of prevention is worth a pound of cure is certainly applicable to power farming machinery. The tightening of a nut or bolt will usually prevent a serious delay which would occur later on if the part were allowed to remain loose.

A general overhauling of the farm tractor should include a good cleaning of the engine. The cylinder head should be removed and the carbon thoroly cleaned out. This can be burned out in a shop equipped for the work, but on the farm the usual method is scraping. A narrow putty knife or a stout screwdriver, or a regular bearing scraper, will make excellent tools for this work. Spark plugs should be removed and carbon deposits cleaned from them also.

Bearing Should Be Tight

Valve springs should be taken out, dipped in a can of kerosene and wiped clean. The valves should then be carefully ground to a good seat, for on them depends to a large extent good compression.

The next thing in order would be a testing and adjustment of the main and connecting rod bearings. Any knocking or rattling that may have been noticed when the tractor was in operation might easily be caused by loose bearings.

A thin shim or two taken out of the joint and the bearing bolts again drawn up snug should suffice for adjustment, but considerable care is necessary in securing a perfectly fitting bearing. After the bearings are adjusted do not be alarmed if the motor turns over with some difficulty. Of course, it should not bind to such an extent that it cannot be cranked, but it can be pretty stiff and still not too stiff.

Look Over the Cooling System

The first time the engine is run after any bearings have been adjusted be sure that there is plenty of clean oil in the crank case and that the engine is operated slowly for short intervals until the bearings wear in properly. It is not a wise plan to put the tractor at any heavy work until the engine has been limbered up a bit after such adjustments have been made.

It is important that the cooling system be carefully checked. The radiator should be drained and cleaned. A solution of lye and water will answer very well for taking the dirt and accumulated grease out of the radiator, but the entire cooling system should be well rinsed with clean water after such a treatment.

A mighty good tractor accessory is some kind of a heat recording device in the radiator cap. The working temperature should be kept as near 180 degrees as is possible. If this temperature varies to any great extent, one can look to a clogged radiator, a loose fan belt or a faulty pump for the cause. Every tractor operator should have a spare fan belt on hand.

The Furrow Wheel Needs Watching

After the engine and all of its parts have received attention, the wheels should be gone over. It would be well to remove the front wheels, take out the anti-friction bearings and clean them well in gasoline or kerosene. After wiping them with a clean rag they should be well smeared with a good grade of grease and replaced and drawn up snugly at the same time. A front wheel with a loose roller or ball-bearing will soon be ruined, especially if it should be the wheel which runs in the furrow. It is always a good plan to inspect the furrow wheel of any tractor after the day's run in the field.

The cannon bearings or outer bearings of the rear axle should be well supplied with fresh grease. Some tractors are now equipped with pressure lubricating devices which enable the operator to force the lubrication to the most remote portion of the bearing.—Frank A. Meckel.

Does Tile Draining Pay?

I have seventy-one acres near the Ohio line in Crawford County, Pennsylvania. It is fairly fertile and will raise fair crops in a dry year, but in a wet year I can't get the crops in until too late. I was told it would pay to borrow money at six per cent and drain the swales and wet places but, as I am a poor man and no longer young, I don't like to throw away hard earned money on something that I am not sure will benefit me. I have been told by tile manufacturers that the most expensive system of tiling would pay for itself in three years. I would like to have some advice now from someone other than the manufacturer.—J. H., Crawford County, Pa.

I have no way of knowing the value of the land which you contemplate draining. It may be true that some land is not worth draining but I doubt if this is the case with your land.

Much depends upon the use to which you intend putting the land after it has been tiled. If you are going to crop it to some good paying crop you will find that tiling will pay for itself in a remarkably short time.

I have known of cases where corn land had to be replanted several times in a wet season, but after it was tiled, it was never necessary to replant. The saving in time and labor alone in such an instance would soon pay for the expense of tiling to say nothing of the bigger yield in corn.

Saved Replanting Corn

My suggestion to you would be to have your country agricultural agent go over the field carefully with you and then get the honest opinion of one of the members of the Agricultural Engineering Department at the Pennsylvania State College. If your land is even fair, tile drainage will probably be a good investment. Certainly it should increase the value of the land somewhat.—Frank A. Meckel.

A perverse temper and fretful disposition will, wherever they prevail, render any state of life whatsoever unhappy.—Cicero.

The easiest thing to lose—and perhaps the costliest—is one's temper. He who practices courtesy and imparts cheerfulness adds to the wealth of the world.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW CAUGHT COLD.—We bought a cow on December first. She had been fresh some three weeks, was low in flesh, but seemingly healthy. Her owner stated that he had fed damaged clover hay to her and she failed to eat enough of it. Soon after we got her she commenced to cough, rattle some in throat or head but looks bright and has good appetite.—H. O. H., Salisbury, Md. Give her equal parts muriate of ammonia, powdered gentian, in feed three times a day—a dessert spoonful of each is right dose for cow. Her food should be of good quality.

ECZEMA.—I have a calf six months old that has skin trouble which causes him to scratch considerably. I have been feeding him plenty skimmed milk and hay.—N. A. M., Aberdeen, Md. Apply one part lysol mixed with fifty parts water to itchy parts once or twice a day. Give calf a dessert spoonful of baking soda in feed twice a day.

PARTIAL LOSS OF POWER.—I bought a good cow twelve months ago. She is eight years old and gets up like a horse. It is not unusual for her to sit like a dog, taking two or three minutes to get up on hind legs; she is with calf, due to come fresh next May. I am afraid she might slip her calf, and she is likely to have milk fever, as she had a former attack.—A. L. H., Sligo, Pa. Give her thirty drops of fluid extract of nux vomica and a teaspoonful of acetate of potash in feed or in drinking water two or three times a day. Her bowels should be kept open. Apply mustard and water to back twice a week.

BREEDING QUESTION.—I have a large female rabbit hound six years old, which has been a regular breeder of fine pups; they were saleable. Last year she came in heat, strayed away, was served by a collie, and had pups which I destroyed. I would like to know if I breed her again to a hound dog if she will have good pups like she formerly had.—J. B., Vineland, N. J. She is most likely to have pups which resemble the sire and herself; however, in exceptional cases one or more of the pups may show a point or two resembling the collie breed, but go right along and breed her as usual. The traditional belief is that it ruins a bitch to have such an accident happen, but I don't believe it.

Fewer Sheep on Feed

THERE was a decrease of about 163,000 head, or nearly four per cent, in the number of sheep and lambs on feed January 1, 1925, from the number January 1, 1924, in the Corn Belt and western states, according to the estimate of the United States Department of Agriculture. The estimated numbers were 4,081,000 this year and 4,245,000 last.

When breeding turkeys or geese it pays to avoid inbreeding as this seems to undermine the vitality of the stock. Try to obtain the toms and ganders from flocks owned by distant breeders so they will surely be unrelated to the birds in the home flock.

There are no low occupations, only low workmen.—Atlantic Monthly.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

The Light in the Clearing

(Continued from page 25)

"The plowman has overtaken the reaper, Mr. President. I bid you welcome to my humble home."

"It is a pleasure to be here and a regret to call you back to Washington," said the President as they shook hands.

"I suppose that means an extra session," the Senator answered.

"First let me reassure you. I shall get away as soon as possible, for I know that a President is a heavy burden for one to have on his hands."

"Don't worry. I can get along with almost any kind of a human being, especially if he likes pudding and milk as well as you do," said the Senator, who then introduced me in these words:

"Mr. President, this is my young friend Barton Baynes of the neighborhood of Lickitysplit in the town of Ballybeen—a coming man of this county."

"Come on," was the playful remark of the President as he took my hand. "I shall be looking for you."

I had carefully chosen my words and I remember saying, with some dignity, like one in a story book, altho with a trembling voice:

"It is an honor to meet you, sir, and thank you for the right to vote—when I am old enough."

Vividly, too, I remember his gentle smile as he looked down at me and said in a mostly kindly tone:

"I think it a great honor to hear you say that."

He put his hands upon my shoulders and turning to the Senator said:

"Wright, I often wish that I had your modesty."

"I need it much more than you do," the Senator laughed.

Straightway I left them with an awkward bow and blushing to the roots of my hair. A number of boys and girls stood under the shade trees opposite looking across at the President. In my embarrassment I did not identify any one in the group. Numbers of men and women were passing the house and, as they did so, taking "a good look," in their way of speaking at the two great men. Not before had I seen so many people walking about—many in their best clothes.

As I neared the home of Mr. Hacket I heard hurrying footsteps behind me and the voice of Sally calling my name. I stopped and faced about.

How charming she looked as she walked toward me! I had never seen her quite so fixed up.

"Bart," she said. "I suppose you're not going to speak to me."

"If you'll speak to me," I answered.

"I love to speak to you," she said. "I've seen looking all around for you. Mother wants you to come over to dinner with us at just twelve o'clock. You're going away with father as soon as we get through."

I wanted to go but got the notion all at once that the Dunkelbergs were in need of information about me and that the time had come to impart it. So then and there, that ancient Olympus of our family received notice as it were.

"I can't," I said. "I've got to study my lessons before I go away with your father."

It was a blow to her. I saw the shadow that fell upon her face. She was vexed and turned and ran away from me without another word, and I felt a pang of regret as I went to the lonely and deserted home of the schoolmaster.

(To be continued next week)

Let *World-Flight* dependability help you build farm profits

A fact which links a familiar farm sight with this great American aviation achievement

THE MEN who planned the record-breaking World-Flight of the U. S. Army aviators knew the importance of correct lubrication.

With danger lurking in every mile, with new obstacles to be overcome daily, with unexpected conditions developing hourly, the first and foremost requirement was dependability.

Only with correct lubrication could smooth, powerful, *safe* operation be assured.

Every farmer will be interested to know that the Army engineers who selected the oil to meet this supreme test, selected the very oil which today lubricates thousands of farm tractors. They specified Gargoyle Mobiloil "B", the identical oil which so many farmers use daily to assure the most economical operation of their tractors.

During the warm weather months when your tractor must work without interruption, this same Gargoyle Mobiloil "B" gives most economical lubrication to the Avery, the Holt, the Oil Pull and many other makes of tractors, while Mobiloil "BB", which is an oil of exactly the same high quality and character, but a little lighter in body, means profitable operation to the Fordson, the Cletrac, the Wallis and others.

* * *

Airplane engines and tractor engines work constantly under full capacity. They perform heavy-duty, heat-developing service, and the use of unsuitable oil is sure to result in premature breakdowns and wasteful fuel and oil consumption.

To use the grade of Mobiloil recommended for your tractor, your car or your truck, is to secure the same dependability of engin performance that was demanded in the history-making feats of the United States Army Fliers.

Near your farm there is a dealer who will be glad to tell you exactly which grades of Mobiloil are best suited to your work. On his walls, he has the Gargoyle Mobiloil Chart of Recommendations which specifies the correct grade of Mobiloil for every make and model of motor.

CAMBRIA FENCE

A Style of Fence for Every Need

CAMBRIA FENCE is made in a number of styles and sizes so that every user can select field fence to suit his requirements.

Each kind of CAMBRIA FENCE is built to meet a uniform standard of high quality. The best material for the purpose is used—strong, springy, clean steel wire, carefully selected, full gage and heavily galvanized.

CAMBRIA FENCE is of the ***hinge joint,*** cut-stay type, with a special tension curve that insures tautness. It is strong, durable, and dependable.

CAMBRIA FENCE is a Bethlehem product—with Bethlehem quality. Every step in its manufacture, from mining the ore to shipping the finished roll of fence, is controlled by one organization. Uniform construction, uniform quality and uniform long life to each kind of Cambria Fence are thereby assured.

Ask your dealer for CAMBRIA FENCE

Other Bethlehem Wire Products include: Barbed Wire; Barbless Twisted Wire; Plain Wire; Galvanized Wire; Fence Staples; Wire Nails; Bale Ties.

Lessons from Western Farmers

They Can Teach Us Much about Labor Saving

MANY a farmer becomes disgusted with farming and quits because he has not enough help. So he gets a tenant to farm on shares. This tenant usually has more help and it is expected he can do the work.

The tenant naturally works to his personal interest. He tries to get the most out of the farm in the shortest time. He has no interest in the permanency of the farm. The result is the soil is robbed, the buildings are neglected, and the farm decreases in value. The owner who farmed it quit farming because he thought he could not get along anymore and was dissatisfied, and is still dissatisfied.

The New Radio Set

THE scene pictured on the first page of this issue is a common one these days when a radio receiving set is considered almost a necessity in many country homes. Nearly everyone who owns a radio set has had some unique experiences with it that would be of interest to other farm radio fans if properly described. You are invited to write us about your radio set so that we can can help you share your most interesting experiences with other readers. Address your letter to the Editorial Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

Now, my advice is that you change your method of farming and stay on your farm, improve it and enjoy it.

Western Ways Save Labor

The trouble with most farmers is they think they must raise the same old crops in the same old way. This is absurd.

Now, for instance, in raising corn why not do it in western style? It is easy and practical. For years I have done it. See what we gain. We used to cut the corn and put it on shocks. That's work and lots of it. Then we pulled down the shocks and husked out the corn, tied the fodder in bundles, set it up in shocks again. Later we hauled it home, stacked it around the barn and cut it; put it in the feed rack, then, as manure, put it out on a manure pile and later hauled it back where it came from.

Now we save all that labor and plow it under where it grew. See the amount of labor we save! In our case we grow potatoes and by turning under all the corn stalks we increase our yield from fifty to one hundred per cent.

But, some will say, we need it for feed. We say, keep less stock to save yourself labor.

Just Right for Alfalfa

I have in mind a farm of 100 acres. Here they raise wheat, corn, oats, hay and some potatoes; have a dairy of about ten cows and make butter, raise some pigs, have a flock of about 100 to 200 hens, and do the work the same way our fathers did it. These people will leave the farm because of too much work and I do not blame them for saying "too much work."

This particular farm is a sandy loam farm and ideal for alfalfa growing. Now, why not put most of this farm in alfalfa and make a specialty of raising pigs on alfalfa pasture! If our western farmers can do it and make money we can do it better because we are closer to the market.

Why should we continue to ra such crops as wheat and oats if w lose money at it? Even if you hav to buy straw for bedding, hauling baled straw is easy.

I think we can learn a lot fro our western farmers. Usually whe one man is on a farm in the West three or four are on a farm of the same size in the East.

Farming can be made a pleasu instead of a drudgery. Nowadays farmer can have all the city venlences on the farm, and eve more,—electricity, running wat bath, telephone, good roads, autom biles, and the radio.—C. R. Basho Berks County, Pa.

His Specialties—Potatoes and Cows

The Story of the Potter County Farmer Back of Erway Rural Russet Potatoes

By C. L. WHITE, Associate Editor

MOST Pennsylvania potato growers are familiar with the name Erway, thru their knowledge of the Erway Strain Rural Russet seed potatoes. However, if they are as uninformed as we were until last fall, it isn't likely that they can tell whether Erway is the name of a county, a man or a seed firm which had something to do with the development of this particular strain of seed.

Erway is the name of a farmer, just an ordinary "dirt" farmer, but one who is considered one of the best and most successful in Potter County, Pennsylvania.

Altho L. S. Erway has had a valuable strain of seed potatoes named for him, we want to tell about him as a general farmer, not primarily as a potato specialist. Potato growing is one of the two main branches of his farm operations; the other is dairying.

It was late in October when we drove north from Coudersport toward the Erway farm with County Agent Bert Straw. Potato digging had been finished on most farms along the way and many growers were preparing to haul to Coudersport the potatoes which had passed the inspection of the State Bureau of Plant Industry men. There they were to be stored as certified seed in the big storage house of the Potter Co-operative Potato Association.

Started Farming as a Renter

We found Mr. Erway in the act of assembling crates preparatory to hauling and storing his potatoes. In piles around the barn floor were the parts which go to make up the crates,—bottom slats of chestnut, corner posts of elm, and side slats of beach, cherry or maple. Many crates had been put together, but many pounds of nails remained to be driven before there would be containers enough for the whole crop.

Mr. Erway broke into the business of farming by renting a farm. But he didn't remain a renter long. At the end of five years he bought the farm he had rented, and it has been "The Erway Place" for the last twenty-two years.

The instinct for good farming methods which has made Mr. Erway one of the leaders in his county was responsible for his getting some purebred cattle early in his career. His attitude toward purebreds was enlightening and amusing.

Purebreds?—Of Course

We asked him when he purchased his first purebreds. He replied that he bought his first purebred Holstein heifer eighteen years ago. Others were acquired from time to time, he told us, but he said nothing about purebred sires.

He seems to have worked backward on his breeding program, we thought, as he continued to tell about his purebred females, with never a word about the herd sire.

"But you have a purebred bull, haven't you," [illegible] finally.

"Oh," he replied, "we always kept a purebred bull."

From the way he said it we knew that he would think it as foolish to try to make a "go" of dairying without a good purebred sire as it would be to drive a flivver without oil in the crank case, or to try to solve cross word puzzles without a dictionary.

There were about fifty head of cattle on the farm when we were there, tho Mr. Erway usually plans to milk about twenty-five cows during the winter. He is a member of the Dairymen's League and a pooler.

The big dairy barn which houses the herd and the hay and grain is comparatively new. Two barns, and the whole supply of fodder, except the corn, were lost by fire in 1918. The new barn is well equipped for dairying. There are two large silos at one end. The floors, of course, are of concrete and the stalls of steel. Overhead the stable is ceiled to keep out dust from the barn floor and hay mows above.

The herd is fed a ration consisting of clover hay, silage, and a ready mixed dairy feed.

Was One of First to Test for Tuberculosis

Mr. Erway took as a matter of course his testing for tuberculosis. He forgot to mention the fact that his is a federal accredited herd until Mr. Straw reminded him of the fact.

The Erway farm contains 288 acres, of which about 140 are under cultivation. The field work is done by four horses and a tractor.

We asked Mr. Erway what he thought of the tractor.

"It is the best thing in the world for plowing, dragging and digging potatoes," was his reply.

The rotation usually followed in potatoes-corn-oats-hay. A half ton of lime to the acre is applied with nearly every seeding of clover.

Several years ago Mr. Erway started growing Rural Russet potatoes from seed which was originally distributed thru the farm bureau. Each year the field was carefully rogued, all plants showing signs of disease being removed and destroyed. This field work against disease was done, for the most part, by County Agent Straw and G. F. Miles, extension plant pathologist of the Pennsylvania State College.

The home on the Erway farm, Potter County, Pennsylvania.

The careful attention given the crop immediately began to show results. Every year there was an increase in yield per acre over the previous year. The seed was distributed to other farmers of the county and they had similar experiences with it. The Erway strain, which was thus developed thru many years of painstaking attention to disease resistance and yield began a name for itself.

Doesn't Depend Entirely on Good Seed

In 1922 Mr. Erway grew 2000 bushels on six acres. This year, under less favorable conditions, Mr. Erway's average yield was 200 bushels, and his total crop 4000 bushels.

Good seed and good cultural methods usually go together and this case is no exception. Mr. Erway didn't rely entirely on his good seed for big crops. He knew with good seed he could afford to use the best fertilizers and spray materials.

County Agent Straw (left) and Mr. L. S. Erway.

As we stated above, he follows a corn-oats-hay-potato rotation. When he has enough manure to go around he applies in addition from 600 to 1000 pounds of a 2-8-10 fertilizer mixture. It is put on by means of a fertilizer attachment on the planter. When he doesn't have enough manure he uses about the same amount of a 4-8-4 mixture.

Mr. Erway's work on his own farm hasn't prevented him from taking an active part in the life of his community. His affiliation with farm organizations includes membership on the executive committee of the Potter County Farm Bureau and on the board of directors of the Pennsylvania Farmers Co-operative Federation.

Were Always There and on Time

The four sons and two daughters of the Erway family have made some notable attendance records in the local district school. Altho Mr. Erway believes in hiring as little help as possible the children were never kept out of school during rush times on the farm. They received more certificates for never being late or absent than any other children in the district.

Now one of the sons, Preston, is married and lives in the farm home, Mr. Erway having moved to town. But altho he lives in town he "commutes" back to the farm almost every day.

The people who make a business of studying the successes and failures of men and women say that few people get very far unless they have a definite plan for guiding their activities. In other words, men as well as ships don't reach their port unless they lay out a course and follow it.

We thought of this bit of philosophy while we were talking with Mr. Erway. He believes in laying out a good program and sticking to it. His career shows that he has carried out this belief. When he started farming he started to grow potatoes and to milk cows. But he wasn't satisfied with his first crop of potatoes nor with his original herd of cows. So he laid out his course of potato and dairy improvement, and stuck to it.

PLANT STOKES SEEDS
for The Very Best Vegetables

By concentrating our entire effort on vegetable seed problems, we have developed certain seed stocks which should have a place in every gardening operation. Don't fail to give Stokes Seeds a trial this year. You will quickly see the difference. No planter should be satisfied with his seed unless it is the best obtainable.

Our policies include:
1. Simplified variety list—emphasizing only the very best stocks.
2. Germination tests printed on every package.
3. Chemical treatment of all seed for the eradication of surface-borne disease.
4. Orders filled the same day as received.

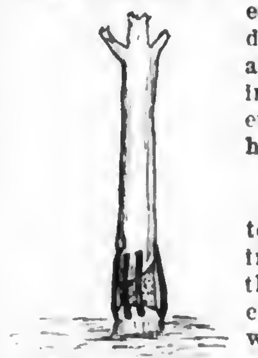
OUR FARM
Where an Editor Works and Thinks

THE number of letters and telephone calls received the last few days asking if anything can be done for young trees that have been girdled by rabbits would indicate that extensive damage has been done during the past winter. I have seen a number of trees which seem to be ruined, some of them of good size. In fact, one tree four or five inches in diameter was completely girdled for a distance of eight or ten inches. This kind of damage is nearly always severe during winter weather such as we have had this year.



* * *

THE first thing to do for girdled trees is to cover the wound with clay or mud and wrap it securely with muslin or several thicknesses of paper. This will prevent the drying out of the trunk and what inner bark may remain. After the sap commences to flow, bridge grafting may be done. This work is not always successful, especially if the girdling is complete, or if it extends too far above the ground. The method of performing it is as follows: Cut a number of vigorous sprouts of last year's growth to use as "bridges." Make cuts thru the bark of the tree about two inches above and below the damknife. Next, cut the "bridges long enough so that they may be sprung to these incisions, having cut each end with a sloping cut so it will press against the inner bark. The incisions should then be well waxed to keep out the air and rain. The rough drawings presented herewith may aid in understanding these directions.

* * *

I HAVE never thought it paid to try to bridge-graft very young trees—that is, trees which have been set only one or two years. Time will be saved by setting new trees. But thrifty trees four to six years old are often successfully bridged over, especially if the injury extends only part way around. Bridge-grafting is not a sure remedy for all damage and a good proportion of failures must be expected. We were happy to find upon examination that only one tree, one that had not been wrapped, was injured on Our Farm.

* * *

WE ARE planning to put the new setting of strawberry plants between apple trees as that is the only available land that has been tilled the last two years. We are afraid to set them on sod land because of the grubs. The white grub is the most serious pest of the strawberry plant, and what they do is plenty. The apple trees are but two years old and we will have lots of room without planting close to the tree rows. We shall put five rows of plants in each thirty-three-foot space. That will leave eight feet on each side of the trees.

* * *

THE alfalfa and timothy sod should have been plowed last fall for the potatoes also, but it was not done. Fall plowing of sod is recommended to kill at least some of the grubs which may infest it. We planted our potatoes in the same kind of sod last year, and while the damage was not serious they did eat some of them.

* * *

THE corn raised last year has been sold at $1.46 per bushel. While the returns are not yet in we are confident that we made more clear profit on the corn than was made on the potatoes grown on a piece of equal size. However, last year's prices in both cases were unusual and should not be used as an argument for dropping potatoes and going heavily into corn raising.—R. P. K.

Hilda—How did you like your cruise abroad?

Jackie—all right, but I'd hate to live in Europe.

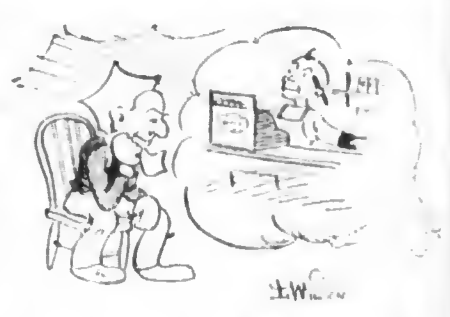
Hilda—Why, what's the matter?

Jackie—Oh, there are too many foreigners over there.

"How about some nice horseradish?" said the grocer to the bride.

"Oh, no, indeed! We keep an auto."—Stillson Zenith.

THE CHEERFUL PLOWMAN
The Other Fellow's Job



THE man behind the barrow with his jersey full of dirt may look with growing envy on the merchant's laundered shirt; but the man behind the counter feels the nagging of the trade and would swap his polished scissors for the farmer's rusty spade! In the night the drowsy doctor hears the clanging of the phone, and, "I wish I were a lawyer!" is his aggravated moan; but the lawyer, in his nightie, hears the doctor's car go past, and he says, "That lucky doctor must be makin money fast!"

The little boy in rompers thinks his daddy first in grac he wishes he were grown up with some whiskers on his face; but daddy feels the burden of the mortgage and the debts, and he wishes were Willy in his baby pantalettes!

The young man sees his sister with her money-spending bea says, "If I were sister I could save a pile of dough;" but the sister her brother with his volatile finance, and she longs to be the owne the derby and the pants!

Says the peasant in the cottage, "What a grand and happy thing to have a lofty station and the sceptre of the king;" but I have it whispered that the man upon the throne would rather be the peasa with a spirit of his own!

There are myriads of tonics for a fellow's mental flues when all with that contagion that is designated "blues," but when my grows irksome I can set my pulse athrob just by musing on the virtue the other fellow's job!—J. Edw. Tufft.

The Lesson of Lean Years

Lean years—such as those passing—often lead to long profits because of the lessons learned in cutting the cost corners.

Progressive farmers have found that good farm machinery, particularly the tractor, does more to reduce costs and increase yield than any other one thing.

With the Fordson they have found that they can not only do general tillage operations faster and better, but can use it for belt jobs and routine work of all kinds at a big saving in both time and effort.

So it is no wonder that farmers generally are facing an era of better prices with every confidence that the things they have learned in the lean years are going to lead to better profits in the better ones ahead of them.

Pooling Legislative Demands

AGAIN we wish to recommend to other states the very wise practice of New Jersey farmers in bringing all their agricultural forces together by having representatives from the different organizations meet for the purpose of uniting on desired legislation. This pooling of forces in a united demand for or against pending bills has a most salutary effect on legislators and is far more effective than a single organization can be, or, as is often the case, when different groups present opposing demands. No one organization can speak for all farmers, but where the Grange, farm bureau federation, agricultural college authorities, commodity organizations, etc., get together, they make an effective force. Egotism and jealousy are humanity's greatest deterrents to progress.

For Regulation of Fairs

WE BELIEVE the majority of the rural people of Pennsylvania favor the passage of House Bill No. 353 which would tend to eliminate the objectionable features now found at so many of the county fairs. The first section provides for an annual meeting of representatives of fairs with the secretary of agriculture for the purpose of consultation as to the wants, prospects and conditions of agriculture in the state, and directs that the secretary of agriculture shall provide rules and regulations for the conduct of such fair associations. Sections two and three provide that the state shall duplicate premium money paid for state-produced exhibits up to two thousand dollars, or four thousand dollars for counties in which more than one authorized fair is held. No association shall receive more than the sum paid by the association as premiums. No association shall be entitled to such benefits until two such exhibitions shall have been held.

Section six provides that any association which permits any immoral, lewd, obscene or indecent show or exhibition, or permits the use of any gambling device in which bets are laid, or any game of chance, shall forfeit its rights to any moneys it might be entitled to receive under this act. It makes it the duty of the president and secretary of the association to certify under oath that no such games or exhibitions were permitted.

If all who are interested in cleaning up the fairs of these objectionable features will write their senators and representatives asking them to vote for this measure we believe it can be passed, thus giving to the secretary of agriculture authority which he does not now possess in full.

Dairy Products Prices

IT IS estimated that dairy products will return to the farmers of the country one and one-half billion dollars in the year ending June 30, 1925. This sum is about four per cent less cash than in the previous year. While it is unfortunate that there should be a decline, yet it is not a large amount. Dairying is notable for its fairly steady cash returns. Even in the depression of 1921 dairy products were seventy-seven per cent above pre-war prices, while some agricultural products dropped to or below pre-war levels.

Dairy output has been increasing in the United States faster than population, but demand has expanded rapidly during the past few years. Since 1917 the production of milk has increased at least twenty per cent. The balance between production and consumption has been fairly well maintained until 1924 when foreign competition and abnormal domestic production destroyed that balance with the result that prices began to turn downward. It is time that dairy organizations and breeders of dairy cattle should begin to counsel against any further expansion at the present time.

The Pullman Surcharge

NEWSPAPERS are discussing pro and con the Congressional bill to abolish the surcharge on Pullman tickets. To explain it briefly, the situation is as follows: In taking a journey, you first buy a regular railroad ticket. If you wish to ride in a Pullman, you next go to the Pullman window and buy a Pullman ticket. The charge of the Pullman Company is so much, depending upon the distance you travel. In addition to the Pullman charge they add fifty per cent which goes to the railroad company hauling the Pullman coach. The railroad companies claim that the amount they receive for hauling the Pullman cars is not enough to meet the cost of hauling, and since a Pullman car does not hold as many people as a day coach it is necessary to collect this extra fifty per cent, the surcharge, in order to make any money.

The question for the common people to decide is: Should the railroad companies be compelled to discontinue collecting the fifty per cent surcharge on Pullman tickets and make up the loss by raising the price of regular fares for day coaches; or, should those who ride in Pullmans be compelled to continue paying what it costs to maintain the more "classy" service?

An Institute of Co-operation

THE leading farmers' organizations, both state and national, are co-operating in a movement to hold an institute for the study of the principles of co-operation. It will be known as the American Institute of Co-operation and will be conducted from July 20 to August 15 at the University of Pennsylvania in Philadelphia. The trustees of the Institute announce that speakers having an international reputation as authorities on practical co-operation will be secured to supplement American leaders in this work.

The move to start such an institute in this country was begun nearly two years ago by some of the leading organizations because of the recognized need for some means of unifying ideals and purposes in this country. Each of the four weeks will be devoted to specific phases of the subject. The tentative outline is as follows: First Week, Economic Principles of Co-operation; Second Week, Organization and Membership Problems; Third Week, Operating Methods and Management; Fourth Week, Sales Policies and Price Problems.

It is believed that the establishment of such a national institute will result in the development of leaders having similar information and ideals so that a national co-operative policy may be developed. It has been rather easy to build up such systems in the smaller countries of Europe, but the matter of effective co-operation is much more difficult in a country so big as the United States.

Day-old Chicks and Embargoes

IT IS unfortunate that the scare caused by the poultry embargoes should have occurred at the opening of the hatching and chick-shipping season. As is usually the case in such instances there is more smoke than fire. However, the authorities are to be commended for their prompt action in the matter which has evidently tended to stamp out the disease, or to keep it from spreading at least. It is thought that the situation is so well in hand that the embargo on shipments of adult fowls may soon be lifted.

As to day-old chicks, the regulations are simple and easy to meet. All that is required is the use of new or disinfected shipping containers. Buyers need have no fear of introducing the disease thru the purchase of chicks from reputable hatcheries. The Post Office Department has not recognized the question of embargoes at all and no regulations have been made concerning parcel post shipments. Farmers and others have become so accustomed to the replenishment of their flocks thru the purchase of day-old chicks that it would be a serious inconvenience if embargoes should prevent them from procuring their needed supply. We are glad the matter has been cleared up so satisfactorily.

Washington Letter

A PECULIAR SITUATION.—The attempt of Congress to enact legislation designed to put into law the recommendations of the President's agricultural conference has developed a peculiar situation. It was understood when the conference was first suggested that its recommendations to this Congress at least would be along lines of temporary farm relief to meet an emergency. The recommendations as finally given out were centered upon a bill creating a federal co-operative marketing board.

The strange thing about this proposition is that no one, not even members of the conference, claims that it is emergency legislation, or that it would provide immediate relief for agriculture.

OPINION DIVIDED.—The measure as finally drafted, known as the Capper-Haugen bill, is supported by several of the staunchest members of the congressional farm bloc, senators and congressmen who for years have been persistently fighting the farmers' battles in congress. It is opposed by other members of the farm bloc who pride themselves upon their loyalty to agriculture. Heads of three of the larger farm organizations favored the creating of a federal co-operative marketing board, while their Washington representatives were non-committal or openly in opposition.

MORE MONEY FOR EXPERI-ENT STATIONS.—The Purnell bill roviding larger appropriations for tate agricultural experiment sta-ions has passed both Houses of Con-ress, and is awaiting the Presi-ent's signature. The purpose of the ill is to provide for more thoro re-earch in marketing, home econom-s and rural life. Under the terms this bill each state experiment tation will receive $20,000 during he next fiscal year, with an in-rease of $10,000 yearly for four ears and a maximum of $60,000 a ear thereafter.

MORE FARM LOAN ASSOCIA-IONS.—On December 31, 1924, the otal number of active national farm an associations was 4643, showing net increase of fifty-three in the umber of associations for the year.

FEAR OLEO LEGISLATION.—overnors of several southern states re threatening dire punishment pon the western dairy states that re attempting to restrict by legis-tion the sale of oleomargarine. The ates in which they say legislation pending, that would put a pro-ibitory license on all oleomargarine anufactured and sold in imitation butter, are Wisconsin, California, laho, Missouri, Ohio, Oregon and tah.

The southern governors are wir-g their senators and congressmen use their influence with the sen-tors and representatives from the airy states in persuading their ate legislatures to defeat oleomar-rine legislation. These southern vernors are laboring under the lusion that oleomargarine is being ade largely of cottonseed oil. This not true according to A. M. oomis, secretary of the National airy Council. Most of the oleomar-rine produced today is made from coanut oil.—E. E. Reynolds.

Harrisburg Letter

THE APPROPRIATION SQUAB-LE.—The Legislature having decid- to play safe on the amount money to be appropriated from general funds for the coming o-year period is now engaged a series of differences with the ate Administration on how the mil-ons are to be divided. It has been long time since a legislature con-mplated appropriating less than a vernor thought should be voted d this unusual feature has the fur-er interest of an attempt to go be-nd the amount recommended for spitals. The old method of voting ate aid is to be retained and con-quently the Administration is ced with the job of fighting to pre-nt its departmental items from be-g sheared.

THE ALCOHOL BOARD.—One of e matters most discussed the last w days has been the refusal of the vernor to agree to a proposal onsored by responsible people to ke the headquarters of the alcohol ntrol of the permit office out of e Department of Agriculture. The vernor was bluntly informed a few ys ago the place for this regula-ry bureau was in the State Police partment.

MAY JUMP ITEMS.—There is a position among members of the mmittees in charge of appropria-ons to give the Department of Ag-ulture more money than the budg- recommends and to take from her departments what is wanted pay for some of its work. Similar- there is a movement under way turn the dog fund into a source cash to pay for cattle indemnities d pay only such expenses as are rectly involved with animal, poul- and similar industries out of this nd. The dog fund will amount to out a million in two years, per-ps more.

THE EMERGENCY FUND.—The ll of the State Grange for a $100,-00 fund to meet agricultural emer-encies, such as invasions of plant, imal or poultry diseases and pests, in hand and favorably considered legislators if not by the Adminis-ation. The idea is to have it avail-le for any such trouble as the Jap-ese beetle; the governor, auditor neral and state treasurer would ss upon requisitions made by the cretary of agriculture.

LOADING THE ROAD BILL.—The bill adding new road routes to the state system has been loaded to the guards. It is out in the Senate with over 1000 miles of new construction contemplated. The Administration is against this plan, insisting the present system should be finished first. Most of the roads which it was demanded should be added to the system last session have been included. The road bond bill is out of the woods, but the bill for more routes is going to complicate matters.—Hamilton, Harrisburg.

New Jersey Letter

POTATO PLANTING SURVEY.—Potato acreage in the early crop potato states which compete to a large extent with New Jersey growers, will be somewhat smaller in 1925 than last year, as shown by a survey among county agents from Maryland south thru the Carolinas, now being conducted by the New Jersey Federation of County Boards of Agriculture. The early crop of the Eastern Shore district of Virginia and Maryland will be slightly smaller, it appears, with acreage fifteen to eighteen per cent less than in 1924.

DEALERS' COMMITTEE FUNCTIONS.—The committee consisting of potato dealers in central New Jersey, an outgrowth of the work of the State Potato Improvement Committee last year, is endeavoring to secure dealer co-operation thruout the state on the matter of encouraging better grades and a better pack of New Jersey potatoes. The committee recently asked all potato dealers in the state to encourage growers to use United States standard potato grades wherever possible; to follow one and seven-eighth inch grading except on Giants; to refuse field run; and to give support in the employment of two federal-state inspectors besides the local inspectors at shipping points.

MANY DEER KILLED.—Final statistics on the 1924 deer season in New Jersey, made available by the State Board of Fish and Game Commissioners recently, shows that 1061 bucks were shot in 1924. This is less than the kill of the previous year. The report shows 419 bucks killed in Burlington County, 214 in Ocean, and 125 in Atlantic.

READY FOR SPRING HATCH.—The promise of an early spring has increased the activity of poultrymen in central and southern New Jersey to the point that hatching is already under way in many sections. Prominent poultrymen predict that 1925 will be a banner poultry season in New Jersey.

COUNTY AGENTS' CONFERENCE.—County Agents gathering at New Brunswick the first week of March are devoting at least one day to the consideration of marketing methods in New Jersey.—B.

New York Letter

SHEEP PROSPERITY.—A world-wide shortage in sheep, especially in the United States, together with a favorable dog law, is credited with the prosperity of sheep farmers of this state. Farmers who sold thru the pool in 1924 received an average price of 49.3 cents per pound. In 1920 the price was 32.2 cents, and considerably lower previous to that time.

REFERENDUM ON CHILD LABOR.—The farm bureaus have just completed a referendum on the proposed child labor amendment in thirteen counties. Of 2281 farmers voting 2017 were opposed. The women's organizations of the state are active in favoring the proposal.

HOLSTEIN MEN PROTEST GUERNSEY PRICE.—The Onondaga Milk Producers' Co-operative Association has decided to sell Guernsey milk at twenty cents a quart in Syracuse. The Holstein breeders this week warmly discussed and objected to the plan, seeing injury to their business in this price. The state Holstein breeders ask the co-operative to retail a special Holstein milk for babies at eighteen cents.—M. G. F.

HERE'S why—Our paint is a 100% quality product. The dealer who sells it knows what's what—in other words, he *recognizes* quality and value when he sees it. Isn't that the kind of a man you want to do business with?

No one ever saves any money buying cheap products and that's *particularly* true of paint. So stick to the Felton-Sibley Paints and know your money is well invested.

Double Strength Fertilizers—Reaching the Roots

FERTILIZER manufacturers are this year offering mixtures of high percentages of plant food, some of them double the amounts that growers have been accustomed to use. One large concern operating in the South is pushing a 6-18-6 mixture, for use on cotton and grain in place of the more familiar 3-9-3 mixture.

Farmers are advised to use just half as much of this new mixture as of the old, since it contains just twice as much plant food. Or better still, they are urged to use the same money's worth of the new as of the old; it is said that they will then be applying more units of plant food and may expect better yields, if other conditions are favorable.

Cuts the Freight Bill in Half

That sounds interesting, not only to southern farmers but to northerners who have occasion to use high grade mixtures in large quantities. If we use that double-rich mixture, we have only half as much weight to pay freight on and to haul from the freight house. Or, figuring another way, if we save money by having less weight to pay for, we can use more plant food for the same money that we paid for the lower grade mixtures. Either way we figure, the appearance of the new high grade mixtures ought to save money.

I suspect, however, that we shall have to be doubly careful with these richer mixtures to get a thoro distribution and mixing with the soil. Those who have seen wilting of plants or failure of germination when they have used large amounts of truck fertilizers can expect as much if not more trouble of this kind with the improved mixtures, even tho less of them is used.

Application Will Require Care

On the lighest sands especial care will have to be taken to insure a perfect mixing with the soil; in fact, I should prefer to keep that 6-18-6 mixture off the sandiest fields until I had more experience with it on the heavier soils.

Then, too, when growers have found it desirable to apply fertilizers ten days or more before planting seed or setting out plants, they must pay even more attention to this matter if they plan to use fertilizer mixtures of the highest analysis, because the latter are highly soluble and are likely to injure when in contact with plant roots on very light soil.

Plow Under or Top Dress?

Our canning crop of tomatoes, grown on heavy soil, will get some fertilizer under its roots by means of a light application before plowing. The best plan would be to disc the land as deeply as possible, broadcast the fertilizer, then plow. Another application of soluble fertilizer to the surface, worked in before setting the plants, will give them a quick start.

If the under soil were sandy or gravelly I would not think of following this plan, because much of the plowed-under fertilizer might be lost. It has often seemed to me, tho, that when we work all the fertilizer into the surface soil on silt and clay soils we encourage the plant roots to stay near the surface, where they suffer in dry times. On sandy soils the case is different, because much of the top-dressing washes downward only too quickly.—W. C. P.

Use for Old Crates

A dealer here has a lot of old cantaloupe crates saved from last year. He offers them for five cents apiece, second hand. I am thinking of using them in making new flats for plants. Are they worth this much for flat making or for any other purpose?—L. P. K., Montgomery County, Pa.

Sound crates with all the slats in place and reasonably free from knots and cracks are worth five cents for some purposes. We like them for handling light, bulky garden stuff like lettuce in the field, when it has to be repacked indoors. They can be used also in taking produce to market, but only for products of rather light weight. The slats are too far apart for onions or potatoes, and these are too heavy, anyway. You understand that I refer to standard sized crates, not those known as flats.

For the making of plant boxes these crates are suitable for emergency use but not for permanent work. The slats are usually made of poor grades of wood which do not resist decay. They are roughly sawn and not always of even width and thickness. We have used them sometimes in repairing old flats, for side pieces, when the depth was not greater than the width of these slats. Crates used for making plant boxes have their ends left over, these being of a size unsuited for plant boxes. The ends, then, are wasted. —W. C. P.

What Wilkes-Barre Ate

CARLOT receipts of fruits and vegetables in Wilkes-Barre increased from 3479 cars in 1923 to 4022 cars in 1924, according to a report of the Pennsylvania Bureau of Markets. This is in addition to liberal amounts of produce, largely apples, cabbage, potatoes, tomatoes and celery, which were grown locally and marketed thru wholesalers or direct to consumers.

Pennsylvania and New York supplied considerably more of the 731 cars of potatoes during 1924 than they did of the 734 cars in 1923, indicating a stronger tendency toward the use of potatoes of equal or better quality grown closer to the consumption center. In 1924 the New York and Pennsylvania receipts of potatoes were twenty-eight and eighteen per cent respectively of the 731 cars, while in 1923 only thirteen per cent of the 734 cars were New Yorks and fourteen per cent Pennsylvanias. On the other hand, Maine furnished 49 cars in 1923 and the area consisting of Michigan, Wisconsin and Minnesota shipped in 106 cars, while this past year the receipts dropped to one car from each of these sections.

The freight factor on potatoes shipped from the Maine and Michigan territories into Wilkes-Barre which in 1923 amounted to $35,[illegible] practically disappeared this past year, thereby creating an advantage in favor of potato producers closer to the city.

Pennsylvania's Contribution

Pennsylvania sections supplied Wilkes-Barre with a number of products in carlots consisting of nine cars of apples, eight cabbage, six grapes, eighteen peaches, one pears and [illegible] potatoes.

The receipts of fruits and vegetables in Wilkes-Barre in carload lots during 1924 were as follows: Apples, 157; bananas, 406; beans, 14; beets, 3; cabbage, 198; cantaloupes, [illegible]; carrots, 7; cauliflower, 1; celery, 35; chicory, 11; cranberries, 3; cucumbers, 110; grapefruit, 73; grapes, 454; kale, 1; lemons, 29; lettuce, 86; mixed produce, 254; onions, 162; oranges, 284; peaches, [illegible]; pears, 90; peas, 3; peppers, 11; pineapples, 15; plums and prunes, [illegible]; potatoes, 731; radishes, 2; spinach, 12; strawberries, 117; sweet potatoes, 64; tangerines, 3; tomatoes, 151; turnips and rutabagas, [illegible]; watermelons, 117. Total, 4022 cars.

Marketing Men Confer

CO-OPERATIVE marketing leaders and market officials from eastern states recently gathered at the call of the New Jeresy' State Bureau of Markets at Trenton, N. J., for a two-day conference.

One of the most important phases of the conference was the emphasis which the co-operative men placed upon carrying co-operation in marketing back to production. A number of the leaders stressed the importance of quality, standardization and packing as necessary adjuncts to co-operative selling. In the matter of pooling, emphasis was placed upon the necessity of a differential which would allow producers to be more exactly paid according to the quality and grade of their products.

Alexis L. Clark, Chief of the New Jersey State Bureau of Markets, as general chairman of the conference, called attention to the growing importance of co-operative marketing as a permanent factor in the sale of eastern products. Prof. Alva Agee, Secretary of the New Jersey State Department of Agriculture, welcomed the delegates.

Many Leaders Present

Among the important speakers were Oliver J. Sands, President of the American National Bank, Richmond, Va. and Financial Executive of the Virginia Tobacco Growers' Co-operative Association; Chris L. Christensen, Chief of the Federal Bureau of Agricultural Economics; Prof. Henry Keller, Jr., head of the Economics Department at the New Jersey State College; H. E. Babcock, General Manager of the New York Grange-League-Federation Exchange; M. C. Burritt, of the Federated Fruit and Vegetable Growers and the Western New York Fruit Growers' Co-operative Packing House Association; L. A. Cooley, Manager of the Atlantic Coast Poultry Producers' Association; H. E. Taylor, Executive Secretary of the New Jersey State Federation of County Board of Agriculture; J. A. Coulter, of the Dairymen's League; Joseph C. Barton, President of the Jersey Fruit Growers' Co-operative Association. —B.

Don't Let the Bees Loaf

THOUSANDS of dollars are lost annually to the beekeepers of Pennsylvania because so many hives are not adapted to the needs of the bees. Box hives and poorly made home made hives are not usually so constructed that a crop of honey can be had from them. Many beekeepers practice false economy by not having sufficient super room for storage and the bees are forced to idleness at the time that they should and would be gathering up a large crop of honey if the right amount of room were provided.—George H. Rea.

"Don't you smell something burning?"

"No; I don't think I do."

"I don't either; but most people do if you ask them."—Boston Transcript.

"Straight Rows of Sturdy Corn"

THINK what that means to you—when your crop is getting its growth. Straight, even rows of uniform heighth—with *every square foot of ground* bearing its sturdy plants. Superior planting means not only a bumper crop but much greater ease in cultivating—with time and labor saved.

Superior Corn Planter

is a "true-blue" Superior Planting Machine—built to do a hard job supremely well. Rugged strength, precise accuracy, and simplicity in construction are its underlying features. No springs or complicated parts. *No feed rod clutches to get out of order.* Row adjustments 28 inches to 48 inches—2 inch spacings. Double marker. Instantly adjusted for drilling.

Special plates can be furnished for planting beans, peas, peanuts, kaffir corn, beet seed, etc. Single Disc, or Runner Furrow Openers.

Buckeye Cultivators

Plant with Superior—and cultivate with Buckeye. It's the *direct route to better crops* and *bigger profits.* Buckeye cultivation means easier work and best possible results—*always.* These highest-quality implements are remarkable for simplicity of operation, lightness of draft, balance and flexibility. They are sturdily built of finest materials—to give long years of dependable service.

The Buckeye line includes both Riding and Walking Cultivators, One and Two-Row—and horse and tractor drawn machines. Write for the Buckeye facts in full.

Black Hawk Manure Spreader

A Manure Spreader of Superior quality. Scientifically designed and sturdily built. Has a strong and positive feed, doos not choke and is free from cog gearings. *Get the full fertilizing value of your manure* by using the New Black Hawk 40A. It thoroughly pulverizes and spreads manure widely and evenly in a great range of quantities. Lightest draft, simplest construction, easiest to operate. A Two-horse Spreader. Does a perfect job on hillsides and level ground. Write, or mail coupon for full details.

See the complete line of Superior Farm Implements at your dealers—or check and mail the coupon below for circular and full details.

For More and Better Tobacco

Experiment station tests in many states and our own experience show conclusively that tobacco fertilizer should carry 5% to 7% Nitrogen, about 8% Phosphoric Acid and from 3% to 5% Potash depending upon the nature of the soil. Such tests further show that all the Nitrogen may be inorganic as in

NITRATE OF SODA

Maryland College Station reports: "It will be seen that Nitrate of Soda has greatly increased the yield and value of the crop, whether applied alone or in conjunction with Acid Phosphate and Sulphate of Potash. The large increase in yield indicates that Nitrogen is the element most needed in these soils for the tobacco crop."

Virginia Experiment Station has also carried on a long series of experiments with much the same results. In Ohio a 12-year rotation experiment using 240 lbs. of Nitrate of Soda; 720 lbs. of Acid Phosphate and 180 lbs. of Muriate of Potash, showed the following average annual increases per acre: Tobacco, 790 lbs.; Wheat, 14.54 bushels; Hay, 1,736 lbs.

Bees—the Orchardist's Most Important Partners

By ELMER G. CARR Mercer County, N. J.

THE interest of fruit growers in proper pollination as a factor in the production of a profitable crop of tree fruits, especially apples and pears, is increasing.

Two factors are involved. One is the nature of the pollens of different varieties of fruits as to fertility or sterility, between trees of either the same or other varieties. The other is the supply of pollen carriers. It has been proved beyond a doubt by experiments in a number of states that the wind is not of appreciable value as a carrier of tree fruit pollens.

A study of pollens has done much to guide the present-day planter in providing trees having self-sterile pollen with neighbor trees having pollen not only self-fertile but fertile inter-se as well.

May Top-work Self Sterile Varieties

The relation of the different pollens one to the other has also enabled orchardists unfortunate enough to have a considerable area of self-sterile varieties to partially top-work a few trees of a fertile variety and thus provide enough pollen of the right sort to insure a profitable set of fruit.

In some cases this measure alone has been sufficient. This has been true in the smaller orchards. It has been especially true where the common practice of clean culture has not been followed and where the orchard has been adjacent to woods or fields affording a breeding place and harbor for pollen-bearing insects.

There are many orchards, however, in New Jersey particularly, where the plantings are large, running up into the hundreds of acres all in one area, where the accepted practice is clean culture between the trees. Here the wild pollen-bearers present are entirely inadequate to the task.

Other Insects Come Too Late

In cases of this character the orchardist has no choice, if he would be assured of a profitable set of fruit except to put honey bees in the orchard during blossoming time. Should weather conditions be such during the blossoming period as to prohibit insect flight, even this plan would fail. While such adverse conditions might occur, fortunately they seldom do.

Any pollen carrier other than honey bees would answer the same purpose were they numerous enough and if they could be controlled. Since, however, neither of these conditions can be assured, the hived bee is the only one which successfully can be used.

The wild pollen bearers even under the most favorable conditions are never numerous enough at the blossoming time of apples and pears to be adequate.

Many insects over-winter as a single individual,—the queen, and she is unable to raise much of a family by the time of the fruit blossoms. On the other hand, honey bees overwinter in considerable numbers, around thirty thousand to a hive, and multiply in early spring at a rapid rate so that each hive is able to send out thousands of workers at fruit blossoming time to assist the fruit grower.

Experiments in New Jersey and other states have shown that at apple blossoming time bees fly but a comparatively short distance from the hive. This shows the necessity, if good results are to be had, of spreading the hives thru the orchard.

Proper Spacing of Hives

Hutson's work in New Jersey shows that hives should be placed 100 to 200 yards apart to insure that the work of bees on the blossoms at the outer range of flight shall be ample.

When the trees are large, the groups probably should contain four or five colonies. In young orchards probably one or two colonies in a place will furnish enough bees if the hives are sufficiently populous.

The business of renting bees to orchardists during the blossoming period, from present indications, bids fair to assume considerable proportions in New Jersey. During 1924 one beekeeper so let out over three hundred colonies of bees and his orders up to January first are nearly four hundred for the coming season.

The cost to the orchardist for the rent of bees is about six dollars a colony.

Grange Officials Back U.S.D.A

THE Executive Committee of the National Grange transacted important business at its recent session held in Washington. In accordance with the resolution of the National Grange, it was voted to hold the 1925 session at Sacramento and it was also voted that delegates and visitors would go to Sacramento on a special Grange train starting at Boston, Mass., and returning in all probability by some southern route. The route and details of the special train will be worked out in accordance with the wishes of those desiring to attend so far as possible.

Report of the Committee

"The Grange in the past has vigorously opposed the effort to remove the Bureau of Economics, the Bureau of Forestry or the Bureau of Public Roads from the Department of Agriculture, and will continue to oppose any effort that will weaken the Department or interfere with its efficiency."

The Executive Committee of the Grange adopted the following resolution on the report of the President's Agricultural Conference:

"The Executive Committee of the National Grange in session at Washington after full consideration desire to express their approval of the general principles enumerated in the report of the President's Agricultural Conference.

"Since the establishment of the Department of Agriculture, the National Grange has looked with disfavor upon every movement or effort that has sought to interfere with its proper expansion and development.

KELLYS' Certified True to Name Fruit Trees

Send for 1925 Catalog

Its handsome illustrations picture the entire line of Kelly Brothers' Certified and Guaranteed True-to-Name Fruit Trees. Also Berry Bushes, Shrubs, and Ornamental Trees.

65,000 Fruit Trees Certified With Seal

65,000 of our large 1925 stock have been examined and certified True to Name by the Massachusetts Fruit Growers' Association. Each of these certified trees bears through one of it's limbs a lead seal put there by a representative of this Association. The seal states the true name of the fruit and STAYS on the tree until it bears True to Name fruit as guaranteed by us.

Buy Fruit Trees by Grade

NURSERY stock, like nearly every commercial commodity, has different grades. Fruit trees are usually graded according to the thickness of the trunk measured about an inch above the union of the bud or graft. One-year-old apple trees are graded mostly as to height, and a good A-grade apple tree may be from four and one-half to seven feet in height, depending upon the locality where grown.

Two-year-old apple trees generally run in three grades. The first grade is three-fourths of an inch in diameter; the second grade, one-half to five-eighths of an inch in thickness. Some nurseries include height along with girth. Peaches, plums, pears, cherries and quinces all have similar grades.

Root Stock from France

Most of the apple stocks used by nursery people are from crab seed imported from France. These may be purchased very reasonably and also come in four grades. The fruit grower wishing to do his own propagating should purchase only No. 1 branched root or No. 1 straight root stock.

Peach stocks are of two sources: pits from wild peaches growing in the moutains of the southern states or pits of cultivated varieties from canneries. The wild pits are hardier and usually germinate better.

In planting seedling trees, the tops and roots should be cut back to about six inches each and set deeply enough to have the crowns slightly below the surface.—R. S., Snyder, State College extension fruit specialist.

Ask for His Credentials

WARNING is issued by the State Bureau of Plant Industry for buyers of nursery stock to beware of fakers. This is the time of year when representatives of nurserymen go from door to door selling nursery trees, shrubs and plants.

In order to afford protection to the public, the Bureau of Plant Industry, Pennsylvania Department of Agriculture, issues a card certificate to all reputable agents; unless the agent can display this card, no order should be placed with him. The certificates are void after October 1, 1925, so that before signing an order, it should be made very sure that the agent carries a valid card. In case the agent cannot or will not produce evidence of his honesty, this should be reported to the Pennsylvania Department of Agriculture at once.

Need Little Pruning

VERY little difference was noted in the behavior of heavily pruned plum trees and trees receiving much less pruning in tests conducted over a number of years with several standard varieties of plums on the grounds of the New York Agricultural Experiment Station at Geneva. In the opinion of the Station horticulturists most varieties of plums require but little pruning subsequent to the proper shaping of the trees after they are planted.

Since little pruning gives just as good, if not better, trees, it is regarded as a waste of time and effort to pay too much attention to the pruning of plum trees. The chief recommendation is to thin out thick growths where necessary and to remove broken or injured branches.

The only difference between the trees subjected to the two styles of pruning at the Geneva Station was that the little-pruned trees had larger and broader heads. The heads on the little-pruned trees, too, were more symmetrical than those which had been given heavier pruning.

100 bushels Oats per acre. Catalog gives details

"Hoffman's Seeds Pay"

If you believe in Good Seed, answer this ad! Here is offered to you a list of clean, sound, hardy varieties—a complete line of kinds suited to your section. Sowing such Seed on your farm this spring is going to please you, and pay you too. Mail your name and address on a post-card, get the new FREE CATALOG and you'll be starting right for a more prosperous 1925. Indeed you will!

Hoffman's Extra Quality Clovers

Because more Eastern farmers sow them every year, Hoffman's Clovers must pay! Four big reasons are:—They are Clean—Pure—Sound—Hardy! Produced on clean fields, then cleaned clean. Not mixed with weeds. Of the new crop and tested. Come from the North and withstand severe weather. Sow this seed—it pays!

Hardy Northern Grown Alfalfa Seed

Three strains, genuine U. S. Seed. The famous "Northwest" brand, true Grimm Alfalfa and very Fancy Kansas Seed. All strictly clean—tests average over 99½% pure. Here is the finest lot of valuable Alfalfas to be had anywhere. Sowing such seed insures the success of your crop. Ask for free Samples.

Heavy Yielding Seed Oats 7 Varieties

Such a complete list of valuable Oats is not offered elsewhere. Some Certified kinds—one special 'Side' Oats—several 'tree' or 'branching' types. All proven good yielders. Stiff-strawed kinds. Sound, white, heavy clean seed—all of it. Samples free. Be sure to inspect this stock before you would buy elsewhere.

Pure Bred Seed Corn Sound Germination

Here is a rare-quality Seed Corn. Good, dry, sound, well-matured corn—cared for right over the winter. Tests 92% to 98% germination. Eight kinds. Early varieties for husking, good heavy croppers, Splendid Silo Corns. Costs you only about 50c an acre. Worth many times more, anyway this year. Demand heavy. Samples FREE.

Potatoes Grains Grasses Soy Beans Field Peas

The leading standard varieties of Potatoes—some of them Certified seed. Good quality stock. All the Spring Grains, Barley, Wheat, Rye, Speltz, Buckwheat, etc. Pasture Grasses including a special Permanent Mixture, Field Peas and many varieties of Soy Beans with full cultural directions. In all—a complete list of Quality Seed.

The FACTS on Pages 17 to 35 of this FREE BOOK—

Mrs. Marie Caron, of Glenview, Ill., fancier of thoroughbred Rhode Island Reds, Red Cloud Strain, says that last season she hatched 200 chicks with hens and raised 189 on Globe Chick Starter. Seven of the chicks were killed by accident, and 4 were weaklings. She says Globe Poultry Feeds are all that is claimed for them and a bit more.

enabled others to

raise 95 out of 100 chicks

THE information in this poultry book (copy on request) has enabled thousands of chick raisers to save greater percentages of the chicks hatched. Now available to all. On the pages named you will find vital scientific principles of chick raising not known to the average poultry owner—the ignorance of which has cost poultry raisers millions of dollars.

Foremost authorities have assisted in writing this booklet "POULTRY PROFITS." Whether your flock is large or small, every extra dollar of profit you can make in chick raising or egg production means just that much extra in your bank account. "POULTRY PROFITS" contains the boiled-down "best ways" of making more money out of your poultry.

The Facts you'll get on Chick Raising

The pages referred to will give you an understanding of how a chick's digestive system works—what to do and what not to do in raising chicks. They will show you where you made costly mistakes in the past and explain the principles of a success-tested plan that enables hundreds of men and women to raise to maturity 95 out of 100 chicks hatched.

Thousands have already sent for this *free book*. It's *different* from any other on the subject. Those who use our poultry feeds declare it a contribution to the poultry industry second only in importance to Globe Poultry Feeds.

Why best informed chick raisers use Globe Chick Starter

Experience has taught them they make more money—raise more chicks using Dickinson's GLOBE CHICK STARTER than any other chick feed they can buy or mix.

The reasons why so many use nothing but GLOBE CHICK STARTER are simple. The Globe Brand is made with just one purpose in mind—results. Compounded of the highest quality of ingredients obtainable (the best animal, vegetable and cereal proteins, perfectly combined with health-giving vitamines and minerals) into a *really uniform mixture*. This *last point is extremely important.*

The use of the Globe Method eliminates guesswork and bother. When used as explained in "Poultry Profits," you can secure results as good as the most experienced poultry raiser. GLOBE CHICK STARTER makes chick raising easy—and more profitable. Globe Feed made today with an eye on tomorrow.

Ask your Globe Merchant for "POULTRY PROFITS" or Mail This Coupon

If you want to raise more of your chicks, don't wait. If you want to make more money out of poultry, don't delay. Sending for this helpful booklet puts you under no obligation.

Vital Questions This Book Answers

- Why a special starting feed?
- What eggs should be selected for hatching?
- What are the main points of incubation?
- What hatch should be expected from 100 eggs?
- What type of brooder is best?
- Which is the best breed?
- Which breed is the most profitable?
- Should the poultry raiser breed for meat or eggs?
- What is the best way to start?
- How can poor layers be discovered without a trap nest?
- How can a hen's egg production be determined in advance?
- What type of hens make the best breeders?
- What is the truth about pedigree?
- How many females should be put with a male?
- What is the secret of culling?
- How can fertile eggs be insured?
- How can egg yield be increased?
- What is the relation of vitamines to egg yield?
- Can electricity increase egg yield?
- What is the most economical method of fattening chickens?
- What type of chicken house is best?
- How should it be ventilated?
- What are the most deadly chicken diseases?
- How can they be cured or prevented?
- What is the best way to feed poultry for profit?

Plans for Poultry House

I am planning to build a chicken house this spring. Will you send me some of your best plans for a house to accomodate 100 hens?—S. F., Butler County, Pa.

The most economical house for a flock of 100 hens would be twenty feet wide and twenty feet deep which gives an area of 400 square feet or four square feet per bird.

It could be built of ship lap and covered with a good grade of roofing paper on both the sides and roof. Where the seams overlap on the sides painted strips of wood can be nailed vertically. This gives the house an attractive appearance. The shed roof type of house is usually the most economical to build.

I would suggest that you write the Pennsylvania State Experiment Station and the stations in neighboring states for their free bulletins on poultry house construction. In this way you will obtain some good plans and very complete information and can use the plan that seems most nearly to meet your requirements.—R. G. K.

The Chicks' First Meals

Please give me a formula for feeding day-old chicks; also one for growing chicks, and a scratch feed. How soon should a change be made from one to the other?—W. K., Bucks County, Pa.

A good dry mash for starting chicks can be made of equal parts of rolled oats and bran plus five per cent charcoal. The first scratch grain must be very fine and it is difficult to make it fine enough with a home grinder. So the commercial chick scratch grains are probably a good investment. As the chicks grow large enough to eat whole wheat and cracked corn they can be gradually worked over to that ration.

The commercial dried buttermilk starting mashes are fine for young chicks. Another good mash consists of eighty parts yellow corn and twenty parts standard middlings. To this mixture add five parts ground bone, five parts pure limestone and one part salt.

Some poultrymen in our section have good luck in raising chicks with the regular laying mash formulas. Of course the beef scrap must be ground fine or sifted to remove pieces too large for the chicks. —R. G. K.

To Avoid Tainted Meat

AS A result of the widespread use of cheap coal tar products with a strong carbolic acid odor for disinfecting poultry houses and coops, large quantities of poultry contaminated with the odor have been received at some of the big markets. The Bureau of Animal Industry United States Department of Agriculture, has received complaints from handlers of market poultry who have suffered heavy losses because of the unsalability of tainted fowl, one large firm reporting a loss of $10,000 on four cars.

Odor Soon Disappears

When penetrating odors are present in the disinfectant used the birds should not be marketed within less than two weeks of the time it was used, and then not in crates recently so treated.

Coops and poultry houses should always be thoroly cleaned before disinfecting. A good plan is, where possible, to scrub the interior with hot lye solution or scalding hot water. Such cleaning solutions are themselves good disinfectants. If scalding hot water is not available, the coops may be disinfected with a four per cent solution of formaldehyde. While this disinfectant has a very pungent, disagreeable smell, the odor soon disappears. If the poultry are not marketed for several weeks a three per cent solution of compound solution of cresol or a product of similar composition may be employed. Any coal-tar disinfectant is apt to leave an odor, which will gradually disappear.

THE NEW JERSEY PLAN

What Is Meant by "Certified" and "Accredited" Flocks

STATE certification of poultry flocks and hatcheries, which is also called accrediting in some states, varies widely in its application in various parts of the country. In view of this face the New Jersey Department of Agriculture has prepared the following explanation of the plan adopted in New Jersey.

Most poultry breeders are familiar with the "Standard of Perfection" issued under the direction of the American Poultry Association, which sets up a standard for each accepted standard breed of poultry, and which immediately becomes the ideal of the poultry breeder, whether so-called "fancier" or "utility" breeder. Unlike most breeds of farm livestock there does not exist a method of official registration for poultry, and does there exist a method of supervising and crediting officially creditable records of production such as has been done for years in the dairy breeds of cattle.

Penalty for Misuse of Terms

It was also felt that in order to make this poultry work really worth while it should have legal status. Therefore, all such work in New Jersey has been conducted under regulations provided for under the general provisions of Chapter 83, Laws of 1921. These regulations have therefore, legal force and the terms provided are legal terms with a penalty provided for misuse.

Jersey Black Giants were first inspected in the fall of 1923, over 50 birds being granted approval, preliminary to certification. As this is a relatively new breed it was felt best to withhold final certification of flocks until after the second year's inspection. These flocks have been granted certification during the past fall and a very noticeable improvement has been shown in most of them. Every bird in these flocks was inspected by a competent inspector for trueness to type and freedom from standard disqualifications, indications of fair egg production and general health. As this is a meat breed primarily and not an egg breed, special emphasis was placed on size and meat type rather than egg production. All birds passing inspection were banded with sealed numbered leg bands, and only such birds may be kept in breeding flocks applying for certification.

Birds Undergo Blood Test

The same general plan has been applied to other breeds this past fall and winter and approximately 25,00

birds have been certified. The following breeds have been handled: S. C. White Leghorns, Barred Plymouth Rocks, S. C. R. I. Reds, White Wyandottes and Jersey Black Giants. Practically all of these birds have been tested for bacillary white diarrhea at the time of certification, blood samples having been taken from all breeders and tested in the Poultry Pathology Laboratory of the N. J. Agricultural Experiment Station, under the direction of Dr. F. R. Beaudette, Poultry Pathologist. All birds reported as reactors were removed from breeding flocks and leg bands returned to the Department of Agriculture.

Under the regulations flocks passing consecutive non-reacting tests will be known as "accredited" flocks. In the meantime all certified and tested flocks may use the terms "New Jersey Certified and Tested Flock" in advertising hatching eggs and breeding stock.

As applied to hatcheries, any hatchery purchasing its entire supply of hatching eggs from "certified" flocks and making application for hatchery certification under the hatchery regulations is on the road to becoming a "certified hatchery." Carried a step further, a "certified hatchery" may become an "accredited hatchery" after all the flocks from which eggs are secured for hatching purposes are produced by "accredited flocks."

Cost Borne by Breeders

All flocks certified and tested for the 1925 breeding season will again be inspected and tested during the late summer and fall of this year. Leg bands will be removed from birds which do not meet the requirements and all new birds to be used as flock additions passing inspection will be leg banded. The breeders are paying the full cost of the work so that it will not become a burden on the state.

The Department of Agriculture anticipates a large number of applications during this summer and the total number will probably approach 0,000 breeding birds. In order to handle this work, applications must be received early and it is probable a closing date for receiving such applications will be established about September 1. This will be necessary in order to complete the field work prior to January 1, 1926.

Ferns for the Shady Spots

THE problem of what to plant in shady locations around the home may be solved by the use of some of our native ferns. In the main, ferns like shady locations, but some will thrive in full sun, altho they never do their best under such conditions. If planted close to a foundation or porch or under maple or linden trees especially, care must be taken to keep up the moisture and food supply, as rain seldom falls next to the foundation, and maples and lindens are surface feeders.

How and When to Transplant

Half the pleasure of the future garden will be in collecting them ourselves. The best time to transplant is in the late spring or early summer. Those which make only one set of fronds will have completed growth by that time. Dig them with a good mass of soil about the roots, and transplant with as little drying out as possible. They should be set at once and watered well. Keep them well moistened until new growth starts. Mulch with half rotted leaves between the plants, or provide a covering of moss for a mulch. This will aid in maintaining a uniform moisture supply and will permit the ferns to develop their roots near the surface.—C. H. Connors, N. J. Agricultural Experiment Station.

Mailed 50c. Established 1865.

Francis Bannerman Sons, 501 Broadway, New York City

She Paid Her Way

THE summary of the Columbia County Cow Testing Association records for the year 1924 shows that 220 cows, the average number in the association, consumed $115.35 worth of feed per head and returned $130.95 above the cost of feed. The average production per cow was 7272 pounds of milk and 305 pounds of butterfat.

During the course of the annual meeting of the Columbia County Association, it developed that the Voshen Brothers had purchased a grade Guernsey cow for $120, which later proved to be an excellent investment. At the end of the first year she stood highest in the association for production, with a record of 11,608 pounds of milk and 578.6 pounds of butterfat. The net profit on her year's production was $144.43. The following fall she was sold for $140 more than her original cost.—A. L. B.

300 Pound Honor Roll

IT HAS been announced that the National Dairy Exposition will again add to the National 300 Pound Honor Roll the names of all dairymen whose herds equal or exceed an average of 300 pounds of butterfat per cow as reported by a cow testing association for the current year ending on or before July 1, 1925.

Pennsylvania Near the Top

More than two thousand herd owners in twenty-eight states were admitted to the National Honor Roll last year. Pennsylvania furnished 220 members of this honor roll and thereby won fourth place among the states.

With forty-one cow testing associations now operating the number of Keystone herds qualifying for this honor at the nineteenth annual National Dairy Exposition in Indianapolis, Indiana, October 10 to 17, should be larger than ever this year.

Tuberculosis War Map

THE United States Department of Agriculture has issued a map-poster showing the extent of bovine tuberculosis in the country. Six different intensities of shading enable any person to see how the county in which he lives compares with others in his state and in other states with respect to the prevalence of cattle tuberculosis.

The combination poster and map is largely for the guidance of veterinarians and sanitary officials engaged in the work of eradication, but it is an illuminating presentation of the subject for livestock owners also. Officials of the Bureau of Animal Industry suggest that every livestock association should have a copy of this "war map" against the disease as a guide in the purchase of breeding stock when its health status is not otherwise known. The poster measures twenty by twenty-eight inches, is printed in red and black and may be obtained free on application to the United States Department of Agriculture, Washington, D. C.

The 1925 Dairy Show

OF INTEREST to all dairymen is the announcement that the National Dairy Exposition for 1925 will be held at the Indiana State Fair Grounds, Indianapolis, Indiana, from October 10 to 17. Indianapolis is easily accessible from all points and the state fair grounds rank with the best in the country. The cattle building is especially well arranged and ample space is provided for machinery exhibits.—B.

Money Saving Ideas
for Cow, Hog and Hen Farmers
Send Today for Your Copy

Of course you want bigger earnings from your dairy cows, hogs and poultry. The question is *"how to get them?"* This new Jamesway Book may have exactly the answer you need.

It is full of practical ideas, plans and suggestions that other farmers are using—*today*. It is written from experience, and contains only the kind of information that practical dairymen and farmers want. How to improve an old barn—How to get the right floor plan—How to save labor—How to handle the feeding and cleaning jobs, etc.

Send for this book. It is free. It tells you "how" you can install any Jamesway Equipment, steel stanchions, stalls, water cups, carriers, etc.—right now—on our "PAY-FROM-INCREASED-EARNINGS" Plan. Right in your county there is a Jamesway Man, who is able, capable and eager to help you. Our book will tell you how. Write today. Mail the coupon this instant to Dept. T

It Tells You

- How to get a good dairy barn.
- How to remodel an old barn.
- How to get good ventilation.
- The Essentials of a Good Cow Stall.
- How to give cows pasture comfort in the barn.
- How to judge a stanchion.
- How to feed cows for profit.
- How to insure "safety first" with the bull.
- How to make the cleaning job easy.
- How to water your cows in the barn.
- How to have better hogs and bigger litters.
- How to make more money from your hens.
- How Jamesway "Pay-from-Earnings" Plan pays for your equipment as you use it.

And many other helpful pointers on cow, sow and hen problems.

WE SELL DIRECT TO USER

"Jamesway" Helps Make Farming Pay

"Plant your corn, and forget about the crows"

is the message that W. E. Tyler, of Dewittville, N. Y., sends us, and permits us to broadcast to the thousands of corn-growers all over the country. Mr. Tyler, like every other corn-grower, had been losing hill after hill of corn. Scare-crows nor shot-guns could keep his fields clear of the pests. And what the crows didn't spoil, the moles, squirrels and gophers got away with as fast as they could. What to do, what to do, what to do, was Mr. Tyler's daily worry. Every day it became necessary to replant, costing him valuable time and valuable seed-corn. Then he heard of

Stanley's Crow Repellent

Like most other corn-growers, Mr. Tyler didn't believe that anything could stop the awful waste caused by the pesky crows. But he was willing to try almost everything. So he sent for some Stanley's Crow Repellent. He coated his seed-corn with it, and planted it at once, as it is not necessary to wait for it to dry, nor does it clog the planter. And from that day, Mr. Tyler's worries over crows were over for good and all time. If you want to stop your worries too, then do as hundreds of corn-growers are doing. Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.50. Half size can, $1.00. "Money Back" guarantee. If your hardware, drug or seed store doesn't have it in stock, then order direct. Address, Cedar Hill Formulae Co., Box 500R, New Britain, Conn.

No. I'm not dead, but what is that stuff.
Let's get him out of this quick.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., discovered a process of making a new kind of paint without the use of oil. He named it Powdr-paint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much. Write to **A. L. Rice, Inc., Manufacturers, 114 North St., Adams, N. Y.**, and a trial package will be mailed to you, also color card and full information showing you how you can save a good many dollars. Write today.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry,
Pennsylvania State College

A Proven Feeding Schedule for Young Calves

I have several calves which I would like to raise for the dairy. Please suggest the proper formula for feeding these calves until spring. How old must the calves be before I can stop feeding milk? Is there anything I can substitute for milk?—J. M., Susquehanna County, Pa.

A home mixed calf meal can be made up of equal parts by weight of hominy feed, red dog flour, linseed oil meal, and blood flour. The Indiana Station at La Fayette, Indiana, has experimented rather extensively with this preparation and gives the following directions for its use in Bulletin 193.

When used in the place of milk, home mixed calf meal should be mixed with warm water (100 degrees F) in the proportion of one pound of calf meal to each gallon of water. In case less than one gallon of the mixture is used for feeding, make the necessary reduction when mixing, as it is not advisable to have the material mixed previous to the time of feeding. It is important to use accurate amounts of calf meal and water when mixing.

After the calf is drinking readily from the bucket at about ten days of age, substitute a small portion of the milk at each feeding with an equal amount of gruel, prepared by mixing the calf meal as above suggested. Gradually increase the amount of gruel fed, placing the calf on this material exclusively, at four or five weeks of age. Do not feed over one gallon of the mixture per day, previous to the time the calf is one month of age.

Changes Must Be Gradual

Home mixed calf meal is a concentrated feed and in order to be successful with its use it is necessary to make all changes, in amount of materials fed, gradually. Overfeeding is also responsible for much trouble in calf raising and the careful feeder will constantly guard against this source of trouble.

If home mixed calf meal is to be used as a supplement to skimmilk, it should be used in very small quantities at first, and as the meal ration is increased, the milk ration should be reduced. When the Indiana Station used the skimmilk substitute as described, a grain mixture consisting of equal parts by weight of corn meal and ground oats, the roughage was alfalfa hay and silage. A grain mixture that has been used successfully at the Pennsylvania Station to supplement skimmilk and mixed hay is composed of 100 pounds corn meal, 100 pounds ground oats, 100 pounds bran, 50 pounds oil meal and 8 pounds blood flour.

Precautions in Calf Raising

1. After ten days of age, a calf will do well if fed but twice per day. However, the hours of feeding should be regular and as nearly twelve hours apart as practical.

2. The temperature of milk as it is drawn from the cow is approximately 100 degrees Fahrenheit. The feeder should maintain a uniform temperature of the liquid ration at all times and under all conditions, especially during the first eight or ten weeks of the life of the calf.

3. The digestive system of the calf is undeveloped and very delicate. This condition demands that careful attention be given to the amount of feed fed. The average calf has an appetite far in excess of its ability to assimilate. As a result, it is necessary to control the amount and kind of feed consumed. In other words, select the proper feed and do not overfeed.

4. Due to the sensitive condition of a young calf's digestive tract, it is necessary that all changes in amount and kind of feed fed be made gradually and regularly.

5. In order to be assured that each calf obtain the amount of feed specified, it is absolutely essential that they be fed in individual pails, rather than from a common trough.

6. After a calf is a few days of age, it is necessary that it be supplied with an abundance of good, pure water for drinking purposes.

Cleanliness Prevents Many Ailments

7. After a calf begins to consume dry feeds, it is best to provide it with a small amount of salt each day.

8. The buckets in which the liquid ration is fed, as well as the trough used for the grain, should be kept scrupulously clean, if digestive troubles are to be controlled.

9. The calf that is housed in a dry, airy stall, constructed of materials that are easily cleaned, and designed to admit an abundance of sunlight, has the most favorable environment for maximum development. Some of the most common and fatal diseases that attack young calves are caused to no small extent by requiring them to sleep upon a cold damp floor. For best results, they should be provided with an abundance of clean dry straw for bedding, which must be changed frequently to keep the stall in good condition.

10. The feeding of roughage, such as alfalfa or clover hay, is a splendid and necessary practice. If they prove to be too laxative, first substitute timothy hay or a good quality of oat straw during the first month or six weeks. A calf should begin to eat hay at ten days or two weeks of age.

The Proper Amount to Feed

11. The amount of liquid feed required by a young calf will depend largely upon its weight at birth. In general, calves vary in weight at birth from 40 to 115 pounds, and it is obvious that the same rule for feeding will not apply to all cases. One must exercise his own judgment in this matter to a certain extent, as the experienced feeder realizes the responsibility of the man in charge of the actual feeding operations. The following may serve as a guide, however, and in the main is sufficiently specific, concerning the amount of feed and the rate of increase:

Birth Weight 50-70 Pounds—Jerseys and Guernseys

POUNDS OF FEED PER DAY

Age		Lbs. whole milk	Lbs. skimmilk or substitute	Lbs. grain
1-3	days	with dam	0	0
3-14	"	8-10	0	0
2-3	weeks	6-8	1-3	⅛
3-4	"	3-5	3-5	¼
4-5	"	1-3	6-8	½
5-6	"		8-10	¾
6-8	"		9-11	1
8-12	"		10-12	2
12-24	"		10-12	2-3

Feed all the clover hay the calf will eat after the second week; one-fourth to two pounds of silage may be fed, beginning with the twelfth week.

12. A calf will begin to eat grain at the age of ten days to two weeks. It is best fed dry. A small amount may be placed in the pail when the calf has finished drinking its milk. The calf will thus get a taste of the grain and will soon learn to eat it.

Birth Weight 70-100 Pounds—Ayrshires and Holsteins

POUNDS OF FEED PER DAY

Age		Lbs. whole milk	Lbs. skimmilk or substitute	Lbs. grain
1-3	days	with dam	0	0
3-14	"	10-12	0	0
2-3	weeks	7-9	1-3	⅛
3-4	"	4-6	4-6	¼
4-5	"	1-3	7-9	½
5-6	"		10-12	¾
6-8	"		11-13	1
8-12	"		12-14	2
12-24	"		12-14	2-3

Feed all the clover hay the calf will eat after the second week; one-fourth to two pounds of silage may be fed, beginning with the twelfth week.—A. A. Borland.

Doesn't Burn Out Cows

I was told that gluten should not make up more than one-quarter of mixture as in time it would make cows barren and would burn them out in six months. I would like to know if that is the truth.—D. A., Crawford County, Pa.

It is all "bosh" about gluten feed making a cow barren or burning her out in six months. Gluten feed is a desirable concentrate for dairy cows. It is a by-product from the manufacture of starch and it contains most of the protein from corn along with some of the carbohydrates. It is a nutritious and fairly palatable feed. There seems to be a common impression abroad that any feed which is a good milk maker is likely to burn the cow out, as it is termed. Corn silage has been accused of doing likewise.

The mere fact that corn silage is succulent and palatable is no reason why it should have an injurious effect upon the cow. Likewise the fact that gluten feed, linseed oil meal and other high protein concentrates are conducive to a liberal milk flow is not a good argument that they will ruin a cow. A grain mixture might easily be made more than one-quarter gluten feed without having any harmful effects on the animal.—A. A. B.

Bedford Uses Good Sires

TWENTY-FOUR of the twenty-six members of the Bedford County Cow Testing Association own silos according to the last report of the association tester, Mr. Shingledecker. While only twenty-five per cent of the farms in Bedford County have silos in use, they are now being used on ninety-two per cent of the farms owned by members of the association.

Ten of the members own purebred herd sires, fourteen others belong to a bull association, and only two members do not use purebred sires at the present time. However, one of these has purchased a purebred bull calf which will soon replace the scrub bull now in service. The percentage of purebred bulls used in this association compares very favorably with the percentage of such bulls used in Pennsylvania as only twenty-eight per cent of the total number of herd sires in this state are purebred.—A. L. B.

"Edward, you disobeyed your grandmother when she told you just now not to jump down those stairs."

"Grandma didn't tell us not to, papa. She only came to the door and said: 'I wouldn't jump down those stairs, boys.' And I shouldn't think she would, an old lady like her!"

There is no substitute for Linseed OIL MEAL

Considering the Results

THE best stockmen everywhere appreciate the virtues of Linseed Oil Meal. They know by experience that there is no more healthful feed for use with all classes of farm animals. Not only is it rich in protein (32 to 36 per cent) but fully as important are its other properties. And it is one of the safest of feeds for all kinds of stock. One does not have to be careful in using it; it is as good for swine as it is for dairy cows, and sheep or horses benefit from it the same as do beef cattle. Glance briefly below and see

What It Is And What It Does

It pays large returns on the investment.
It is rich in protein.
It is a mild laxative, mucilaginous and soothing.
It is safe.
It is palatable.
It can be profitably fed to all farm animals.
It makes mellow hides and silky hair.
It is widely used for cows on test; lengthens lactation.
Extensively used for fitting animals for show.
It improves the thrift of animals.
It lessens the time needed to fatten stock.
It saves a large bulk of other feeds.
It is contained in nearly all good mixed feeds.
It is highly digestible.
It helps make other feeds more valuable.
It greatly increases the value of the manure.

"How to Make Money With Linseed Oil Meal"

A condensed and up-to-the-minute feeding guide—is yours for the asking. It is written by Prof. F. B. Morrison, Asst. Director of the Wisconsin Experiment Station and author, with W. A. Henry, of the recognized American authority on stock feeding—"Feeds and Feeding." This book will show you how you can make your present feeding system pay much greater profit—or point the way to new and better rations. Send for your copy now—free.

Fuel for the Milk Producers

Something about the Analysis of Dairy Feeds

A COW may be likened to a machine such as a gasoline engine. A machine of this kind requires two things to keep it in good working order, repair material and fuel.

The repair materials for the body of the cow are water, mineral matter and protein. The water is a very important substance for food, making up over half of a cow's body, and eighty-seven per cent of the milk. Water, however, is abundant, so that usually little attention is paid to it in making up a ration. It is important, however, that the cow get plenty of it.

Some farmers lose money in the winter time by allowing cows to go down across the field to a pond where the ice must be broken. It is doubtful if a cow drinks enough water to do her best under these conditions. Those who have installed individual drinking cups in the stable so that the cows may have constant access to water have usually come to the conclusion that this is a paying proposition.

Minerals Build the Bones

Mineral matter, which makes up a considerable portion of the skeleton of the cow is also an important repair material. However, cows that get plenty of good clover or alfalfa hay along with a fair grain allowance will not suffer from a lack of mineral matter.

Protein is another very important repair material. It makes up about sixteen per cent of the animal's body and comprises 3.4 per cent of the milk. This is the repair material which usually the farmer has to consider most carefully.

Carbohydrates and fats are fuel substances which are burned in the animal's body very much as gasoline is burned in a gasoline engine to furnish the energy to make the machine go. Table I gives an idea as to the amounts of protein, carbohydrates and fat in a few of the com feeds.

Table I

Feeding stuff	Crude protein per cent	Fibre per cent	Carbohydrates N. free extract	Fat per cent
Barley	11.5	4.6	69.8	2.1
Buckwheat	10.8	10.3	62.2	2.5

Corn silage	2.1	6.3	15.4	.8

† Ears removed; medium in water.

Not all of the feed that a cow is digested. In fact, there are sev losses before a cow has the net value which she can build into or can make into milk. Some of feed is undigested and there losses in the urine, in gases, and the actual work of digestion.

It is usually assumed that manure from a cow represents undigested portion and that the mainder may be used for meat milk. Therefore, the digestible alysis of these feeds is a better as to their actual value for milk duction purposes than is the analysis such as is given in Ta

Table II

Feeding stuff	Dig. crude protein per cent	Dig. carbo-hydrates per
Barley	9.	66.8
Buckwheat	8.1	49.1
Shelled corn No. 2	7.1	64.8
Corn and cob meal	6.1	63.1
Oats	9.7	52.1
Wheat	9.2	67.5
Rye	9.9	68.4
Corn gluten feed	21.6	51.9
Corn gluten meal	30.2	42.9
Cottonseed meal (choice)	37.0	21.8
Linseed oil meal (o.p.)	30.2	32.6
Wheat bran	12.5	41.6
Alfalfa hay	10.6	39.0
Clover hay (red)	7.6	39.3
Timothy hay	3.0	42.8
Corn stover †	2.1	41.4
Corn silage	1.1	15.0

† Ears removed; medium in

However, since different ani differ in their ability to digest and since there have been a paratively small number of dig trials run on some of the newer manufacturers of proprietary place on the bags only the crude alysis of the feed. If one wants put together the combination farm-grown feeds with cotto meal, linseed meal, gluten meal, other high protein feeds, and compare the average analysis of mixture with that of some pr tary feed, he would use the fi given in Table I.

Why Crude Analysis Is Giv

In Pennsylvania, all propri feeds must have a guaranteed a sis on the sack or attached th The feed must be guaranteed to tain at least so much protein, least so much fat, not over so fibre. Fibre is woody and hard digest and usually the more fibre feed contains, the poorer it is.

Anyone wishing to get the an sis of the proprietary feeds sold Pennsylvania during the year should write to the Department Agriculture, Harrisburg, and ask Bulletin 391. This gives a com table of the analysis of samples feeding stuffs collected by the eau of Chemistry during the 1923. The bulletin is free for asking. Write to Harrisburg for it.

The digestible analysis of feeds is the better index of their value to the animal, since this type of analysis shows how much food value the animal actually gets out of the different feeds. In Table II is given the digestible analysis of the same feeds as are mentioned in Table I.

It will be noted from the inspection of the above list that the common farm grains are low in protein and that gluten feed, gluten meal, cottonseed meal, and linseed meal are high in protein feeds. Some of these should be mixed with the farm grown grains in order to make a properly balanced ration for dairy cattle.

Corn Stover Better than Timothy

From an inspection of the roughages listed, it will be noted that alfalfa and clover hay are high in protein and that timothy hay is low. It is evident that clover hay has more than twice as much protein as timothy hay. This is one of the reasons why clover and alfalfa hays are such good feeds for milk production purposes. Timothy hay is too low in protein to make it a good milk producing feed. In fact, corn stover contains two-thirds as much protein as clover hay, and would usually be a very much more economical roughage than timothy.

A good bulletin dealing with the computation of rations is No. 161 of the Pennsylvania State College. This can be secured free of cost by writing to the Agricultural Experiment Station, State College, Pennsylvania.
—A. A. Borland.

Share With Others Those Good Pictures

THE editors of Pennsylvania Farmer would like to receive from readers some good photographs showing farm scenes, buildings, machinery, livestock, crops, and children. Nowadays, when nearly every farm has at least one amateur photographer, we feel that there must be many good farm pictures that are deserving of a wider showing than they get in the family photograph album. If you have clear, sharp photographs which you believe would interest other readers we shall be glad if you will let us see them. Unmounted photographs on glossy paper are preferred. Mail them flat, carefully wrapped with cardboard to prevent damage in transit. Be sure to write your name and address on the back of each picture, and enclose postage for the return of any which may not be found suitable for publication. Mail the photographs to the Editorial Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

Value of Ensilage

Please inform me how to determine the value of ensilage in the silo. I want to be able to make a fair charge for ensilage I am selling.—D. L. A., Mercer County, N. J.

The most equitable basis of determining the value of a ton of silage is its relation to the market price of corn. The following table has been worked out at the Pennsylvania State College in determining the price which the Animal Husbandry and the Dairy Husbandry Departments shall pay the College farm for silage. This was for Lancaster County Sure-Crop corn with a fair ear on the corn when it went into the silo.

If the corn were a large variety with few mature ears on it then the price for the silage per ton should be less than the figures in the table. On the other hand, if the corn was of a small variety with well matured ears, then the price for silage should be higher than the figures given in the table.

This table was worked out on a comparison of the salable market corn that would come from a given acreage as compared with the amount of silage that would be yielded on the same acre. The stover was valued at $5.00 per ton in making the calculation and the market price of corn taken as the basis.

Price of corn per bushel.	Value of Silage per ton.
$ .70	$3.96
.80	4.40
.90	4.84
1.00	5.28
1.10	5.62
1.20	6.06
1.30	6.50
1.40	6.94
1.50	7.38

—A. A. Borland.

First Street Cleaner—So Bill's dead; Bill was a good street cleaner.

Second Street Cleaner—Yes, Bill was a good street cleaner, but don't you think he was a little weak around the lamp-posts?—Oklahoma Whirlwind.

Goodyear HEAVY DUTY Cord Tires are available from Goodyear Dealers in the following sizes:

30 x 3½ (Cl.) 34 x 4½ (S. S.)
32 x 4 (S. S.) 30 x 5 "
33 x 4 " 33 x 5 "
32 x 4½ " 34 x 5 "
35 x 5 (S. S.)

For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes.

MASTER of rough roads and first friend of hard drivers—the new Goodyear HEAVY DUTY Cord Tire. Thicker, tougher, more rugged all through. The sidewalls reinforced against rut-wear. The heavy carcass built of SUPERTWIST. If you *need* a HEAVY DUTY Tire, here's a real one—built to serve economically in the dependable Goodyear way.

Why Craine Silos Are Used by the Largest Dairies

Because they are strong, durable and economical, and make the best quality of silage year after year without attention or repairs.

Craine Silos are found on the largest and finest dairy farms in the country. Walker-Gordon Laboratory Company Farms and Sheffields Farms each with over forty Craines and Crainelox Rebuilt Silos. Borden Farms and Federal, State, County and Township institutions are large users of Craine Silos.

These buyers do not make their investments in Silos on guess work. They know that Craine Silos will make better silage and cost less in the end.

For these same reasons it will pay you to own a Craine.

Built best, cost less. Get our catalog. It's a Silo book that will prove interesting and of real value to you. Write today.

Continued

I HAD hoped the Senator would ask me to dinner, but the coming of the President had upset the chance of it. It was eleven o'clock. Mrs. Hacket had put a cold bite on the table for me. I ate it—not to keep it waiting—and sat down with my eyes on my book and my mind at the Dunkelbergs'—where I heard in a way what Sally was saying and what "Mr. and Mrs. Horace Dunkelberg" were saying.

At twelve-thirty Mr. Dunkelberg came for me, with a high-stepping horse in a new harness and a shiny still-running buggy. He wore gloves and a beaver hat and sat very erect and had little to say.

"I hear you met the President," he remarked.

"Yes, sir. I was introduced to him this morning," I answered a bit too proudly, and wondering how he had heard of my good fortune, but deeply gratified at his knowledge of it.

"What did he have to say?"

I described the interview and the looks of the great man. Not much more was said as we sped away toward the deep woods and the high hills.

I was eager to get home, but wondered why he should be going with me to talk with Mr. Grimshaw and my uncle. Of course I suspected that it had to do with Amos, but how I knew not. He hummed in the rough going and thoughtfully flicked the bushes with his whip. I never knew a more persistent hummer.

What a thrill came to me when I saw the horse and the popple tree and the lilac bushes—they looked so friendly! Old Shep came barking up the road to meet us and ran by the buggy side with joyful leaps and cries. With what affection he crowded upon me and licked my face and hands when my feet were on the ground at last! Aunt Deel and Uncle Peabody were coming in from the pasture lot with sacks of butternuts on a wheelbarrow. My uncle clapped his hands and waved his handkerchief and shouted "Hooray!"

Aunt Deel shook hands with Mr. Dunkelberg and then came to me and said:

"Wal, Bart Baynes! I never was so glad to see anybody in all the days o' my life—ayes! We been lookin' up the road for an hour—ayes! You come right into the house this minute—both o' you."

The table was spread with the things I enjoyed most—big brown biscuits and a great comb of honey surrounded with its nectar and a pitcher of milk and a plate of cheese and some jerked meat and an apple pie.

"Set right down an' eat—I just want to see ye eat—ayes I do!"

AUNT DEEL was treating me like company and with a pleasant touch of the old company finish in her voice and manner. It was for my benefit—there could be no doubt of that—for she addressed herself to me chiefly, and not to Mr. Dunkelberg. My absence of a few days had seemed so long to them! It had raised me to the rank of company and even put me above the exalted Dunkelbergs, altho if Mrs. Horace Dunkelberg had been there in her blue silk and gold chain, "big enough to drag a stone boat," as Aunt Deel used to say, she might have saved the day for them. Who knows? Aunt Deel was never much impressed by any man save Silas Wright, Jr.

Mr. Grimshaw came soon after we had finished our luncheon. He hitched his horse at the post and came in. He never shook hands with anybody. In all my life I have met no man of scanter amenities. All that kind of thing was, in his view, I think, a waste of time, a foolish encouragement to men who were likely to be seeking favors.

"Good day," he said, once and for all, as he came in at the open door. "Baynes, I want to have a talk with you and the boy."

I REMEMBER how each intake of his breath hissed thru his lips as he sat down. How worn and faded were his clothes and hat, which was still on his head! The lines on his rugged brow and cheeks were deeper than ever.

"Tell me what you know about that murder," he demanded.

Who Has a Picture to Beat This?

The children of Mr. and Mrs. Thomas Wagner, Berks County, Pa. There are four boys and four girls, ranging in age from two to twenty years.

"Wal, I had some business over to Plattsburg," my uncle began. "While I was there I thought I'd go and see Amos. So I drove out to Beekman's farm. They told me that Amos had left there after workin' four days. They gave him fourteen shillin's an' he was goin' to take the stage in the mornin'. He left some time in the night an' took Beekman's rifle with him, so they said. There was a piece o' wood broke out o' the stock o' the rifle. That was the kind o' gun that was used in the murder."

It surprised me that my uncle knew all this. He had said nothing to me of his journey or its result.

"How do you know?" snapped Mr. Grimshaw.

"This boy see it plain. It was a gun with a piece o' wood broke out o' the stock."

"Is that so?" was the brusque demand of the money lender as he turned to me.

"Yes, sir," I answered.

"The boy lies," he snapped, and turning to my uncle added: "Yer mad 'cause I'm tryin' to make ye pay yer honest debts—ain't ye now?"

We were stunned by this quick attack. Uncle Peabody rose suddenly and sat down again. Mr. Grimshaw looked at him with a strange smile and a taunting devilish laugh came out of his open lips.

Uncle Peabody, keeping his temper, shook his head and calmly said: "No I ain't anything ag'in' you or Amos, but it's got to be so that a man can travel the roads o' this town without gettin' his head blowed off."

Mr. Dunkelberg jumped into the breach then, saying:

"I told Mr. Grimshaw that you hadn't any grudge against him or his boy and that I knew you'd do what you could to help in this matter."

"Of course I'll help in any way I can," my uncle answered. "I couldn't harm him if I tried—not if he's innocent. All he's got to do is prove where he was that night."

"Suppose he was lost in the woods?" Mr. Dunkelberg asked.

"The truth wouldn't harm him any," my uncle insisted. "Them tracks wouldn't fit his boots, an' they'd have to."

Mr. Dunkelberg turned to me and asked:

"Are you sure that the stock of the gun you saw was broken?"

"Yes, sir—and I'm almost sure it was Amos that ran away with it."

"Why?"

"I picked up a stone and threw it at him and it grazed the left side of his face, and the other night I saw the scar it made."

My aunt and uncle and Mr. Dunkelberg moved with astonishment as I spoke of the scar. Mr. Grimshaw, with keen eyes fixed upon me, gave a little grunt of incredulity.

"Huh!—Liar!" he muttered.

"I am not a liar," I declared with indignation, whereupon my aunt angrily stirred the fire in the stove and Uncle Peabody put his hand on my arm and said:

"Hush, Bart! Keep your temper, son."

"If you tell these things you may be the means of sending an innocent boy to his death," Mr. Dunkelberg said to me. "I wouldn't be too sure about 'em if I were you. It's so easy to be mistaken. You couldn't be sure in the dusk that the stone really hit him, could you?"

I answered: "Yes, sir—I saw the stone hit and I saw him put his hand on the place while he was running. I guess it hurt him some."

"Look a' here, Baynes," Mr. Grimshaw began in that familiar scolding tone of his. "I know what you want an' we might jest as well git right down to business first as last. You keep this boy still an' I'll give five years' interest."

Aunt Deel gave a gasp and quickly covered her mouth with her hand. Uncle Peabody changed color as h rose from his chair with a strang look on his face. He swung his bi right hand in the air as he said:

"By the eternal jumpin'—"

He stopped, pulled down the lef sleeve of his flannel shirt and walke to the water pail and drank out o the dipper.

"The times are hard," Grimshaw resumed in a milder tone. "Thes days the rich men dunno what' a-comin' to 'em. If you don't have n interest to pay you ought to git along easy an' give this boy the eddication of a Sile Wright."

THERE was that in his tone and face which indicated that in his opinion Sile had more "eddication" than any man needed.

"Say, Mr. Grimshaw, I'm awfu sorry for ye," said my uncle as he returned to his chair, "but I've always learnt this boy to tell the truth an' the hull truth. I know the danger I'm in. We're gettin' ol It'll be hard to start over ag'in a you can ruin us if ye want to an' I' as scared o' ye as a mouse in a cat paw, but this boy has got to tell the truth right out plain. I couldn't muzzle him if I tried—he's too much of a man. If you're scared o' the truth you mus' know that Amos i guilty."

Mr. Grimshaw shook his head with anger and beat the floor with the end of his cane.

"Nobody knows anything o' th kind, Baynes," said Mr. Dunkelberg. "Of course Amos never thought killing anybody. He's a harml kind of a boy. I know him well an so do you. The only thing that any body ever heard against him is th he's a little lazy. Under the circum stances Mr. Grimshaw is afraid th Bart's story will make it difficult f Amos to prove his innocence. J think of it. That boy was lost a wandering around the woods at th time o' the murder. As to that sca Amos says that he ran into a st when he was going thru a thicket the night."

Uncle Peabody shook his h with a look of firmness.

Again Grimshaw laughed betw his teeth as he looked at my unc In his view every man had his pri

"I see that I'm the mouse a you're the cat," he resumed, as th curious laugh rattled in his thro "Look a' here, Baynes, I'll tell what I'll do. I'll cancel the h mortgage."

Again Uncle Peabody rose fr his chair with a look in his fa which I have never forgotten. H his voice rang out!

"No, sir!" he shouted so lou that we all jumped to our feet a Aunt Deel covered her face with h apron and began to cry. It was li the explosion of a blast. Then t fragments began falling with a l crash:

"NO, SIR! YE CAN'T BUY TH NAIL ON MY LITTLE FINGER O HIS WITH ALL YER MONEY!"

IT WAS like the shout of Isra from the top of the mounta Shep ran into the house with ha on end and the chickens cackled a the old rooster clapped his wi and crowed with all the power his lungs. Every member of th little group stood stock-still a breathless.

I trembled with a fear I could n have defined. Quick relief ca when, straightway, my uncle we out of the room and stood on th stoop, back toward us, and blew h nose vigorously with his big re handkerchief. He stood still lookin down and wiping his eyes. Mr. Gri shaw shuffled out of the door, h cane rapping the floor as if his arm had been stricken with palsy in a moment.

Mr. Dunkelberg turned to my aunt, his face scarlet, and muttered an apology for the disturbance and followed the money-lender.

I remember that my own eyes were wet as I went to my aunt and kissed her. She kissed me—a rare thing for her to do—and whispered brokenly but with a smile: "We'll go down to the poorhouse together, Bart, but we'll go honest."

"Come on, Bart," Uncle Peabody called cheerfully, as he walked toward the barnyard. "Le's go an' git in them but'nuts."

He paid no attention to our visitors—neither did my aunt, who followed us. The two men talked together a moment, unhitched their horses, got into their buggies and drove away. The great red rooster had stood on the fence eyeing them. As they turned their horses and drove away slowly toward the gate, he clapped his wings and crowed lustily.

"Give it to 'em, ol' Dick," said Uncle Peabody with a clap of his hands. "Tell 'em what ye think of 'em."

At last the Dunkelbergs had fallen—the legendary, incomparable Dunkelbergs!

"Wal, I'm surprised at Mr. Horace Dunkelberg tryin' to come it over us like that—ayes! I be," said Aunt Deel.

"Wal, I ain't," said Uncle Peabody. "Ol' Grimshaw has got him under his thumb—that's what's the matter. You'll find he's up to his ears in debt to Grimshaw—prob'ly."

As we followed him toward the house, he pushing the wheelbarrow loaded with sacks of nuts, he added:

"At last Grimshaw has found somethin' that he can't buy an' he's awful surprised. Too bad he didn't learn that lesson long ago."

He stopped his wheelbarrow by the steps and we sat down together on the edge of the stoop as he added:

"I got mad—they kep' pickin' on me so—I'm sorry, but I couldn't help it. We'll start up ag'in somewheres if we have to. There's a good many days' work in me yet."

As we carried the bags to the attic room I thought of the lodestone and the compass and knew that Mr. Wright had foreseen what was likely to happen. When we came down Uncle Peabody said to me:

"Do you remember what you read out of a book one night about a man sellin' his honor?"

"Yes," I answered. "It's one o' the books that Mr. Wright gave us."

"It's somethin' purty common sense," he remarked, "an' we stopped an' talked 't over. I wish you'd git the book an' read it now."

I found the book and read aloud the following passage:

"Honor is a strange commodity. It can not be divided and sold in part. All or none is the rule of the market. While it can be sold in a way, it can not be truly bought. It vanishes in the transfer of its title and

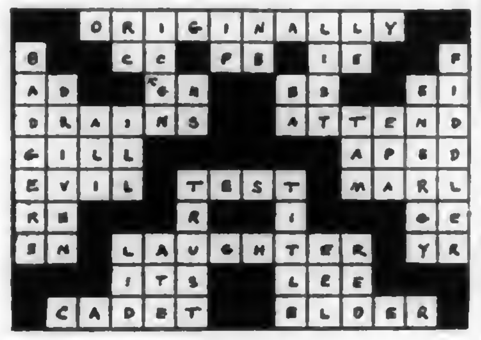
LAST WEEK'S PUZZLE ANSWER



Fingers that didn't know how

HE SAT down at the piano and strummed on it—how he wished that he could play. But his fingers were clumsy—they didn't know how. If only there had been a good piano in his home when he was young.

There are many thousands who regret that they did not learn to play when they were young. Perhaps there was no piano in the house. Perhaps it was a piano without charm—one that lacked power to please or inspire.

If you have never played the piano in your life, you need not be without good music. With a Weaver Player Piano in your home, you can, with very little practice, play well anything that you desire.

The choice of a Weaver Player Piano will always be a source of self-congratulation to you. Go to a Weaver display room and listen to the enchanting purity of the Weaver's rich, full tone—and you will understand why this country's foremost teachers and musicians pay tribute to the Weaver as one of the few great pianos of the day. To play it once—is to be immediately impressed by the Weaver's wonderful action. These exceptional qualities in the Weaver Player Piano remain through a lifetime of constant use.

Write for the name of the dealer in your vicinity. Ask for the interesting Weaver catalog. Convenient terms easily arranged—and a liberal allowance made on your present piano.

The Light in the Clearing

(Continued from page 21)

is no more. Who seeks to buy it gains only loss. It is the one thing which distinguishes manhood from property. Who sells his honor sells his manhood and becomes simply a thing of meat and blood and bones—a thing to be watched and driven and cudgeled like the ox—for he has sold that that he can not buy, not if all the riches in the world were his."

A little silence followed the words. Then Uncle Peabody said:

"That's the kind o' stuff in our granary. We've been reapin' it out o' the books Mr. Grimshaw scolded about, a little here an' a little there for years, an' we knew it was good wheat. If he had books like that in his house mebbe Amos would 'a' been different. He wouldn't 'a' had to come here tryin' to buy our honor like you'd buy a hoss."

"Oh, dear!" Aunt Deel exclaimed wearily, with her hands over her eyes; "a boy has to have somethin' besides pigs an' cattle an' threats an' stones an' hoss dung an' cow manure to take up his mind."

Uncle Peabody voiced my own feeling when he said:

"I feel sorry, awful sorry, for that boy."

We spent a silent afternoon gathering apples. After supper we played Old Sledge and my uncle had hard work to keep us in good countenance. We went to bed early and I lay long hearing the autumn wind in the popple leaves and thinking of that great thing which had grown strong within us, little by little, in the candle-light.

"A dead fish can swim downstream but only a live one can swim up it," said Uncle Peabody as we rode toward the village together. We had been talking of that strong current of evil which had tried to carry us along with it. I understood him perfectly.

It was a rainy Sunday. In the middle of the afternoon Uncle Peabody and I had set out in our spring buggy with the family umbrella—a faded but sacred implement, always carefully dried, after using, and hung in the clothes press. I remember that its folded skirt was as big around as my coat sleeve and that Uncle Peabody always grasped it in the middle, with hand about its waist, in a way of speaking, when he carried it after a shower. The rain came on again and with such violence that we were drenched to the skin in spite of the umbrella. It was still raining when we arrived at the familiar door in Ashery Lane. Uncle Peabody wouldn't stop.

"Water never scares a live fish," he declared with a chuckle as he turned around. "Good-bye, Bart."

He hurried away. We pioneers rarely stopped or even turned out for the weather. Uncle Peabody used to say that the way to get sick was to change your clothes every time you got wet. It was growing dusk and I felt sorry for him.

"Come in," said the voice of the schoolmaster at the door. "There's good weather under this roof."

He saw my plight as I entered.

"I'm like a shaggy dog that's been in swimming," I said.

"Upon my word, boy, we're in luck," remarked the schoolmaster.

I looked up at him.

"Michael Henry's clothes—sure they're just the thing for you!"

"Will they go on me?" I asked, for, being large of my age, I had acquired an habitual shyness of things that were too small for me, and things, too, had seemed to have got the habit of being too small.

"As easily as Nick Tubbs goes on a spree, and far more becoming, for I do not think a spree ever looks worse than when Tubbs is on it. Come with me."

I followed him up-stairs, wondering how it had happened that Michael Henry had clothes.

He took me into his room and brought some handsome soft clothes out of a press with shirt, socks and boots to match.

"There, my laddie buck," said he, "put them on."

"These will soon dry on me," I said.

"Put them on—ye laggard! Michael Henry told me to give them to you. It's the birthday night o' little Ruth, my boy. There's a big cake with candles and chicken pie and jellied cookies and all the like o' that. Put them on. A wet boy at the feast would dampen the whole proceedings."

I put them on and with a great sense of relief and comfort. They were an admirable fit—too perfect for an accident, altho at the time I thought only of their grandeur as I stood surveying myself in the looking-glass. They were of blue cloth and I saw that they went well with my blond hair and light skin. I was putting on my collar and necktie when Mr. Hacket returned.

"God bless ye, boy," said he. "There's not a bear in the township whose coat and trousers are a better fit. Sure if ye had on a beaver hat y'ed look like a lawer or a statesman. Boy! How delighted Michael Henry will be! Come on now. The table is spread and the feast is waiting. Mind ye, give a good clap when I come in with the guest."

We went below and the table was very grand with its great frosted cake and its candles, in shiny brass sticks, and its jellies and preserves with the gleam of polished pewter among them. Mrs. Hacket and all the children, save Ruth, were waiting for us in the dining-room.

"Now sit down here, all o' ye, with Michael Henry," said the schoolmaster. "The little lady will be impatient. I'll go and get her and God help us to make her remember the day."

He was gone a moment, only, when he came back with Ruth in lovely white dress and slippers and gay with ribbons, and the silver beads of Mary on her neck. We clapped our hands and cheered and, in the excitement of the moment, John tipped over his drinking glass and shatterde it on the floor.

"Never mind, my brave lad—no glass ever perished in a better cause. God bless you!"

What a merry time we had in spite of recurring thoughts of Uncle Peabody and the black horse toiling over the dark hills and flats in the rain toward the lonely farm and the lonelier, beloved woman who awaited him! There were many shadows in the way of happiness those days but, after all, youth has a way of speeding thru them—hasn't it?

We ate and jested and talked, and the sound of our laughter drowned the cry of the wind in the chimney and the drumming of the rain upon the windows.

(To be continued next week)

"Mandy, I's heerd yo' is still lettin' dat no 'count man from Dog Town hang aroun'. Is dat so?" asked a colored swain of his equally colored lady love.

"Who dat been sayin' I is?"

"Dassal right who bin sayin' yo' is. De p'int is, is yo'?"

"I ain't sayin' I is."

"Well, yo' ain't sayin' yo' ain't. Ef yo' ain't, yo is."

"Ef I is, I is, an' 'ef I ain't, I ain't. 'Tain't none of yo' business whether I ain't or is!"

"Yo' ain't sayin' yo' ain't. Dat mek it yo' is. Ain't yo?"

"Ef I is, I ain't gwine say I is, an' ef I ain't, I ain't gwine say I is or ain't. Is dat plain, or ain't it?"—Argonaut.

Westclox

For thirty-five years

BEFORE a ford on a road meant anything but a place to cross a stream, America was ticking off dependable time and ringing people up on the dot in the morning.

For over thirty years this Westclox has maintained two standards—high quality, low price. The price on the tag reads $1.50. It would be easy to make it cheaper. But then we wouldn't care to put the trade mark Westclox on its dial. As it is, it goes on America just as proudly as it does on Big Ben, or any other Westclox.

Crop Insurance
—the 25 Year NEW IDEA Policy

CROP insurance through soil fertilization — protection for the farmer against wasted effort and lifeless soil! Two hundred thousand farmers have "insured" with us — guarded against the steady drain on soil vitality that has made so many acres barren. *You can be insured in the same way*—by buying *the world's most efficient spreader.*

Your Soil Is Your Farm. Build Up Your Soil—and Your 1925 Profits— With a Genuine *New Idea Spreader*

You feed and fatten your beef and pork for market. Your soil too must be fed and enriched — or you cannot depend upon a profitable yield. You must return to your land the rich harvest of chemicals you take from it each year. You must put into it the raw materials that it turns into waving grain and market produce.

Stable manure is the richest and best fertilizer you can use. It is a veritable gold mine for the farmer who uses it properly — the one perfect food for hungry land! The New Idea Spreader makes it easy to apply this life-giving fertilizer in a thin, even blanket so that *all* of its rich elements can be readily absorbed.

The NEW IDEA SPREADER

The New Idea is the original wide spreading spreader — famous for twenty-five years. Each year has seen new improvements added until today our Model 8 New Idea represents the greatest spreader value you can obtain anywhere. The New Idea Distributor insures perfect shredding and wide distribution. Easy loading, light draft, simplicity of mechanism and sturdy construction give you every advantage to be expected in the ideal spreader.

The New Idea Transplanter

Below is the New Idea Transplanter—an up-to-the-minute implement for the truck gardener and grower who wants his planting done RIGHT. With the New Idea the work of setting out your plants can be done in double quick time with a minimum of labor and with the assurance that every plant is set correctly and is properly watered. An exclusive feature of the New Idea is that plant setters sit *up front,* away from the dust and danger of the rear wheels and under the direct supervision of the driver. See this better transplanter at your dealer's —or mail the coupon for catalog.

Our Young People's Forum

Cousin Ruth's Letter

Dear Boys and Girls Who Aren't Yet Forum Members:—Here's an invitation from all of us of the Forum to all of you to come and join us in our good times together. Over and over again I get leters that begin: "Please, Cousin Ruth, tell me how to become a Forum member." So, thinking that some of you boys and girls may want to know the "how" of it, too, I'm right now, before another week passes, going to tell you the way to join our jolly Forum circle. We who already belong rush for our page the very first thing each week and wouldn't give it up for a great deal.

Perhaps your name is William, or John, or Charles,—if you're a boy; if you're a girl it may be Mary, or Anna, or Elizabeth; you may live down a long lane in a big stone house that's way off by itself, or you may live in a small frame house in the mountains or near the ocean; you may even be a boy or girl who lives in a little village or on a busy highway near a large city; whatever your name or wherever you live, we'll gladly welcome you into our Forum circle whenever you want to come.

Any boy or girl who sends a letter, an original poem, or story, a recipe, a drawing, a snapshot, or anything of interest to other boys and girls, becomes at once a member of the Forum.

And don't, please, any of you, be afraid to write me if you want to, I'm one of the crowd, you know, and whatever you want to say, say it. I'm always glad to get letters that are just for me. I never publish these on the Forum page when I think you meant them for me only.

We want to hear about your pets, the tricks you've taught them, your work at home and at school, and all the other things that keep you busy. You probably can't tell all you want to in one letter, but don't let that bother you. Save some for next time; lots of the Forum friends write often. When you're writing, tho, you'll be sure to remember, won't you, that I'm not a mind reader, so you must write as well as you can so that I won't miss anything you have to say.

If you send in a drawing please use black ink—if you haven't any make your pencil drawing on ink paper and I'll ink it in. If you use paper that's just made for pencil the ink chases all around and there isn't much of a drawing left.

Any time you want you can write me at 261 S. Third St., Philadelphia. I'll be there.

Best wishes for your happy times ahead.

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I have been a silent reader of the Forum page for some time. I have written one letter but not seeing it in print I am going to attempt another.

I live on a farm and enjoy farm life very much, especially in summer. I help my father in the fields to harrow, and also pick potato planter. You have to work hard on a farm but you have your pleasure as well. I believe all farm boys and girls will agree.

I am thirteen years of age and have three sisters and two brothers. All are away from home except my younger sister. We have good times coasting.

For pets we have three cats. We call them Malty, Tom and Tabby; two horses named Tally and Nance. Tally is my favorite. How many like to ride horseback? I think it is great sport. I go to the store for mother on Saturday. It is about two miles distant.

I am a member of Cross Roads M. E. Church and attend as regularly as I can. Wake up, York County boys and girls and let people know we're not sleeping.—Dorcas I. Stitely, York County, Pa.

THE YOUTHFUL GEORGE
Hilda Hiddleson, Chester County, Pa.

Dear Cousin Ruth:—I am a girl ten years old. I live in the country and go to a country school. I am in the fifth grade. We have a big farm and have fifteen cows.

I have two sisters and a brother. I have lots of pets, four cats and one dog. Our dog likes you to take a stick and throw it, and then he will run after it. There is lots of snow where we live and I go sleigh riding often. I am trying teach my dog to go sleigh riding with me. When he gets on he falls off. He would rather play with a stick. My dog is brown and white, I will show you a picture of him. His name is Shep.

SHEP
Hazel Thompson, Ulster County, N. Y.

We have a car and two horses. We have three barns and a milk house.—Hazel M. Thompson, Ulster County, N. Y.

Dear Cousin Ruth:—This is my first letter to the Y. P. F. page. I go to school about one mile and a half but I do not walk. We have a stage that comes around every morning and takes us. I have not missed a day this year except when the stage couldn't come around on account of the snow drifts.

I have lots of fun skating and sleigh riding. We live about six miles from town. We have taken Pennsylvania Farmer for almost a year. We had our examinations the twenty-sixth of January.

I am eleven years old and am in the sixth grade. For pets I have a dog and two puppies. The dog's name is Gyp and the puppies are about four weeks old and we haven't given them any name yet. I also have two cats. We have horses, cows and a calf. We have a lot of ice around here. I am sending a recipe of my favorite cake.

CREAM CAKE

3 cups flour
3 teaspoons baking powder
½ cup butter
1½ cup granulated sugar
Yolks of 3 eggs
¾ cup cold water or milk
1 teaspoon orange extract
White of 3 eggs.

Sift flour once, then measure; add baking powder and sift 3 times; cream butter and sugar, add well beaten yolks then flour and water alternately, then extract; beat long and hard and fold in lightly the well-beaten whites. Bake in moderately slow oven (325 degrees F.) for 30 to 35 minutes.

Wishing Forum friends and Cousin Ruth good luck.—Amelia Lotysh, Mercer County, N. J.

Dear Cousin Ruth:—May I drop in and have a little chat with you? I was here a few times before and I promised to come again, so you see I must keep my promise.

I love to read your page. It is very interesting to read about our Forum friends.

My cousins are coming to see me this summer so I will persuade them to write and become Forum members. I hope you will welcome them. We expect to have good times this summer. Also, we will go hiking.

I also love to read books and I like to draw. That reminds me, I have two drawings here, one from my brother Charles and one from myself. I hope they will be printed.

Well, I must say good-bye for a while. I will come and see you another time when the birds will be singing and the flowers will be blooming. Three cheers for Cousin Ruth and Forum friends!—Helen Mendla, Bucks County, Pa.

It will be nice to have your cousins join us, Helen. Forum friends will be glad to hear from them.

Dear Cousin Ruth and Forum Friends:—I have been reading the Forum ever since we started getting Pennsylvania Farmer and I surely do greatly enjoy it. Say, boys and girls of Lackawanna County, why don't you wake up? All the other boys and girls have got us beat. I have never seen any letters from Lackawanna County, so I thought I would write and start out and maybe some of the others would write also.

I am twelve years old and in the seventh grade. I go to the Greenfield High School, which is about three miles from my home. I do not walk; we ride in large wagons, but, of course, we don't always ride in wagons because when there is snow on the ground we go in sleighs.

I love to go coasting down the hills and skiing. Don't you, Cousin Ruth? I suppose most of the Forum friends do. Cousin Ruth, I have asked some of my friends to write also if you don't mind. If my letter is not published I will try and write again until I succeed. Next time I write I will send in a picture of myself and my pet pup, if I may. I will tell you of my pup the next time I write. I will close before my letter gets too long.—Dorris Petrylak, Lackawanna County, Pa.

You, your friends and pictures are always welcome, Doris. Let's hear about the pup.

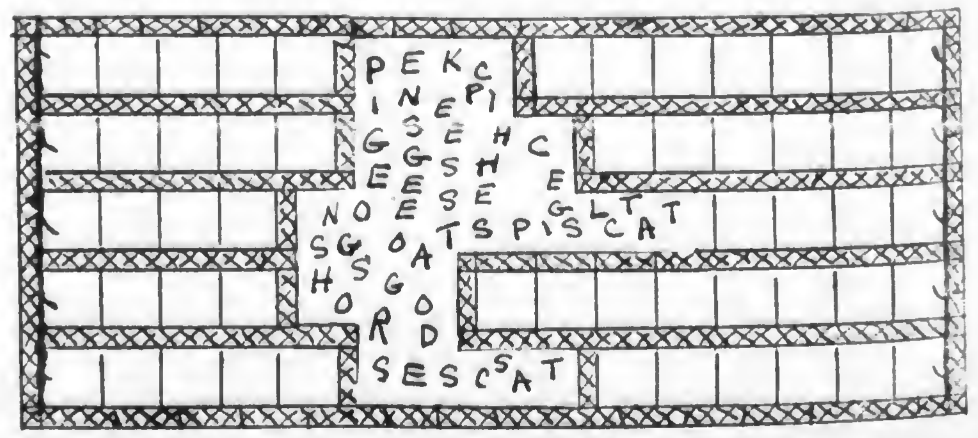
OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—One sunny day this March Pa Farmer let all his farm animals out in the barnyard. Suddenly a big windstorm came up and all the animals were whirled about so that he is asking you to help put them back into their places. You see the white squares all ready waiting for the animals. You can help Pa Farmer out of his difficulties and solve this puzzle if you will fill the white squares with letters from the mixed-up group of letters in the middle of the picture. Each group of letters will form the name of a farm animal you all know. When you have found the answer send it to me on a POSTAL CARD not later than March 14—that's certainly late enough for those animals to be whirling about, isn't it? BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

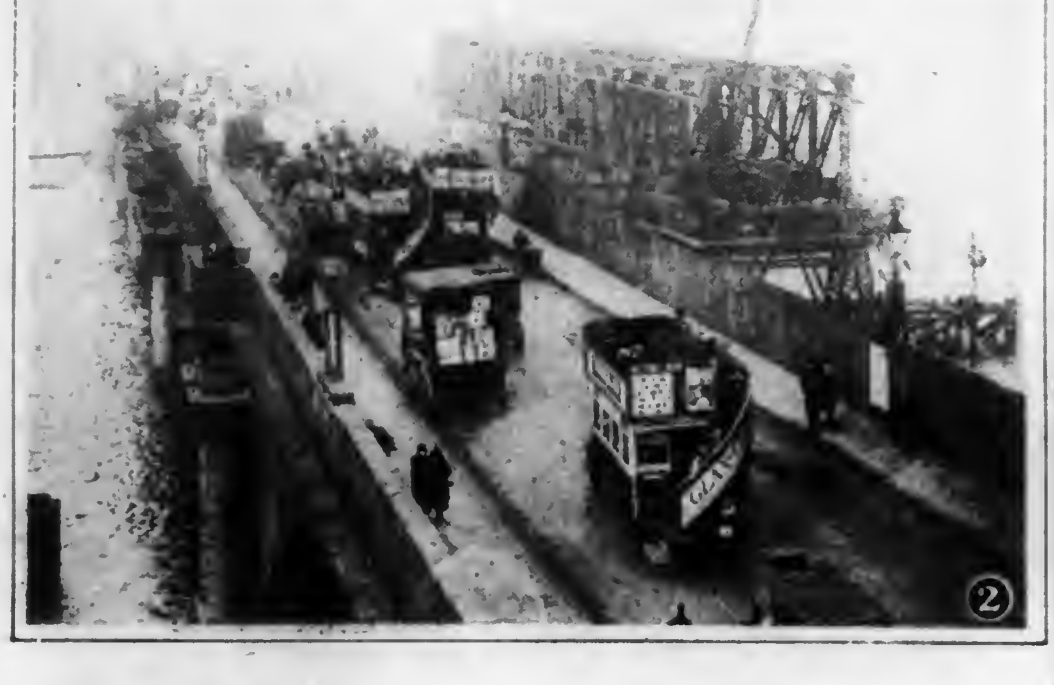
Puzzle Prize Winners

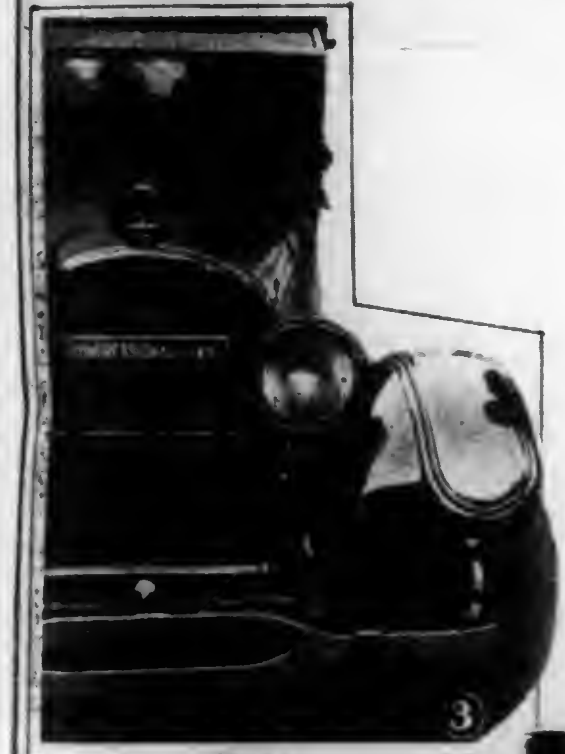
The answer to the puzzle published in the February 14 issue of Pennsylvania Farmer is: VALENTINE GREETINGS TO ALL OUR LITTLE FOLKS.

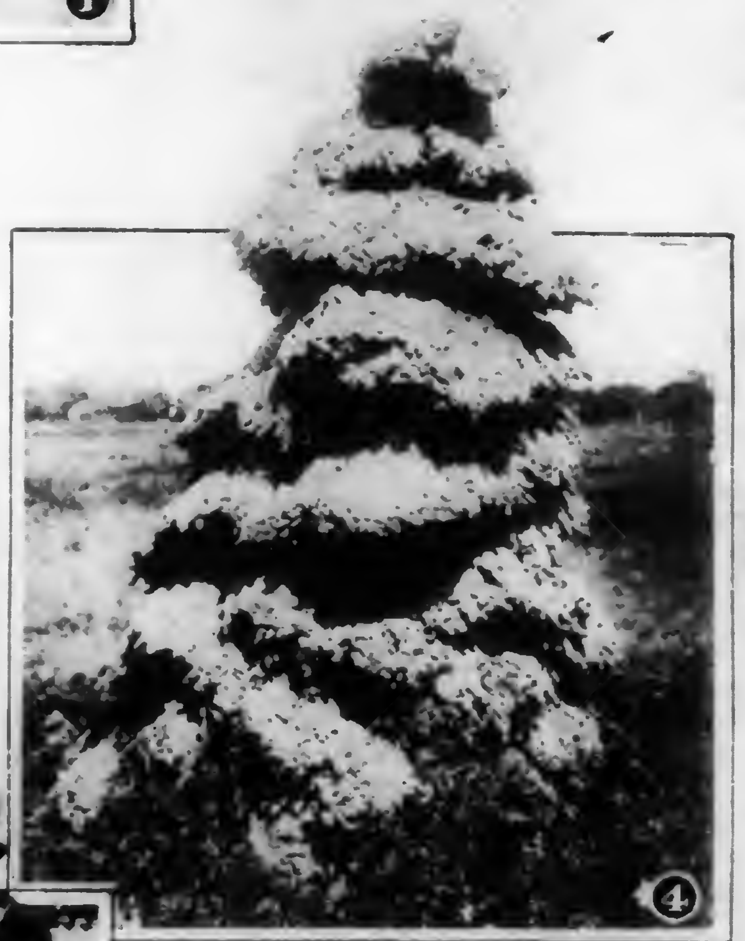
The prize winners are: Ella Mae Esbenshade, age 9, Paradise, Pa.; Margaret Haag, age 9, Olivehurg, Pa.; Leslie Jackson, age 9, Lucinda, Pa.; Mildred Mounts, age 7, Washington, Pa.; Stella Porch, age 8, Acme, Pa.; Lewis Smith, age 8, Easton, Md.; Mae A. Stahley, age 6, Neffs, Pa.; Boyd Strunk, age 8, Zionsville, Pa.; Harry K. Witmer, age 9, Bird-in-Hand, Pa.; Harold H. Ziegler, age 8, Schwenksville, Pa.



PASSING EVENTS IN PICTURES







(Copyright by Underwood & Underwood)

1.—The Dawes children, Virginia and Dana, take up their home in Washington as the General becomes Vice President.
2.—"London Bridge is all built up"—not really all, but they are making progress on the temporary structure by the side of the old Waterloo Bridge.
3.—Congressmen decorate their cars with special tags of the sort in the picture.
4.—Sluggards, please pause! The population of this sky-scraper of an ant-hill is at least half a million.
5.—This full-blooded Cherokee Indian is a practicing osteopath in Chicago and prominent in politics.
6.—The Earl and Countess of Coventry recently celebrated their diamond wedding. The Countess, tho over eighty years old, still rides her tricycle. The Earl is "father" of the House of Lords.
7.—Nicholas Cartus, inventor of a type of airplane motor which is exciting interest in the War Department.
8.—The thin film—only 254 thousandths of an inch thick—which Miss Barton, of the Bureau of Standards, is demonstrating is used in X-ray research work.

March Blows in Annual Task

Our Spring Housecleaning Can Easily Be Simplified

IT IS March, and that specter, housecleaning, has time and again appeared before me, warning me of my impending doom. To outwit the apparition, I have laid some deep plans and even now I have begun to execute them.

While I debated where to begin, a shabby iron bed caught my eye. It was my answer. Housecleaning and house renovating go hand in hand. A change of curtains, diligent use of soap and water, and the putting down of seasonal rugs, are all part of the same piece of work.

Better Now Than Later

I knew that bed could and should be enameled now, without waiting till May when the lawns must have attention, as well as the house. Windows can be raised at any time of year to eliminate the odor of paint.

Having decided on the bed as a beginning, I alertly moved from garret to cellar with pencil and notebook in hand like a grocer's clerk, taking inventory of the work that might be done before the soft lazy days which April brings.

The two garret rooms were in gratifying order. Note: "The three white curtains must be freshly laundered and hung, the floor painted brown."

On the Third Floor

An inspection of the two third-story rooms brought this entry: "Third-story rooms must be papered. Paint the wood work. Make cretonne draperies of material having a light background and gay flowers."

This notation settled the fate of the "blue room"—used only in summer: "Completely clean this room early. Shellac the floor. Hang the new window draperies (these have been made)."

When I passed on to a one-windowed room. Note: "A white net curtain for 'Margaret's room' with cretonne valance." The stairway and porches needed no inspection; their shabbiness had weighed on my mind. This note was written: "Paint scarred white rises in front stairway and paint or stain (light walnut) dining room stairway. Paint the porches gray."

And in the Kitchen

Another entry ran: "Make blue voile drapery for the door between the dining room and living room," and yet another, "Paint the kitchen French gray." We have finished putting this shade on the refrigerator, which we do not use in winter, and have white-enameled its interior.

Then the bed room drawers and the buffet drawers and closets. What an uninteresting task they are in warm, moist spring, when one's vitality seems amazingly low. Even now several of ours are shiningly clean and the good work is going on.

A Little Each Day

You will say, "Well, some of these closets, etc., will need another going over before spring." Some may, but by adding almost daily some little bit of this extra work, our house cleaning is progressing satisfactorily, and when May comes, much detail will have been eliminated.

There are other plans galore, but if we can wrestle successfully with these of the precious note book, we shall deserve laurel wreaths.

It can be done. Take house cleaning by the forelock.—E. O. J.

Good Times Indoors

THE stormy days of winter and early spring tax the ingenuity of mothers to provide indoor amusements for the kiddies. The other day, little son ran across the road to a neighbor's to play and came home with his pocket filled with paper chains. Since then, he has spent many happy hours making them.

Any bright paper will do,—old wall paper books are good. Cut the paper in strips about six inches long and three-quarters of an inch wide. Loop them together and fasten ends with paste. Of course, the chain-maker gets pasty; but there are not many things a very small child will do without getting dirty or mussy.

Little Folks Like to Color

Colored crayons, old catalogs, or magazines, blunt scissors, carbon paper, all help. One will often be surprised to see how well small children will color, cut and mount pictures. Larger ones can trace with carbon paper and color.

Little girls, only six or seven years old, will get lots of fun dressing little dolls about six or eight inches high, that can be purchased for ten cents. They will also do very creditable outline or simple cross stitch embroidery.—Mrs. P. W. L.

A Renter's Difficulty

THE article about the electrically run farm makes me want to "tell the world" how women on rented farms have to contend with inadequate equipment. While much is said about helping the farmer and keeping the boys and girls contented, I never see anything about the landowner being under obligation to give comfortable, pleasing living conditions to his tenants.

Our boys and girls often say when they come home from some other homes, "I wish we could have a phone, electric lights, bathroom or furnace" etc. We see them becoming dissatisfied with home, and are powerless to change conditions, because we do not own the farm.

Obligation Rests with Owner

Many farmers in this class start farming practically with nothing except debts. It takes courage to do it, too. If there is a family to raise there is little chance to ever buy a farm of one's own, however much we would like to provide comfortable homes for our children.

If one man is wealthy enough to own his home and more, is he not under obligations to provide modern homes for those whom he expects to do all the hard work connected with his farm? Not as fine as his own home, but plain, convenient comforts. —A. S.

WAFFLES

1¾ cup flour
1 teaspoon sugar
½ teaspoon salt
½ teaspoon soda
1 cup sour cream (or sour milk with ¼ cup butter)
3 eggs, yolks and whites beaten separately.—Mrs. H. W. B.

Education in Food Values

The Use of Dairy Products Points Way to Health

THE Philadelphia Inter-state Dairy Council is really a more wonderful organization than the average person realizes. It not only stands with and behind the dairyman, serving as a stimulus toward better grades of milk and better standards of dairying, but it supplies a far-reaching education in food values, health and the adequate use of dairy products.

This Philadelphia branch is, of course, connected with the National Dairy Council, but it is quite independent, nevertheless, adopting such methods as are best suited to the particular needs of its territory.

It is most interesting to learn of the many kinds of work the Council conducts. For the woman interested in nutrition, there are the demonstrations of cookery, food values and hygiene given by nutrition experts at parent-teacher meetings and similar gatherings. There are supper clubs (like the one shown in the picture) where the group learns food values thru food selection and preparation. There are lectures, with and without lantern slides, which the teachers in school may give in correlation with the study of geography. Last, but by no means least, there are the very amusing, pleasing, and instructive health plays.

The work is entirely supported by a small percentage assessment paid by milk producers and distributors. Once in a while a school does charge admission to a lecture or a health play, when a fund is being raised for some special purpose, but it is always understood that none of the money goes to the Dairy Council.

Study Made Enjoyable

The Council employs only trained and talented workers. The education in food values which they give, tends in itself to encourage a greater demand for farm products, be they milk, fruit, vegetables or poultry products. A lot of health ideas get tucked away in the little stories for children, food demonstrations for mothers, supper clubs for girls, and health plays for everybody.

People are like the little boy who prefers to take his pill enclosed in a spoonful of jelly. They like to learn the facts of health thru pleasant channels, rather than as cold facts from the doctor. So the Dairy Council is helping to spread the gospel of positive health. The goal is not just to escape illness, but to be radiantly well thru keeping to the health road.—Effie Maurine Paige.

An instructive meeting of one of the supper clubs conducted by the Philadelphia Dairy Council.

The Prize Contest Awards

THE contest "Who shall hold the purse strings" is closed. By vote of 104 of our readers the first prize goes to Mrs. Edith Gratias, Perkasie, Bucks County, Pa.; second prize to Mrs. F. D. Stewart, Medford, Burlington County, N. J.; and third prize to Mrs. Mary W. Eck, Richland, Lebanon County, Pa. We congratulate the winners and thank the voters.

No doubt Our Family will want to see the prize winners face to face. Since a real family get-together is impossible, we have asked the three who won to send us their pictures and a short introduction of themselves. Look for these in an early number.

The best suggestion for our page

The contest editors feel that the suggestion which best embodies all the good features of the many that were submitted, is the discussion suggested by Elma Stage, Clearfield, Pa.: "If I had two extra hours each day to devote to the interest of the home, what would I do with it?"

Our Family will agree that this offers opportunities for discussion that will keep us busy for some time to come.

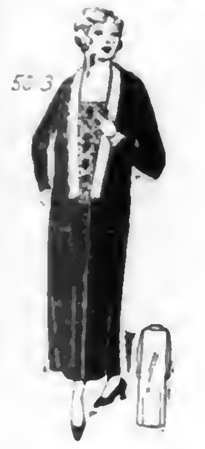
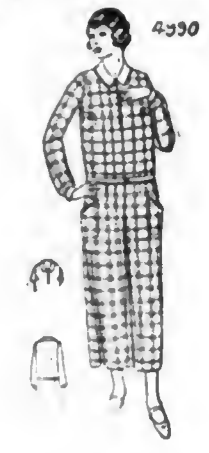
Just a Few Words to the Wise

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5013.—A Good Looking Frock.—Taffeta or faille would be very attractive for this design. As here portrayed facings of white satin are shown, with lace over chiffon for the vest. Eight sizes. Bust measure 40, 42, 44, 46, 48, 50, 52 and 54 inches with corresponding waist measure, 33, 35, 37, 39, 41, 43, 45 and 47 inches. The width at the foot is 1 5-8 yard. To make the dress as illustrated for a 44 inch bust will require 4 5-8 yards of one material 40 inches wide, and 1-2 yard of contrasting material for the collar and cuffs, and 1-4 yard of chantilly or other lace all-over 20 inches wide. Pattern 10c.



5013

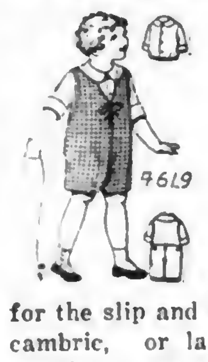


4990

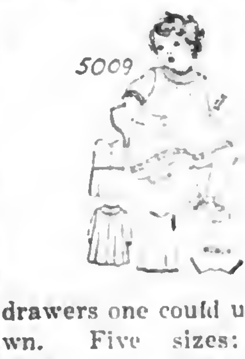
4990.—Pleasing House or Morning Frock.—Plaid, gingham and rep are here combined. The model is in slip on style. The sleeve may be in wrist length, or, short as in the small view. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size made with long sleeves requires 4 5-8 yards of 36 inch material. Collar and sleeves faced with contrasting material as illustrated require 3-8 yard 36 inches wide. If the dress is made with short sleeves, it will require 4 3-8 yards of material. The width at the foot is 1 5-8 yard. Pattern 10c.

4619.—A Neat Play Suit.—This model provides a separate blouse. The overalls are sleeveless and the body portion of the back is buttoned to the waist portion. Seersucker, denim, or gingham could be used for the overalls, and cambric for the blouse, or the entire suit may be made of one material. Four sizes: 2, 3, 4 and 5 years. A four year size requires 1 1-2 yard for the overalls, and 1 1-8 yards for the blouse. Pattern 10c.

5009.—A Comfortable Outfit for a Small Tot.—Voile, dimity, crepe, silk and chambrey are good materials for the little dress here portrayed and



4619



5009

for the slip and drawers one could use cambric, or lawn. Five sizes: 6 months, 1 year, 2, 3 and 4 years. A 2 year size requires 3-4 yard of 36 inch material for the drawers, 1 1-8 yards for the slip and 1 3-4 yards for the dress if the dress is made with long sleeves. If made with short sleeves 1-4 yard less is required of 36 inch material. If slip is made without ruffle 1-8 yard less is required. Pattern 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 book of fashions.

Her Jams in Demand

ON HER farm one woman earns money by making and selling jams, jells, dainty salads, etc., in fancy molds for banquets, weddings and various other social affairs, large or small, where attractive tray and table serving is a feature.

She purchases attractive individual aluminum molds, as she needs them, to carry out some special occasion or day, in color and shape schemes, and makes fancy jellies, such as green mint jelly; red raspberry, amber with orange and combinations. She also makes fresh grape, apple, blackberry, strawberry, cherry and raisin jams and jells as the season and customers call. She cans varieties of fruit juices for her jell cupboard.

Her salads are in great demand, any of which she sells and sometimes delivers, at from 10c to 25c a mold. For dozens or hundreds of molds, she makes slight reductions in price.—Kan.

This oil range has *focused heat*!

THE heat given by the burners of the Florence Oil Range is concentrated right on one spot—right on the bottom of the pot.

This *focused heat* saves your time, for everything cooks quickly when the heat stays where you want it.

It is cheap, for fuel is not wasted when the heat is *focused* on the center of the pot—cheap fuel, too, kerosene, and used only when actually cooking.

Cut-away view of the Florence burner, showing how the heat is focused right on the cooking vessel.

You get the best results, for you can have any degree of heat you need—from intense to simmering—always *focused*—regulated by the turn of a lever.

When you are ready to begin cooking, the Florence is ready for you. Just turn the levers and light the burners. The Florence burns a gas-like flame—it is not a wick flame, such as you see in an ordinary oil lamp.

The famous Florence Oven, with the "baker's arch" and patented heat-spreader, assures even baking. Pies and cakes come out evenly baked and delicately browned. Meats roast to exactly the right turn. There is a heat indicator on the oven door which shows exactly how much heat there is inside.

Ask at the store to see the Florence Oil Range. You will be struck by its shining beauty and sturdiness. See it in action—then ask yourself if you can do without this oil range with its focused heat.

Just for Curiosity

If you are curious about the results that come from using Calumet—bake a cake and use some other baking powder, then use the same recipe and employ

CALUMET
THE WORLD'S GREATEST
BAKING POWDER

Compare the texture of the two cakes—the way they look—the way they taste. The difference will cause you to join the millions who use Calumet daily. You will then realize why it is called the most economical of all leaveners.

Never any losses—no last moment disappointments where Calumet is used—everything is always baked "just right."

Don't buy an unreliable brand of baking powder simply because it costs a trifle less than Calumet—it only means false economy. Never touched by human hands Calumet comes to you pure, wholesome and positive for results.

EVERY INGREDIENT USED OFFICIALLY APPROVED BY U. S. FOOD AUTHORITIES

Sales 2½ times those of any other brand

THERE IS NO SUBSTITUTE FOR CALUMET

Those Doctor Bills Again

Sickness is So Costly That It Pays to Keep Well

MRS. MUMAW'S article on consulting the doctor is undoubtedly true, but there are many farm women who are unable to follow this advice even tho they realize the value of it.

Doctors' charges seem to be mounting in proportion to the falling prices of farm produce. Our town has a new physician, and as he is a young man, we had hoped for a release from former high prices. However, we find that in many cases his prices are double that of the older doctor.

Twelve Bushels of Potatoes

A farmer six miles away phoned to ask him if he would come to see a patient, and asked how much he would charge. The reply was that if the farmer would carry him both ways, the doctor would come for six dollars. That means twelve bushels of potatoes when sold at stores in his town, or three-fourths of a ton of hay in the barn.

A neighbor's little daughter had an attack of indigestion. The doctor from the village five miles away was called. He drove his car, as it was a nice fall night before midnight. His call was only a short one. His charges were ten dollars.

A farmer on the cement road who had bought a nice farm on a down payment was having a hard time to hang on to it and keep up payments. He had to go to the hospital. The bill staggered him and he didn't see how he could pay it. He tried to get the town to pay it, as could have been done had he been a poor non-taxpaying foreigner. There was a great to-do about it among some of the taxpayers, but I do not know how they came out.

Perhaps doctors are justified in charging such prices, but when farm products are at their present level many farmers must avoid medical services if possible. Surely there is something wrong when the doctor's bill causes as much worry as the illness itself.—Mrs. E. M. C.

EDITOR'S NOTE.—There is one way of helping to meet this problem (which is a very real one), and that is by increasing our knowledge of how to prevent disease. It is true economy to go to the doctor while we are seemingly well, and let him prescribe rules of health for us, instead of breaking the rules and suffering the consequences until the doctor must make us a high-priced emergency call, perhaps too late. We don't wait until our car falls to pieces before taking it to the repairshop. It would be an expensive plan.

Braided Rugs

CUT strips of cloth about one inch wide. Thick goods must be cut finer than the thin pieces. Fasten three strands together and braid, turning in all raw edges. Always draw the strands firm and hard. When enough has been braided, start sewing around and around either in a circle or an oblong, being careful always to keep it flat. Any rags can be used. Woolens make very nice rugs and can be mixed in any way desired. A hit and miss rug is nice, but if one selects colors with care, very pleasing effects can be had. In making braided rugs practice is your best teacher. The firmer the braid the more satisfactory will be your rug. A firm rug will lie on the floor better, and will not be so easily disarranged. Always use strong heavy thread to sew the rugs.—A. S.

Keep the Buttons On

DON'T let there be any gaps from missing buttons in the wraps your children wear for school! We lived for forty-five years three-eighths of a mile from the school house. Past our house came children from seven dwellings below us in the district,—some of them over a mile below. Always in cold weather the children stopped at our house in the mornings on their way to school, and many a frosted foot have I thawed out and many a tear have I wiped away. Most of those children were well protected except for the missing buttons that left the coat or sweater partially open.

Many a missing button have I replaced before sending the children on. Yes, and some of the mothers flew into a rage at the implied criticism. Others, overburdened with their many cares, thanked me for giving them a lift.

She Learned Her Lesson

The last few years there were twelve children who passed on their school-ward way, and some of them always stopped winter or summer, going and coming. One cold morning a young girl came in with one cheek and ear badly frozen,—a livid white. I thawed them out and then I scolded her. For it was all her own fault. She was at that age where many girls think they must do as they please. I knew her mother wanted her well bundled, and I also knew there was plenty to bundle with. I think this girl had her lesson, for she had quite a sore face and ear for some time.

We looked daily for our children. No one can tell or imagine how we missed them after we left the farm, for now we seldom have a child call, unless it is someone from our former home.

We always held out a bait for them in the way of flowers or fruit, or sometimes home made candy. Anyway they never failed us.—Clarice Raymond.

Tea in the Percolator

IN ANSWER to the question of using the same percolator for brewing tea and making coffee, I don't think it would work well very long. Try as I will, my coffee percolator will retain the coffee stain.

Once when I was obliged to make tea in a polished copper coffee pot, the tea not only lost its color but its flavor also, tho the pot had been thoroly scoured and scalded. Personally, I like tea brewed in an earthen pot, tho I think a special tea percolator would be fine.

Just now I am using an aluminum tea pot and an aluminum coffee percolator. Both are washed and scalded every day, and when the weather permits they are turned upside down to drain outdoors in the sunshine. It may be imagination, but I always think the tea and coffee taste better afterwards. We don't drink warmed over coffee or tea.

My son's wife has a new aluminum tea pot which makes delicious tea. The pot is first scalded out, then boiling water is poured into it. Then the tea, in a round, perforated ball, is dropped into the water from a chain. This is all done just as we are ready to sit down to a meal. By the time we are all seated, the tea is ready to pour.—A Reader.

—Hundreds of—
Farmers

during 1924 secured loans through this Bank, which enabled them to buy a farm, lift present indebtedness, or get more out of their land by securing new implements and making needed improvements.

"The Mortgage That Pays Itself Off"

made it easy for them. You can do the same thing. Easy semi-annual payments for 33 years—and the farm is clear. Straight 6% interest plus 1% reduction of principal each year.

Operating in Pennsylvania and Maryland.

An Important Question

THE Primes, parents of moderate means, had been compelled by economic reasons to leave the farm and go to live in a factory town. Yet they chose their home on the edge of town and near the surrounding woods and pastures for the sake of their children. Often on Sunday afternoons one might see either or both parents go for a walk with those lively boys and girls—and those walks generally led out of town, off the sidewalks out on the country roads and lanes.

It is no wonder the Prime children had the best times in the world playing in caves, building houses in trees, and exploring every uninhabited bit of land within several miles. Not surprising, either, that they came to know birds and flowers and squirrels almost as well as Hiawatha did.

And it is quite natural that the majority of the young folks in that family have chosen to make their homes, earn their living, and even enjoy most of their pleasures in the real country. Their parents taught the genuine "back-to-the-land-ism."

On the Other Hand

In a similar town nearby, there grew up another family who had left a farm for similar reasons to the Primes'. But somehow the Birds grew up with their faces toward Main street while the Primes faced the open fields and the woods. Yet we wonder why Sue Bird is not happy since she married a farmer and began keeping house a half-mile from neighbors!

Now the problem is how to change Sue's attitude for her own sake, as well as for her husband's sake and in the interest of their children. The friends to whom she confides her woes have suggested flower-gardens, raising little chickens, new lines of reading, and clubwork—but with no apparent success as yet.

I wonder if any readers of Pennsylvania Farmer have had any experiences in finding the delights of farm life that they would be willing to share.—V. M. B.

On Gray Days

MY "CARROTS FOR CHEER" recommended by Our Page, are started. The children also love to watch a sponge kept wet in a saucer if each tiny hole in that sponge is filled with mustard seed. They won't need to wait long for results.

If you have never planted a fernery with grape fruit seeds, do it at once. You will be rewarded by beautiful foliage.

In one of your pretty glass vases or jugs put a healthy sweet potato and keep the water fresh. Shortly you will wonder where next to fasten that vine!

A low bowl full of interesting growth can be attained by cutting a generous top off a turnip, carrot and parsnip and keeping fresh water in the bowl.—G. S. S.

A Correction

IN THE article entitled "Home Millinery Take Note" in the February 14th number, a line was omitted in printing. The directions should read: "For a smaller head size than a twenty-four-inch one, take off half the extra amount at either end. Make a flat seam, slip-stitching it on both sides." The words, "the extra amount at either end" and "Make" were left out. We regret the puzzle this must have been to our readers, and trust that nobody made it a cross word.—I. S. H.

Zinc Insulated

NATIONAL FENCE

The superior quality of Zinc Insulated National Fence and Banner (formerly Arrow) Steel Posts has long been proved by the only real test of fencing—time and service.

Zinc Insulated National Fence, each wire with its heavy coating of zinc, uniformly applied, to resist rust, has successfully withstood all kinds of weather conditions.

Banner Steel Posts, with their railroad rail design, and large slit wing patented anchor plates, root firmly into the ground, hold the fence securely in line and give many years of service.

Both are sold at NO EXTRA CHARGE. Together they offer the most economical and most dependable fence you could own, giving many more years of service at lower cost per year. Ask your dealer.

When That Barn Needs a Roof

Things to Think about Before Buying the Materials

FARM buildings are no better than the roofs which cover them. Painting and repairing are the chief items of expense in maintaining a building, and it is always poor economy to allow a building to stand with a leaky roof as it soon rots the sheathing and rafters and damages the contents of the building.

Slate is one of the most permanent roofing materials and it is cheap in the end for the more important buildings, such as the dwelling and the barn. However, it is often inadvisable to renew the roof on an old building with slate. At the present time, slate is most expensive in first cost, due to high freight rates. It is also a very heavy roof, and must have a substantial and strongly braced frame to support it. Asphalt, red cedar shingles and sheet steel are preferable for sheds and other small buildings, and when properly applied and cared for these materials give good service for many years.

Shingles Must Be of Good Quality

Only the best grade of shingles should be used. Shingles made from inferior wood are always unsatisfactory, as they split easily and their term of service is only a few years. A building need not be closely sheeted for shingles as they can be placed on lath or narrow sheathing boards spaced several inches apart. Not more than five inches of each shingle should be exposed to the weather, and particular care should be given to laying them, as the joint between two shingles should be at least two inches to one side of the joint in the next lower layer.

Zinc coated nails are most durable for shingling, galvanized nails next. Unprotected iron nails should never be used as they soon rust and break, thus loosening the shingles.

Cedar shingles are packed in bundles, each containing 250 shingles. They are sold by the thousand (four bunches) and from 750 to 800 shingles are required to lay a square (100 square feet) of roof. About six pounds of zinc coated shingle nails are necessary for each square of roof. The weight of a shingle roof is about 150 pounds per square.

Steel Roof Is Easy to Lay

Sheet steel roofing is light in weight and can be laid on lath as well as on sheathing. Anyone who can use a hammer can roof a building with steel and make a short job of it. Steel roofing should not be thinner than twenty-six gauge. The thin grade of steel, twenty-eight gauge, is entirely too thin to make a permanent roof. Galvanized steel is more expensive in first cost than black steel, but it will not need painting for several years, while the latter should be painted on both sides before it is used, and the upper surface protected by an additional coat of paint at intervals.

The best grade of galvanized roofing will begin to rust in spots after nine to twelve years, and should then be painted the same as black steel. Steel roofing will not last as long in cities, or in the vicinity of railroads, or factories, as it will in the open country, because of the corrosive action of the smoke-laden air.

The main factor in the ultimate cost of this type of roof for farm buildings is the necessary painting. If the farmer can do his own roof painting the cost of labor can be eliminated. If the job is delayed for a few years after the roof commences to rust the owner may become suddenly aware that he needs a new roof, instead of a coat of paint.

Asphalt Roll Roofing Is Popular

There are many different kinds of asphalt roofing on the market and probably more of this kind of roofing is used than any other. Some of it has a smooth surface, and some is coated with crushed slate or grit, firmly bedded in a layer of asphalt. The slate surfaced roofing can be bought in red or green and it makes a handsome, durable roof.

Asphalt shingles have become popular in recent years, particularly for roofing dwellings. These shingles are cut eight by twelve inches and when laid four inches to the weather on smooth sheathing make a very satisfactory roof. Both roll roofing and shingles should be used on smooth matched sheathing for best results. The laps of roll roofing should be carefully cemented before nailing, according to the manufacturer's directions, to insure a waterproof roof. The roll roofing weighs from fifty to eighty pounds per square, and slate surfaced shingles about 240 pounds per square.

Probably the best paint for steel or composition roofing is the regular black roof paint known as asphalt roof paint.

If You Prefer Red Paint

Those who prefer a red roof can buy ready mixed roof paint of the desired color, or they can use Venetian red and linseed oil. The latter makes a fair grade of paint for steel roof when mixed in the proportion of one gallon oil, six pounds Venetian red and one-quarter pint dryer. This paint settles readily and must be thoroly stirred at frequent intervals.

Two coats of paint on a steel roof which has begun to rust are probably more economical than one coat, as they form a thicker layer which will protect the surface for several years. If the roof is very rusty and scales have formed on the surface it will be necessary to scrape the roof to remove the scales before painting. If paint is applied over these scales of rust they will eventually come off bringing part of the paint with them, and exposing the roof to further rusting. A wide hoe is suitable for this purpose, or a wider roof scraper can be made from an old saw or other piece of sheet steel.

Ladders for Steep Surfaces

A ladder or roof board must be used on surfaces too steep to walk on. A strong iron hook can be made to hook in the top of the ladder, and the other end turned down at least ten inches to hook over the comb of the roof. A leaf from an auto spring or heavy wagon spring makes a satisfactory ladder hook. If two ladders are available for use on the roof a better plan is to tie the ladders together at the top with a strong piece of rope and let one lie on each side of the roof.

Starting from the comb, the painter covers the farther side of the roof, then from the comb down to the ladder at the eaves, where he hangs his bucket; then sitting on the comb of the roof, the ladders can be moved over and another strip painted. It is a good plan to begin at one end of the room and paint to the center, then move the ladders to the other end and paint back toward the center, covering all but one strip directly under the ladders. This can be left until the paint has set, when the ladders can be moved over to a painted strip without rubbing the paint, and the roof can be finished.

New Roof Cheaper Than Repairs

Slate-coated asphalt needs no paint. Whether it will pay to paint smooth surfaced asphalt roofing is an unsettled question. If two or more coats are applied while the original surface is still sound, the life of the roof will undoubtedly be lengthened. If the surface has become dry, rough and furry by long weathering, it is difficult to build up a protective surface, as the paint soaks into the roofing, and the surface decays almost, if not altogether, as fast as if no paint had been applied. This refers to the common grade of asphalt roof paint. There are other grades advertised as patching cement, which are guaranteed to stop holes in roofing, and these might be of service in renewing an old, badly weathered roof. However, at the present low price of new roofing, it is a question whether the new roof might not be cheaper than the repair of the old.—J. R. Marsh.

The Possibilities of Borax Injury

THE following correspondence with one of the American potash manufacturers may be of interest to the readers of Pennsylvania Farmer.

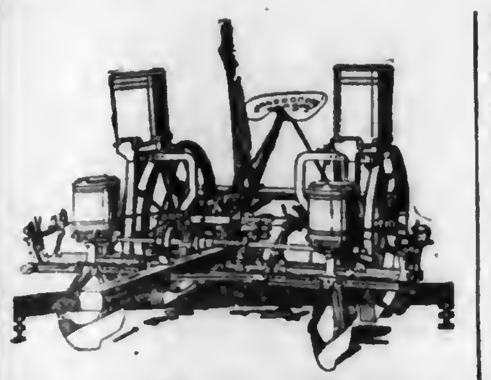
"The Dominion of Canada issued a ruling in their laws of 1922 stating that no person shall offer for sale in Canada any fertilizer which contains more than one-tenth of one per cent injurious borax, or any other constituent poisonous to plant life when applied to the soil.

"As you know, we are producing a potash which will average around fifty-eight per cent potash and we are guaranteeing the borax content not to exceed one-half of one per cent, and we also understand that it is an unwritten law that complete fertilizers going to the farmer, if containing more than two pounds of borax per ton, must be labeled that they contain more than two pounds of borax, also that straight potash should not contain more than one-half of one per cent borax. However, Canada is holding that in the case where any ingredient of fertilizer, such as potash is used directly as a fertilizer, it must not have more than one-tenth of one per cent of borax—or, in other words, where potash is applied directly to the soil, they do not allow more than one-tenth of one per cent borax.

"We are taking up with the Department to try and get them to change this ruling and, as you have written us that you think, if our potash contains one-half of one per cent, or less, of borax, that it can be used with safety, if you will kindly write us a letter outlining your views in this matter in order that we can submit evidence to the Department of Canada, we would appreciate it very much indeed."

The Real Safety Limit

In reply to yours of the 23rd inst., I am willing to state that the safe limit for borax applications has been set at five pounds per acre. Under some conditions as much as fifty pounds per acre might be applied without serious injury to the crop. This would mean heavy soil and abundant rainfall. As already noted, however, the Agricultural Experiment Stations and Departments of Agriculture should not encourage the use of materials that would contribute in any ordinary practice more than five pounds of borax per acre. Material containing as much as one per cent of borax could, therefore, be used at the rate of 500 pounds per acre. That amount should not be exceeded. Material containing one-half of one per cent borax might be used at the rate of 1000 pounds per acre.—J. G. Lipman.



Keep Your Corn Crop Humping

Use the accurate John Deere 999 planter with fertilizer attachment—get an ear for every kernel you plant—hasten growth—have the crop ready for harvest early.

JOHN DEERE
No. 999 Corn Planter

The No. 999 handles up to 700 pounds of fertilizer per acre. Can be checked or drilled while corn is planted. Fertilizer does not come in contact with seed—no danger of firing.

The No. 999 drops the desired number of kernels in every hill. Instant change in drop to 2, 3 or 4 kernels per hill. Instant change to drilling and back to hilling. Nine drilling distances obtained without changing plates. Pea and bean attachment extra. Automatic marker. Underhung reel. Sold by John Deere dealers.

Get the big yields that come with unfailing planting accuracy and proper distribution of fertilizer. Write for free booklet. Address John Deere, Moline, Ill., and ask for Booklet AH-636

THE AKRON LAMP CO. 193 Iron St., AKRON, OHIO

Steel Eclipse Windmill
Runs in the Lightest Wind
Self-Oiling

THE Fairbanks-Morse Steel Eclipse Windmill is designed differently and built differently. No expense has been spared to make it the most advanced mill of the day. Working parts are few—mechanism simple. All parts are enclosed in a dust-proof cast-iron case. No possible chance of dirt, snow or sleet to blow in and overflow the oil. Working parts and bearings are made of highest quality material; drop-forged crankshaft with turned, ground and polished surfaces; finished worm gear and pinion with machine-cut teeth. Every part running in oil, with no chance for a groan or squeak. A regular high-grade machine precision job throughout—no rough cast spur gears used, as is common practice in many mills.

Simple all-metal construction throughout—built for a lifetime of service. Has quick downstroke with slow lift—which means actual pumping two-thirds the time. Wheel is tilted to take advantage of lightest wind. Speed is self-regulating. Costs no more than the ordinary type of windmill. Sizes 8 ft. and larger.

Let the local Fairbanks-Morse *authorized* dealer show you the many remarkable features of this windmill, or write to us for latest descriptive literature. Sent FREE without obligation to you.

THE E-B LINE

Better Planting—Bigger Yields

Your seed may be fertile, but if your planter is old and inefficient your yield is reduced. An E-B No. 32 PLANTER is the one to use for sure, even, uniform planting. No skips, no crowding, cracking or clogging.

The E-B Planter is absolutely accurate, can be set to drill or check out, is sturdily built of best materials and gives efficient service for many years. Light draft, with comfortable seat—it is easy on horse and man.

* * *

When cultivating starts use an E-B CULTIVATOR. You will be surprised how easy it pulls, the efficient way it gets out all the weeds and the thorough loosening of the soil for rapid plant growth. The *E-B No. 48 Cultivator* is especially popular. Equipped with combination wheel-guide and gang-shift, it is remarkably flexible, working equally well in straight or crooked rows. Furnished with gang and shovel equipment to meet needs of every soil and crop.

Remember, whatever farm machine you need, you will find it in the E-B Quality Line.

A Message to the Man who needs a Separator *and* Wants the Best

See a De Laval its Superiority is Evident

Try Let it prove how much cream it will save

Trade in your old Separator as Partial Payment

6.60 to 14.30 Down Balance in 15 Monthly Payments

Compare an improved De Laval side-by-side with any other. See it yourself; and when you do you will not need an expert to tell you which one is by far the better designed and made, sure to last longer, do better work, and prove the better investment.

And if merely seeing does not convince you, go a step further and try a De Laval side-by-side with any other. Not one buyer in a hundred ever does that and fails to choose the De Laval. Your De Laval Agent will gladly arrange a trial for you.

Then after you have seen and tried the improved De Laval, after you have convinced yourself that it is better than any other, trade in your old separator as partial payment on the new machine, which you can buy on such easy terms that it will pay for itself out of the savings it makes.

If you do not know the name of your local De Laval Agent, write the nearest De Laval office below.

WASHINGTON, FARMER

He Had His Troubles With His Home Made Seed Drill

AN INTERESTING book entitled "George Washington: Farmer," published about ten years ago, gives an account of the home life and agricultural activities of our first president. The author speaks of him as one of America's first experimental agriculturists, and relates many of his experiments both successful and otherwise. The following paragraphs from the book should make farmers of today glad they are living now instead of 150 years ago.

One of Washington's successes was what he called a "barrel plough." At that time all seed, such as corn, wheat and oats, had to be sown or dropped by hand and then covered with a harrow or a hoe or something of the kind. Washington tried to make a machine that would do the work more expeditously, and succeeded, tho it should be said that his plans were not altogether original with him.

How the Drill Was Made

Washington's drill, as we should call it today, consisted of a barrel or hollow cylinder of wood mounted upon a wheeled plow and so arranged that as the plow moved forward the barrel turned. In the barrel, holes were cut or burnt thru which the corn or other seed could drop into tubes that ran down to the ground. By decreasing or increasing the number of holes the grain could be planted thicker or thinner as desired. To prevent the holes from choking up he found it expedient to make them larger on the outside than on the inside, and he also found that the machine worked better if the barrel was not kept too full of seed. Behind the drills ran a light harrow or drag which covered the seed, tho in rough ground it was necessary to have a man follow after with a hoe to assist the process. A cord was fastened to this harrow by which it could be lifted around when turning at the ends of the rows, the drill itself being managed by a pair of handles.

Washington wrote to a friend that the drill would not "work to good effect in land that is very full either of stumps, stones, or large clods; but, where the ground is tolerably free from these and in good tilth, and particularly in light land, I am certain you will find it equal to your most sanguine expectation, for Indian corn, wheat, barley, pease, or any other tolerably round grain, that you may wish to sow or plant in this manner. . . . A small bag, containing about a peck of the seed you are sowing, is hung to the nails on the right handle, and with a small tin cup the barrel is replenished with convenience, whenever it is necessary, without loss of time, or waiting to come up with the seed-bag at the end of the row."

A Leather Band Around Barrel

As Washington says, the drill would probably work well under ideal conditions, but there were features of it that would incline, I have no doubt, to make its operator swear at times. There was a leather band that ran about the barrel with holes corresponding to those in the barrel, the purpose of the band being to prevent the seeds issuing out of more than one hole at a time. This band had to be "slackened or braced" according to the influence of the atmosphere upon the leather. . . .

Washington was, however, very proud of the drill, and it must have worked fairly well, for he was not the man to continue to use a worthless implement simply because he had made it.—L. E. B.

Chestnuts Resist Blight

A FEW chestnut trees have appeared to show a marked degree of resistance to the blight, which is steadily spreading over the country and it is desirable that the more resistant trees be located and preserved. Some of these may prove to be the starting point for a new growth of chestnut. A tree should have resisted the blight under natural conditions for at least ten years before it can be regarded as worthy of consideration as a resistant tree. Many trees will throw off blight cankers and apparently be doing well for a few years and then quickly succumb to the disease.

The Office of Forest Pathology, in the Bureau of Plant Industry of the United States Department of Agriculture at Washington, D. C., is interested in receiving reports of exceptionally resistant American chestnuts, that is, trees which survive after nearly all of the chestnuts in the vicinity have been killed. Unusually resistant trees are recorded and examined at some later date. Nuts and grafted trees from the most promising are planted in an experimental orchard at Bell, Maryland, for further testing.

Inspected Lightning Rods

LIGHTNING rods, when constructed of the right material and properly installed, reduce the cause of fire by lightning by almost one hundred per cent, according to R. U. Blasingame, head of the Farm Machinery Department of the Pennsylvania State College. This could not be said of the so-called "lightning rods" which were sold, not so many years ago, by an army of fakirs. Many of the buildings on which these fake rods were installed burned to the ground when struck by lightning, because of the counterfeit rods or on account of improper installation.

As a result of these costly experiences many farmers have little faith in lightning rods as a protection against fire. Now, however, the sentiment against lightning rods is changing, partly because the National Board of Fire Underwriters has developed a "Master Label Service" which carries an inspection of the rods at the factory and another inspection after the rods have been installed.—B.

Farm Is the Backbone

IN A recent address before the International Kiwanis Club, Charles M. Schwab, President of the Bethlehem Steel Corporation said in part.

"Agriculture is a necessary backbone of a sound national development. Agriculture is a stabilizer in times of stress. In the last twenty years much attention has been given to machines in factories. The next few years will see more scientific attention given to machinery on the farm and to farming as a big constructive element of our community life."—Frank A. Meckel.

Certified Potato Yields

AN EXPERIMENT conducted in Cambria County, Pennsylvania, in 1924, showed that the yield from certified seed exceeded the yield from non-certified seed by eighty-three bushels. The yield from the certified seed was 265 bushels per acre, compared to 182 bushels for non-certified seed.

A similar experiment conducted in the southeastern part of the state showed a difference in yield of 105 bushels to the acre in favor of certified seed.

Farming the Nation's Power Crop

GOOD SOIL alone won't grow a crop. It must be plowed and harrowed, seeded and cultivated.

This was the hard fact faced by a small group of men in Chicago forty years ago. Their soil was the future growth of America; the crop—electric service.

They knew that unless the best thought of the ablest men in the industry could be put at the service of all, it might never fulfill the high destiny they had hoped for it. Thus it was that these "farmers of power" founded the National Electric Light Association, as a voluntary organization of electric light and power companies. Concerned from the first with questions of economy in production and future development, the Association formed committees of experts, the result of whose research was published for the benefit of all members.

Today, representing ninety per cent of the nation's electric service, three hundred committees are engaged in studying the needs of their communities and the problems of the industry as a whole. In its cooperative program with the Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Power Farming Association, and the U. S. Departments of Agriculture, Commerce and the Interior, the National Electric Light Association is able to speak for a united industry engaged in working out a practical way of serving that larger group of "farmers" on whom the prosperity of the nation must always depend.

NATIONAL ELECTRIC LIGHT ASSOCIATION

Swiss Weather Prophet

A Weather Warning That is Dependable

The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out, look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.

Scientific and Accurate

This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.

Markets

PHILADELPHIA MARKETS

March 2, 1925.

PRODUCE

Among the new vegetables making their appearance on the market are new potatoes from Florida and asparagus from California. There are fairly good supplies of old carrots from Penna. and New Jersey on the market and also fairly liberal supplies of new carrots from southern points. Old cabbage is plentiful and sells very slowly at very low prices. Onions are very slow and dull. Nearby parsnips show a wide range in condition. Peas are scarce. Peppers are in light supply. A car of new Florida potatoes sold as high as $16 per bbl this morning. Old potatoes are evry slow and dull. Spinach is quite plentiful and moved out slowly at lower prices. Sweet potatoes are held steady but sell slowly.

Vegetables—ASPARAGUS, Calif, doz bchs, $10@20. BEANS, green, Fla, hmpr, $7@9; poorer, $4.50@6; wax, Fla, hmpr, $3.50@7. Michigan and New York fleeces, delaine, unwashed, 63@64c; ½-blood, unwashed 60c; ⅜-blood combing, 67@68c; ¼-blood unwashed, 67@68c. Wisconsin, Missouri and average New England, ½-blood, 64@65c; ⅜-blood, 66@67c; ¼-blood, [illegible]

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, February 28, 1925.

Cloverseed, cash, old, new and February, $18.45; March, $18.15; October, $[illegible] bid. Alsike, cash, old, $12.50; new February and March, $12.60. Timothy seed, cash, February and March, $2.80 bid; May, $2.90 bid.

CLARION COUNTY, PA.—Mother rth has lost her covering of snow e last few days. Wheat looking e. Farmers hauling manure for ring plowing. Some hauling ushed lime from the crushers. ite a number of farms for sale and nt this spring. Some quit farming account of high wages. Quite a of repair work going on around e farms and new buildings going . Market prices: wheat, $1.70; ts, 70c; corn, $1.70; hay, $12@ ton; potatoes, $1; mill feed, chop, ; bran, $42; middlings, $46; cot- nseed, $60; oil meal, $60; cream- y butter, 42c; eggs, 40c; live poul- , 18c lb.; pork, 14c lb.—C. R., b. 17.

CUMBERLAND COUNTY, PA.— e have had a very cold winter with veral heavy snows drifting the ads badly. Heavy rainfalls and ild weather have come and the ow and ice are all gone. Wheat d grass look well. Not many farm les this spring; some farms that ere idle last year are again being nanted. Mumps, diphtheria and arlet fever are prevalent in town d country and school attendance very much affected. Work on the rms has been scarce all winter. arkets: wheat, $1.90; oats, 70c; rn, $1.50; potatoes, $1.15; but- r, 50c; eggs, 40c; milk, $2.75; gs, $12 per cwt.; hay, $20.—A. L. ., Feb. 26

DAUPHIN COUNTY, PA. — Mild eather prevails at this writing. ost of the snow has melted leav- g fields without protection. Grain lds, however, are in fair condition. uite a number of farmers have har- sted ice of good quality. Much ood is being cut and hauled to wns for fuel. Indications are that e acreage of potatoes will be large. armers are buying grass seed for ring sowing. Much alfalfa will sown Wheat, $1.85; oats, 80c; rn, $1.40; potatoes, $1; hay, $18; gs, 45c; butter, 55c.—I. F. M., eb. 21.

MERCER COUNTY, PA.—We had n old-time winter — continuous now, ice and very cold for about wo months. At present we are hav- g damp, foggy wet weather; snow nd ice all gone and frost pretty ell out of ground. Dirt roads al- ost impassable, except where slag r ashes have been used. Wheat nd meadows look good at present aving been well protected this far ut March may undo it all and make different showing. Very few pub- lc sales listed yet. Many empty ouses over the county and many arms for sale. Hired help sufficient ut wages asked are more than farm- rs can afford to pay. Some sugar amps opened and doing fairly well or February; give promise of a good eason. No grass seeding done yet. Dealers asking $23 for No. 1 medium red clover seed. Therce is an abund- ance of hay here and stock has win- tered well Wheat $2. Corn for sale only by dealers; oats, 70c; hay, $15; potatoes, 75c at cellar or pit, $1, de- livered to markets. Beef cattle, 10c; dressed hogs, 14c; veal calves, live, 9c, or 15c hog dressed; hens, heavy, 23c; butter, 35c; eggs, 35c; milk, $2.41 for 3.5 per cent test deliver- ed at plant; butterfat, 47c for Jan- uary at Grove City Creamery.—J. W. B., Feb. 23.

MONTGOMERY COUNTY, PA.—The winter seems to be broken up. Two weeks of mild weather has taken all the frost from the ground. The various streams reached the high water mark but no serious damage was done. Farmers are cutting wood and getting ready for the spring work. Public sales are quite numerous with fair prices being realized. Dairy cows bring good prices but fat cattle are a drug on the market. The feed market made a general drop last week. Prices: bran, $2; gluten, $2.25; oil meal, $2.75; oats, 75c; wheat, $1.95; corn, $1.55; eggs, 40@45c; butter, 50@55c; chickens, 28c.—C. N. D., February 25.

UNION COUNTY, PA.—W. H. Baker bought the Baker-Everitt farm of 129 acres in Buffalo Township for $7000 at private sale. Henry Williams sold his forty-acre farm in Hartley Township for $3000 to Mr. Batdorf, a neighbor. Public sales have begun and will continue thru March. Cows are selling very well, better than other stock, except shoats. Marketing grain is at a standstill since the drop in wheat, but corn has advanced to $1.25. Seed potatoes are being ordered as well as cloverseed. Some trees are being trimmed in orchards as the weather has been like March weather lately. Evening meetings are being held by the county agent to plan work in the way of experiments on farms to try out new varieties of corn, oats and potatoes.—J. N. G., Feb. 23.

WASHINGTON COUNTY, PA.—Winter is still with us. Had quite a snowstorm the last of January. Many of the narrow roads were filled in spots and had to be shoveled out. Dobbin and the shay took their accustomed places after a long rest. Had a few spring-like days that removed most of the snow and made us think of plowing; then came another snow that chilled the thought. Twenty below zero one night, but did not seem to hurt wheat much. Local dealers taking orders now for clover seed at $24 per bu. for medium red. Got ours some time ago for $21.50. That's once early buying paid. Seed corn will likely be the same way. Feed prices high, but butter coming down. Bran, $43; middlings, $55; cottonseed meal, $56; oil meal, $60; butter, 40@50c; eggs, 60@70c; live chickens, 23c; hay, $18@20. Many farms begging for tenants which don't appear. Stock looks pretty fair so far. A few early lambs in evidence. Some cases of grippe and scarlet fever reported; otherwise, health conditions good.—B. McN., Feb. 17.

YORK COUNTY, PA.—Weather for the last two weeks has been spring-like. The snow of January has all passed away without any high water. The ground is clear of frost except in a few places. The country dirt roads, while not as deep as they are some springs, are in bad condition at present, altho a few more days of nice weather will leave them in good shape as the well drained spots are beginning to dry off now. The farmers are taking advantage of the nice weather to cut their next year's wood supply and haul out manure, while quite a few that have south-laying land are engaged in plowing. Wheat is coming along nicely, the heavy snow of last month being a benefit to it. There are about the usual number of farm sales this spring, tho the prices are not quite so good. Wheat, $1.90; corn, $1.35; oats, 65c; hogs, $11@11.50 cwt. live weight; chickens, 25c; eggs, 30@35c; potatoes, 70@90c.—W. K., Feb. 24.

Stocks of Irish Potatoes

THE quantity of Irish potatoes in the 35 late potato states on January 1, 1925, and available for sale after that date is estimated to have been 126,021,000 bushels, compared with 110,258,000 bushels last year and 132,943,000 bushels remaining January 1, 1923, from the big crop of 1922.

In the 19 states which usually have a surplus of late potatoes for shipment, merchantable stocks on January 1 are estimated to have been 105,701,000 bushels compared with 98,252,000 bushels in 1924, and 118,151,000 bushels in 1923. In these states the percentage of the crop held on the first of the year was about the same as the average percentage remaining on the same date during the four preceding years.

In the 16 "deficient" late potato states where the quantity of late potatoes grown is usually insufficient to supply local needs, stocks appear to have been relatively heavy on the first of the year. This is particularly true in some portions of the Corn Belt where the yield of late potatoes was unusually heavy last season and the quantity available for sale from the farms exceeded local requirements up to January 1.

Many Fed to Stock

Reports from growers indicate that up to January 1 approximately 11,500,000 bushels of potatoes "of such size and quality that they could ordinarily be marketed" had been fed to the livestock. Of this quantity, approximately 3,500,000 bushsin, over a million each in Michnesota, 1,900,000 bushels in Wisconsin, and over a million each in Michigan and North Dakota, nearly a million in New York, and about a third of a million each in Pennsylvania, South Dakota and Iowa. Elsewhere the quantities fed were relatively small and probably consisted chiefly of potatoes of somewhat inferior quality.

After allowing for culls, for rather heavy losses in storage in some states, for losses from freezing, particularly in the Northwest, for quantities fed to January 1, and for farm requirements for food and seed, the entire quantity sold from the farms of the 35 states up to January 1 or on hand at that time and available for sale is estimated to have been 263,195,000 bushels. The 126,021,000 bushels remaining and available for sale on the first of the year, therefore, represents 47.9 per cent of the entire quantity sold or available for sale from the 1924 crop in these states.

Estimates Include Dealer Stock

The above estimates of stocks remaining on January 1 are intended to include all potatoes that were available for sale at that time, including those held by both growers and local dealers. They include some potatoes that will be lost from normal shrinkage and decay, some that will be fed to stock if the price is low and some that will be sold to neighboring farms and on local markets, as well as those available for shipment.

The estimates of the merchantable stocks remaining on January 1 are based chiefly on reports regarding holdings in the various localities, submitted by some 10,000 farmers and on the quantities reported by these men as remaining on their own farms and available for sale in comparison with the quantities already sold. The estimates are to be considered as approximate only, for the proportion of the crop still held varies greatly in adjoining counties and even on adjoining farms and there is no way to determine whether those submitting reports include a proper proportion of those growers who hold their crop and of those who have already sold.—U. S. D. A.

Canned Milk Stocks

CONDENSED and evaporated milk markets continue in a steady to firm position. Stocks are at a low point following a gradual reduction since last July. While demand at the moment is somewhat slow and exports have shrunk to a low figure, this is offset by light production and the fact that fluid milk markets are not throwing surplus milk back on condensed manufacturers.

The factor which is of outstanding interest is the continued reduction in stocks held by manufacturers. Latest figures available covering February 1, indicate that stocks on that date were at the lowest point they have been since March 1, 1923. February 1 stocks of 86,467,000 pounds represent a decrease of over 200,000,000 pounds under those of July 1 last year. As compared with a year ago, these stocks are just a little more than half those of February 1, 1924. The five year average for February 1 is 138,544,680 pounds. It is obvious, therefore, that statistically, concentrated milk markets are in a strong position.

Production Lighter

Lighter production and a fairly good domestic demand appear to be the factors which have brought about this condition. A month ago it was stated that some factories were having difficulty in securing adequate milk supplies to take care of current orders. This situation still continues to some extent and some manufacturers are not only reported to be oversold but are buying goods from other manufacturers to fill orders. Together with these conditions is the fact that in many condensery sections local demand from fluid milk markets is sufficient to absorb such surplus milk as might otherwise be diverted into condensed or evaporated, so that even if the milk flow has increased, production of concentrated milk has been slow to pick up.

Feed Quotations

THE quotations below are for transit and nearby shipments, Thursday, February 26, 1925, according to the Pennsylvania Bureau of Markets, the New Jersey Bureau of Markets, and the United States Bureau of Agricultural Economics, co-operating. The following quotations show the approximate cost of feed per ton (all in 100-lb. sacks) and grain per bushel in carlots, sight draft basis, delivered on track at Philadelphia and Scranton.

Pure spring bran	$31.50
Coarse spring bran	31.50
Soft winter wheat bran.....	33.00
Hard winter wheat bran	32.00
Standard middlings	32.50
Soft w. w. middlings	43.00
Flour middlings	36.50
Red dog flour	45.00
White hominy	43.50
Yellow hominy	43.00
Gluten feed	39.90
36% cottonseed meal	41.00
41% cottonseed meal	43.00
43% cottonseed meal	44.75
34% linseed meal	44.20

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May points, add $1.40 per ton.

for stock feeding

"Loose salt with rations regularly—in addition, keep it before all of your stock *all the time*"

Bags make good toweling

Guard against the danger of "not enough salt"

Even though you are feeding salt, there is danger of "undersalting." Each pinch of salt less than the animal needs takes just that much away from its normal health and from its profitable production.

The animal's health, like your own, depends on digestion. Food cannot be digested until it is broken down by the hydrochloric acid in the digestive juices of the stomach. Salt furnishes this supply of hydrochloric acid and it must be constantly renewed.

Authorities recommend the regular feeding of 1 pound of Colonial Special Farmer's Salt to each 100 pounds of dry feed. Keep another supply of this salt loose before stock always. They wont eat too much. The soft, porous flakes of Colonial Special Farmer's Salt dissolve instantly. It is particularly adapted to feeding requirements. Does not burden digestion—is absolutely pure—mixes thoroughly with rations and wont harden. Wont cause animals to get sore tongues.

"There is a difference"
The upper microphoto is of grains of ordinary salt. The lower is Colonial Special Farmer's Salt. Note the hard, cube-like structure of ordinary salt and the soft, porous, flake-like form of Colonial Special Farmer's Salt.

Follow sound advice and change to Colonial—feed the right way, regularly. Watch your animals improve and profits increase. Send for FREE booklet, "New Truth About Salt"—gives valuable information about use of salt on the farm. Send name and address for FREE copy.

Ration for Brood Sows

YOUNG PIGS are naturally poorly fortified against the cold raw spring weather. When the weather is cloudy, wet and cold, and the yards muddy, it is better to keep sows and small pigs inside than to let them out into muddy corrals. The quarters should be cleaned and new, dry straw put in at least twice a week.

One of the biggest problems in caring for the breed sow and her litter when penned up in the farrowing quarters is that of keeping the sow in good condition and on food.

The feeds should be of a laxative nature and well balanced with protein supplement, skim milk, or tankage, oats, barley and alfalfa hay should make up part of the ration. These feeds are especially desirable until the pigs are 10 days or two weeks old when a more concentrated ration of corn, kafir, milo, shorts and tankage can be used. Plenty of clean water, not too cold, should be provided.

When Dogs Trespass

THERE is no more reason why a dog should be allowed to trespass on private property of others, destroying gardens, flowers, shrubbery, than to allow horses or hogs to do so, declares John L. Passmore, State Bureau of Animal Industry.

A dog under the law is personal property and property holders can prosecute those who allow dogs to trespass and can recover damages by action of law. Police officers, which includes constables, are charged, under the Dog Law, with certain duties in the control of dogs running at large. These duties cover the disposing of unlicensed dogs and the taking up of properly licensed dogs running at large.

Persons having trouble with dogs running over and destroying their property, should notify the owners, and if the nuisance continues, should bring action against the owners or get in touch with the local police officers.

Watch the Seed Labels

DR. E. M. GRESS, botanist of the Bureau of Plant Industry, Pennsylvania Department of Agriculture, urges the farmers of this state to safeguard their own interests by buying farm seeds from seedmen who comply with the seed law passed four years ago by the Legislature. He said the law requires all farm seeds sold in lots of ten pounds or more to bear a label or tag containing specific information regarding the quality and purity of the seed.

The law states the tag must carry the following information: The common name of the seed; the approximate percentage of purity; the approximate percentage of weed seeds; the name and number per ounce of any one or all of the nine noxious weed seeds, if present, (the noxious weeds named in the law are: garlic, quack grass, dodder, Canada thistle, devil's paint brush, king devil, horse nettle, bind weed, and perennial saw thistle); the approximate percentage of germination, with the date when the test was made; the full name and address of the dealer who sells the seed, and the origin of the seed.

Minister's Wife—Wake up! There are burglars in the house.

Minister—Well, what of it? Let them find out their mistake themselves.

GERIG'S BABY CHICKS Order now. Low prices. 14 years' exclusive breeding S. C. White Leghorns insure QUALITY. English and American. Hundreds of pleased customers. Catalog FREE. Gerig's Leghorn Farm, Box 13, Auburn, Ind.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

CHRONIC DYSENTERY.—I have an old mare twenty-five years old which scours most of the time; her bowel movements are better for a time, then she seems worse again. Can you tell me what to do for her? She has a good appetite.—J. Q. J., Harborton, N. J. Mix equal parts dried powdered sulphate of iron, powdered catechue and powdered gentian together. Give her a tablespoonful or two in ground feed three times a day.

LICE.—Can you tell me how to get rid of cow lice? I bought a very good bull calf, but soon discovered he was covered with lice and I washed him with tobacco water. Have also applied gasoline, kerosene, and have used fly spray on him, but he is still lousy. None of my other cattle have lice.—E. M., Stewartville, N. J. If you will boil one ounce of staveacre seed in one quart of water for two hours, then add enough water to make the original quantity and occasionally apply it to calf it will destroy the lice. Vinegar dissolves the nits. Kerosene emulsion is another fine lice killing remedy and not expensive.

TETANUS—LOCKJAW.—We have two heavy Percheron horses; one has recently had a mild attack of lockjaw. Our veterinary gave him antitoxin and other medicine, then told us the horse would get well. He is much better now. He cut himself with his sharp shoe. We also had another horse some two years ago which had lockjaw, but got well. What is the cause of this disease and can we do something to prevent it?—R. A., Auburn, Pa. Tetanus is an acute infectious disease due to an anaerobic micro-organism which produces in the body a toxic product resembling strychnin in its physiological action. The disease is caused by the bacillus tetani an anaerobic rod-shaped germ, usually carrying a spore at one end. The germ occurs in the spore form in the earth, putrifying fluids and manure. In infected districts tetanus spores are normal inhabitants of the intestines of ruminants. Infection takes place thru a fresh wound into which the spores of the specific bacillus have gained entrance. Obviously, wounds so situated as to become contaminated with soil or manure are most apt to become infected. The period of incubation is usually from one to two weeks.

The preventive treatment with antitoxin has proved effective beyond any doubt and is always successful, provided it is undertaken early in the period of incubation. This treatment consists of the injection of tetanus antitoxin under the skin after an injury of any kind or after operations.

It is advisable to inject animals with antitoxin in all cases where there is the slightest danger of lockjaw developing. When the antitoxin is not administered for four days or more after inoculation the result is uncertain. If farmers keep on hand a supply of this antitoxin they can apply it without the aid of their veterinarian. This immunity is well worth its cost.

DROPSICAL SWELLING.—We have a cow which freshened a few days ago. There is a soft swelling between front legs, another in throat, but it does not interfere with her eating.—W. F., Norwich, N. Y. Give her a dessert spoonful of acetate of potash in feed or water two or three times a day. Apply camphorated oil to bunches twice daily and don't neglect to hand rub swelling.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Others Have Proved It You Can, Too

Many dairymen are using Ti-o-ga Dairy Feeds regularly. They have had *experience* with it. They *know* whether it pays or not. As a result of their experience do they change to other brands or methods of feeding? They most certainly do *not*. Year after year they stick to Ti-o-ga. This is just plain *fact*—a simple matter of record.

Have *you* tried Ti-o-ga Dairy Feeds?

If you never have, how can you *know* whether they can cut *your* cost of milk production? There's just *one sure* way of finding out, and it's a plain dollars-made-or-lost proposition that's *worth* finding out. Test it yourself!

Red Brand Ti-o-ga Dairy Feed to be fed with low protein succulent roughage; Silage, Pasturage, Green Fodder, etc.

White Brand Ti-o-ga Dairy Feed to be fed with medium protein dry roughage; Timothy Hay, Mixed Hay, Corn Fodder, etc.

Blue Brand Ti-o-ga Dairy Feed to be fed with high protein dry roughage; Clover Hay, Alfalfa Hay, etc.

If your dealer can't supply you, write us.

TIOGA MILL & ELEVATOR CO. Waverly, N. Y.

AMERICAN CHICKERIES, BOX 218, GRAMPIAN, PA.

Fight Tent Worms Now

THIS is the best time of the year to look for the egg masses of the tent caterpillar which later feeds heavily upon the foliage of shade trees. These egg masses are usually found on wild cherry and apple, though they may often be found on many other plants. They are recognized as a mass of eggs thickly set together around a limb about the diameter of a lead pencil.

Burn the Egg Masses

The masses should be cut off and burned, otherwise each mass will produce about 300 caterpillars in March or April. Every egg mass destroyed at this time of the year greatly decreases the number of caterpillars, which will later feed on the foliage of shade trees and make their characteristic "tents."

Futher information can be secured by writing the Department of Agriculture and asking for bulletin No. 120, which gives an interesting discussion of this insect.

Way to Get Better Roads

"GOOD roads are inseparably linked with education. At the other end of a stretch of mud too thick for a boat and too thin for a 'flivver' the best school might almost as well be in the next state. What we want, as I see it, is roads from the farms to the schools, churches and markets. We have in Texas, as elsewhere, much sentiment for cross style speedways. There are commercial values in such, but I am chiefly concerned with roads as something to foster a happier country life. . . . The hope of America is in an alert and vigorous country life."—Mrs. Ferguson, Governor of Texas.

We certainly want good roads but our townships are sometimes taxed to the limit and the supervisors are at their wit's end to know what to do to satisfy all the calls for improved roads.

When You Want a Thing Done

Let me tell you one way we can do wonders in this line. Instead of howling and scolding the supervisors, and spending a lot of energy in such an unprofitable way, better roll up your sleeves and make a short necessary piece of road.

We had a piece of road which needed resurfacing with gravel. The supervisors said that they could not do it so our community went together and did the work in a few days this fall after the fall work was done. Nine farmers with their help did all the work free of charge to the township. Suppose every community should do likewise; our roads would, in one year, improve 100 per cent.—C. R. Bashore, Round Top Valley Farm, Berks County, Pa.

Co-operative Prospering

AT THE annual meeting of the Connellsville Co-operative Dairy Association, which was attended by ninety per cent of the membership, the annual report showed that the dairy had done a business of $110,000 during the past year, and had given the stockholders a good price for their milk.

In five years the indebtedness of the association has been reduced from $45,000 to $15,000, according to C. L. Rumberger, county agent of Fayette County, and a fine trade has been developed for the association products. The stockholders unanimously declined an offer to buy the plant for a sum above its total cost.—B.

Unadilla Silos are Dependable

Dairy owners know from *experience* that Unadilla Silos will *keep* their silage in the best possible condition. They *know* they can depend on their Unadillas *year* after *year*, because of their *sturdy* construction. They are *air tight, water tight, frost resisting* and *weather defying*.

Get All The Facts!

Our *big handsome* catalog telling all about silos and giving complete information as to the *time* and *money saving features* of the Unadilla sent *free* upon request. Also complete information about the

Time Payment Plan

And the liberal discounts offered for cash and early orders. *Save* money and still get the silo that is used by more dairy owners in the east than any two other makes combined.

Embargo Does Not Prevent Shipment of Day-Old Chicks

SHIPPERS and buyers of day-old chicks will be glad to know that embargoes on poultry placed because of the poultry influenza do not apply to shipment of day-old chicks when placed in new or disinfected containers. Parcel post shipments are in no way affected by state embargoes. There is no reason to believe that the disease can be spread thru shipment of day-old chicks.

LAWRENCE P. UHL

A PIONEER IN THE BABY CHICK BUSINESS. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business, making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have now decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices.

100% Live Delivery Postpaid. Prices on	50	100	500	1000
White, Brown and Buff Leghorns	$7.00	$13.00	$62.00	$120.00
Sheppard Anconas, R. C. Brown Leghorns	7.50	14.00	66.00	130.00
Barred and White Rocks, Black Minorcas	8.00	15.00	72.00	140.00
S. C. and R. C. R. I. Reds	8.00	15.00	72.00	140.00
White Wyandottes, Buff Orpingtons	9.00	17.00	82.00	155.00

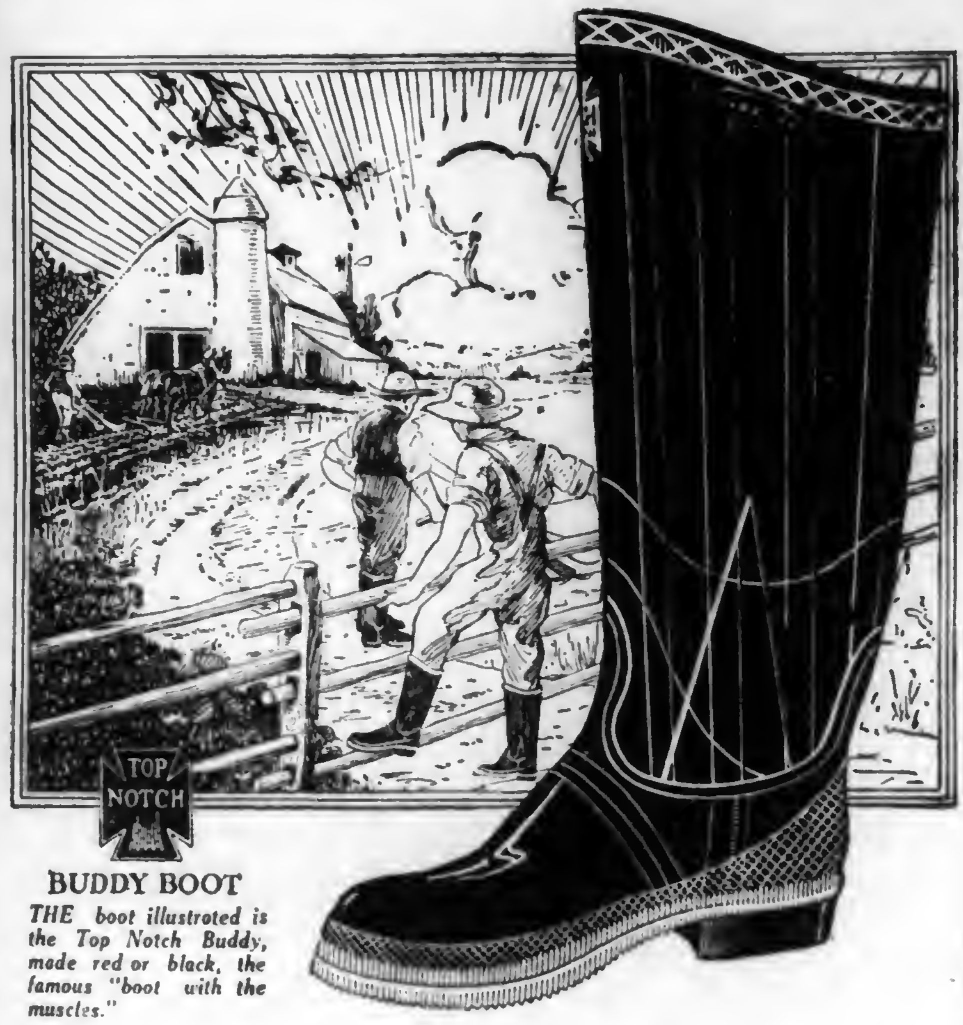
PHILADELPHIA, PA., SATURDAY, MARCH 14. 1925

"Things That Made 1924 a Good Year for Us"—A Butler County farmer's story of six improvements that added to his income. Page three.



BUDDY BOOT

THE boot illustrated is the Top Notch Buddy, made red or black, the famous "boot with the muscles."

Tested—

to withstand hard knocks

THE tests to which we put Top Notch Rubber Footwear must prove, beyond question, that they are able to stand hard knocks. In snow and slush, in rocks and snags, they are punished every day for months. They must prove themselves worthy to bear the Top Notch Cross—the guarantee of rubber footwear mileage.

When they do prove it, every other pair of that particular kind and style of rubber footwear is made by hand just as carefully as the test pairs, and of the same superior grade of materials: rubber, cashmerette or jersey-cloth tops, or linings.

You will find Top Notch Rubber Footwear in every style and quality—for men, women and children—heavy and light rubbers, cloth-top and all-rubber arctics and rubber boots. Make certain that you are getting this long-wearing quality, by seeing the Top Notch Cross on the soles.

Top Notch Rubber Footwear costs no more than ordinary rubber boots or shoes. They will often give twice the service. They all have the Top Notch standard of mileage.

The best stores carry Top Notch Rubber Footwear or will be glad to get it at your request.

Two Sides to Sunday Selling

Loses His Self Respect

I THINK that Dr. S. W. Fletcher's article on Sunday selling at roadside markets is good and that he is right when he says that each man must be guided by his own conscience. As I see it there are two things to be considered: More money for your produce, whether fruit or vegetable, or less money and a day of rest.

In considering more money, how much more does he receive by selling on Sunday? I do not think he receives more than the retailer in the cities does for the same grade of goods, say on an average of fifty per cent more and maybe in some cases not that, because most of the roadside markets are near enough to large cities to do their own marketing with a truck.

I think science will bear me out when I say that any person who works seven days a week and puts in as many hours a day as the farmer, is shortening his life by doing so. If he has been brought up in a Christian home, as a great many of us have, I am sure that he will lose quite a bit of his self-respect when he makes it his business to work on Sunday, and also the respect of his fellow men.

I do not say that I think it is wrong to do necessary work on Sunday, for there will be times every year that it means work on Sunday or have the produce spoil and I consider that it is wrong to waste it.—N. D., New Jersey.

It's Wrong Not to Sell

WE CANNOT agree with Dr. Fletcher's statement that the ancient command, "Remember the Sabbath day to keep it holy," is still binding; if it were, Doctor Fletcher should also keep the other tenets of the Mosaic law pertaining to burnt offerings, feast days, and other Jewish rites. The Jews were forbidden to make a fire on the Sabbath under penalty of death. I presume there were good and sufficient reasons, at that time, for this drastic law. Jesus evidently did not consider that the law applied to his time; do good, was his slogan; forms, he largely ignored.

I live near one of the main highways to the New Jersey coast resorts. It is a pleasure to watch the joyous, happy crowds of automobilists as they flit by on Sunday. It seems to me that it would be the nature of sin to deny these people the privilege and pleasure of taking home with them a goodly supply of fresh and wholesome fruit and vegetables.—J. E. K., New Jersey.

What the Scriptures Say

THE present-day tendency to break down our Sabbath and make it a day of pleasure, and still further a day of buying and selling in order to get gain, has been looked upon with sorrow and misgivings by many of our good people. The advent of the automobile has increased this practice in a large measure. This is a sinful practice and has always tended toward the injury of the individual or class, or nation which follows such a practice.

In the first place it is in direct violation of God's commandment. He has told us: "Remember the Sabbath day to keep it holy." "Six days shalt thou labor and do all thy work."

Furthermore, the testimony of sacred writers has been: "Blessed is that nation whose God is the Lord," and "Righteousness exalteth a nation but sin is a reproach to any people." Sabbath desecration is nothing short of sin and is fast becoming a reproach to us as a people.

Of course, the man who established a roadside market and kept it open on the Sabbath day made a nice little pile of money, but, "What doth it profit a man if he gain the whole world and lose his own soul?" In the second place it is in direct violation of the laws of our state.

All civil law is based upon Divine law and when we violate one we are almost certain to violate the other. The man who runs a roadside market and sells on the Sabbath day is just as much a law-breaker as the man who violates the traffic laws upon our public highways, or the one who violates the prohibition law by manufacturing or trafficking in illicit liquors.—F. E. P., Butler County, Pa.

Easy to Find Excuses

DOCTOR FLETCHER'S article and your editorials on Sunday selling from farm stands states a grave issue which, argue as we may, will not be settled, pro or con.

Personally, I think it is wrong, but others think I am wrong and contend that the "Sabbath (or I should probably say Sunday, as Sabbath is almost unknown in many localities today) was made for man, not man for the Sabbath;" that the city and town folk can get out only on Sunday, etc., etc. The devil can always find plausible excuses and reasons, just as he did for Adam and Eve.

I agree that the autoist is more to blame than the farmer. Let him come Saturday afternoons or in the summer evenings after his eight-hour day is over. Our churches have many empty seats while the roads are thick with all kinds of cars and trucks.

Brother farmers, I believe that if you ponder the question deeply and honestly, considering it in the light of being our "brother's keeper," as well as guarding our own best interests, physical, moral and financial you will agree with me that the practice of Sunday sales is wrong and in the end will prove a lasting loss instead of profit.—B. McN., Washington County, Pa.

Need One Day for Rest

I WAS very much interested in the articles in Pennsylvania Farmer regarding roadside markets for selling fruit and vegetables on the Sabbath day.

It is stated that, "modern life provides an increasing number of 'reasons' for not adhering to the traditions of our forefathers."

I think the Divine law is just as applicable to modern life as it ever was. Six days thou shalt labor and the seventh rest. And again, "Remember the Sabbath day to keep it holy." People who conduct Sunday markets violate this law. They are not doing so to accommodate the city people. The object is gain, and for every dollar thus gained they will lose in some other way. I have been engaged in the fruit business for a number of years and find it is a very strenuous time in the harvest season, and we need the seventh day for rest.—O. R. A., Lycoming County, Pa.

Sets a Bad Example

ONE of my earliest childhood memories is of my mother asking us children: "How many commandments are there?" Answer: "Ten."

"How are they divided?" Answer: "Into two tables."

"What does the first contain?" Answer: "Our duty to God."

"What does the second contain?" Answer: "Our duty to man."

That teaching stands for all time.

Things That Made '24 a Good Year for Us

Necessity Forced Some Changes That Proved To Be Real Improvements

By HUGH FERGUS,
Butler County, Pa.

LAST year among farmers was generally supposed to be an unprofitable one. One type of mer that was hard hit by lower prices was the iry farmer. Yet, in spite of the fact that over e-sixths of our total farm income in 1924 was m milk, it was the most profitable one we have d in the nine years that we have been on Amity rm. This year we hope to do even better, even o milk is not making a very auspicious start ward better prices.

Six things on our farm not only helped last ar's income but will still more help our income this and other years. These six items are as llows: alfalfa, sweet clover, Cornelian oats, a w silo, a new chicken house, and fertilizer on r pasture.

About three and a half years ago we secured special market for our milk at the Slippery ck Normal School. At that time eighteen cows ould supply their ants. Since then not ly has the school rown but the facts rought out in the st three years showg the importance of ilk in the diet have d the dietitian of e school to use more ilk in the menu. As result we have had o increase the herd to tween twenty-five nd thirty cows. These ith the young stock nd the horses make om forty-five to fifty ead.

Fifty-acre Pasture

Altho Amity Farm nsists of 143 acres ere are about twenty acres in timber and ugh land that cut e farm down to sevty-three tillable res and fifty acres of sture.

When we had eighen cows and the rresponding young ock and horses the rm maintained them, d each year in addin we sold several ndred dollars worth of grain. Last winter in der to carry so many head thru we spent over ree hundred dollars for hay. I have always und that if a fellow has to buy most of the d for his cows, and in addition have hired lp to milk them, there is not a whole lot of t left.

We already had a twelve by thirty-six silo hich furnished about half as much silage as the s needed. There is no crop that will produce much feed per acre as ensilage corn and there no roughage the cows like so well as ensilage. last summer we bought and erected a twelve thirty-six metal silo. Thus far we like this pe of silo very much and the cows like the enlage.

Silo Pays for Itself in Two Years

I do not believe we are going to have to buy y this winter, whereas, if we did not have the lo we would have had to buy as much as last ar. This one item will more than half pay for silo the first year. I believe a silo will half y for itself every year.

With so many head of stock I knew fifty acres would look pretty bare of pasture before half the summer had passed so in March I applied 150 pounds per acre of acid phosphate on all the pasture we could reach with a drill. To apply with the drill, I removed the hoes. Then to supplement this in late summer I seeded nine acres of oats with sweet clover.

Sweet Clover with Oats

Sweet clover has been boomed rather extensively as a pasture crop for the past couple of years in the states west of us, the claim being made that it will produce twice as much pasture per acre in a year as blue grass pasture. It is claimed that cows can be turned on it earlier in the spring and on account of its deep rooting system it withstands the dry weather from July thru the fall months better than blue grass.

To insure a stand we got a wagon load of soil from a spot in a nearby limestone quarry where sweet clover has been growing for several years. We broadcasted this over the nine-acre field we intended to plant. After the necessary harrowing we seeded it right in the drill with the oats, from the grass seeder attachment, at the rate of six quarts of sweet clover and two quarts of red and alsike clover. I did not expect to get a perfect stand the first year of seeding, this being the reason for using the red and alsike. We got a good stand but it was not perfect enough to leave for a second year when it would produce the most feed. At the time of oats cutting it was so high that there was at least a foot of clover in the butt of the oats sheaves.

About September first we turned the cows in on the sweet clover. The result was an immediate increase in production. As near as I could tell from the records we got about 4000 pounds of extra milk from the sweet clover. This year I am going to try ten acres of it. The field that produced it last year will be sowed in oats again and I am going to try seeding alfalfa along with the red and alsike for next year's hay crop.

Ever since we came to Butler County we have been told that alfalfa either would not grow or if it did would be an uncertain crop. This had been pounded into my cranium so much that I did not try a seeding of it until the spring of 1923 when I sent to Montana for certified Grimm seed. Using dirt from an old plant for inoculation I seeded three acres with the result that I got a good stand the very first time the field was planted to this crop. Perhaps it is needless to say that the field was well limed.

I believe that by accident I learned one cause of alfalfa failure in this section. One end of the field is somewhat wet. The spring I planted the oats was rather wet, with the result that the oats drowned out and the weeds grew along with the alfalfa in profusion. When we clipped the stubble in the fall the weeds made such a good protection for the young alfalfa plants that my best stand was on that part of the field. Profiting by that lesson I manured the three acres early this winter for a covering.

Experiment with Oats

Another profitable change in our farming operations was in planting Cornelian oats. For a starter I planted nine acres of this new variety and nine acres of my old Sixty-day variety. Results far exceeded my expectations for the Cornelian produced at the rate of sixty-nine bushels per acre while the Sixty-day produced fifty-nine bushels.

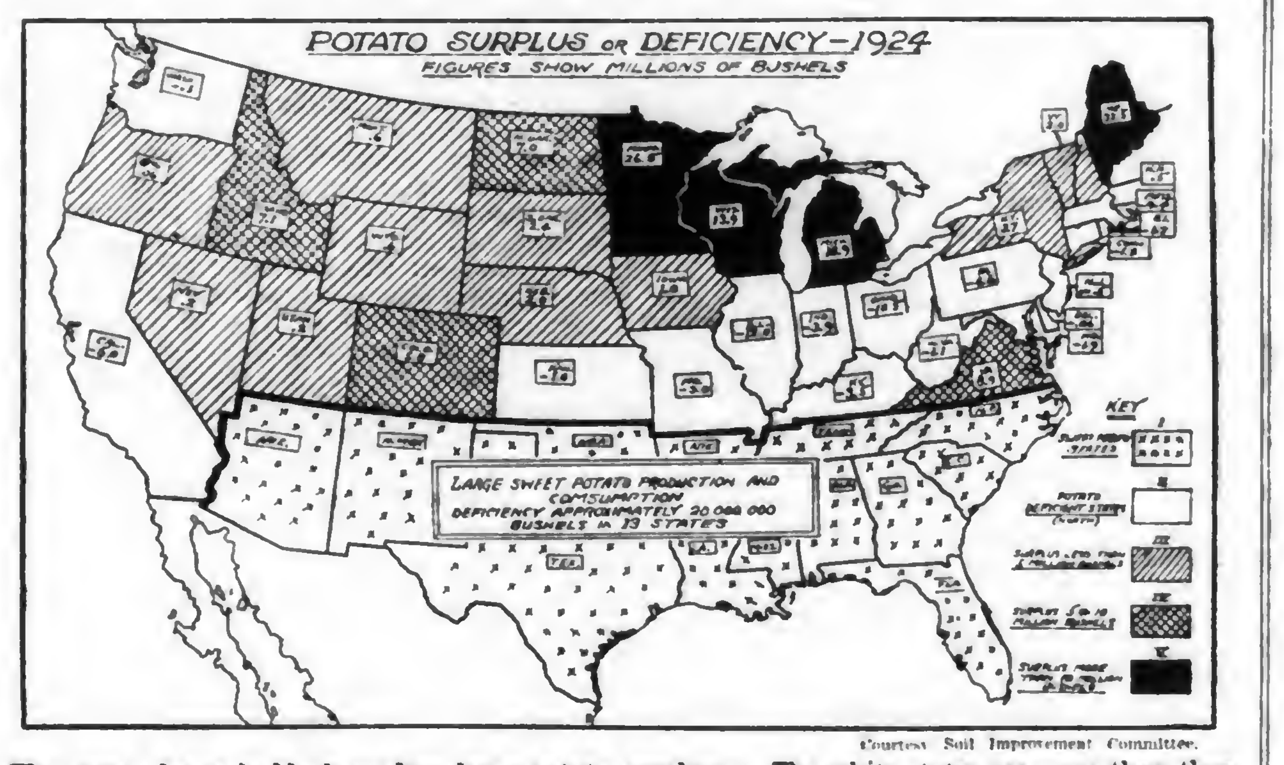
Until this past summer we had given chickens a small place in our farm system and had kept our average of fifteen hens in a ramshackle kind of house with the result that they were likely among those that helped keep the average production per hen in Pennsylvania as low as it now is.

However, our family has now grown to five children; and with Dad and Mother, and one or two hired men most of the time, all liking eggs, it became imperative that we increase the hen population. So last summer we built a twenty by twenty-foot poultry house according to plans of the New Jersey Experiment Station. The concrete floor slopes eight inches from back to front. We put in two small windows in the rear near the floor. There are windows and curtains in the front and a dead air space back of the roost and over the dropping boards.

A Dollar a Day from the Hens

We have seventy-two hens at present, mostly pullets. During January and thus far in February, they have been clearing about a dollar a day above the cost of their feed. This has been so gratifying that we are planning on increasing the flock to three hundred. Since the Child Labor Amendment did not pass we think our children, as they are growing up, can help a lot in taking care of them.

A Glance at the Potato Situation



POTATO SURPLUS OR DEFICIENCY—1924
FIGURES SHOW MILLIONS OF BUSHELS
LARGE SWEET POTATO PRODUCTION AND CONSUMPTION
DEFICIENCY APPROXIMATELY 20,000,000 BUSHELS IN 13 STATES
KEY

Courtesy Soil Improvement Committee.

The states shown in black produce large potato surpluses. The white states use more than they raise. The cross-lined states have small surpluses, while sweet potatoes are used chiefly in the southern states. Pennsylvania imported over 6,000,000 bushels in 1924.

Your Profit Is in the Soil

OUR FARM

Where an Editor Works and Thinks

A CONSISTENT reader in Clarion County, Pa., writes that he is going into the potato business and wants to know a little more about some things in connection with raising potatoes. Evidently the remarks made here concerning the Russets, which he says do well in his neighborhood, unsettled him a little. He also wants to know how practical is the plan of "plowing in" the seed as the ground is plowed, also, "Which is the best potato fertilizer?"

• • •

WHERE the soil and other conditions are favorable to Russets, plant Russets by all means. They are a good and profitable variety. Get certified seed and give them good treatment and we doubt if there is a better yielding potato of equal quality for Pennsylvania conditions. The question raised here a couple of weeks ago was concerning the effect of dark or reddish soil on the appearance of Russets. In most markets preference is given to smooth, white skinned potatoes. The Russets meet this requirement when the soil is not colored too much.

• • •

SOME farmers always plow in their seed. The seed is dropped in every third furrow as the ground is plowed. The next furrow covers them. The ground is then harrowed repeatedly until the potatoes are ready to cultivate. Fertilizer may be drilled on before the harrowings. We doubt, however, if anyone can make the 400-Club in this way. It is a cheap way of raising potatoes if one is satisfied to raise crops of average size. I know of one man who a few years ago raised a fair crop in this way at a cost of a little over nine cents a bushel. No spraying was done, however. The soil was a loose, loamy clover sod. In a heavy soil any saving made by this way of planting is lost in the extra expense of digging. Where the soil is right, land plentiful, and help scarce or high, it is a permissable practice.

• • •

CONCERNING fertilizer, there is no such thing as a best fertilizer for all conditions. It all depends upon the type of soil and the kind of crop preceding. If clover, alfalfa or other legumes have been grown the last year or two, less nitrogen is needed in the fertilizer. If it is good corn land, probably four to six per cent of potash will do. The best plan for a beginner is to ask the best potato grower in the neighborhood what he uses. The amount to apply per acre depends upon how well you do the other work. If good seed is planted on good potato soil, if thoro cultivation is practiced, and if intensive spraying is done, it will pay on almost any soil to apply one thousand to two thousand pounds per acre. To fertilize economically a farmer should know his soil as well as a doctor knows his patient's condition and the medicine he uses.

• • •

TO PLANT, or not to plant, that is the question with a good many potato growers this season. The generally unprofitable prices the last two years, and in some places the disastrous prices, have shaken the faith of many farmers in potatoes. Others, taking heart in the thought that many will reduce or drop the crop, will increase their acreage. We know of one rather large grower who, while counseling reduced acreage for others, is planning to increase his own planting by fifty per cent. While I do not think it wise to increase the potato acreage at this time, it is not likely that we shall have a repetition of last year's conditions. The cause of the over-production last year was not excessive planting, but the unusual yield per acre in the big producing sections. For the country as a whole the average yield per acre in 1924 was over 124 bushels, while the average yield for fifteen years is 99½ bushels.

• • •

THE map published on page th of this issue is worthy of study by readers in this section. The states shown in white, among which are Pennsylvania and New Jersey, do not produce as many potatoes as are needed in them. For this reason, potatoes in this territory are assured of prices much higher than those received in surplus producing states because of the cost of transportation. However, our lower acre-production and the higher producing costs partly off-set the freight costs.—R. P.

The best thing about being poor is that if you have friends you know they must like you.

THE CHEERFUL PLOWMAN

Business before Pleasure

BESIDE the blazing kitchen stove, with oven doors ajar, Sam Hadley and "the Mrs." sat and talked of the bazaar. "I know they'll have a cracking time, but don't you reckon, Maw, that I had better stay at home and haul that barley straw?" "Indeed you're not!" said Mrs. Sam, "For Perkins' ones and us have planned to eat together, Sam, and they would make a fuss!"

"But, Maw," said Sam, "I'd ought to stay and cultivate the corn, and then you know as well as I my Sunday pants are torn!" "Your Sunday pants are darned again, you couldn't find the place; and Sam, our, Willie and our Tom are in the peanut race!" "I think the haymow's leaking some, though Willie thinks it's not. I think I'd better fix that roof, and mow that vacant lot!"

"But Sam, our Willie's going to speak his piece about the flag, and Dick is going to try to guess the beans that's in a bag!" "I know," said Sam, "but Maw, you see the pasture gate is down; I should stay home and fix that up and not hike off for town!" "But Sam, our Susie plans to sing her song about the war, and don't you mind the hit she made the time she sang before? But, course if you don't wish to go, Tom, Susie, Will, and I can ride along with Perkins' ones and Dick with Frank McBye!"

Sam Hadley wound his silver watch, then gravely shook his head. "I think," said he, "the all of us had better get to bed. We'd better get an early start, I reckon Maw, don't you? If everybody's going to go, why I'm a-going, too!"—J. Edw. Tufft.

Sears Roebuck and Co.

What Robinson Crusoe Needed

Robinson Crusoe, stranded on his desert island, could have had the world at his service if he had found a Sears-Roebuck catalog. For it would have brought him all the things he needed to make life worth while.

Today, nearly nine million families everywhere in the United States use our catalog whenever they want to buy at the lowest prices.

If you are not now in this great family of thrifty buyers, we would like to send you "THE THRIFT BOOK OF A NATION" so that you may see the endless opportunities it offers for savings on everything you and your family need.

The WORLD'S LARGEST STORE is yours to command. Our buyers go everywhere good merchandise can be bought at prices that will insure you the biggest savings; we maintain stores and warehouses throughout the country to give you the best and quickest service; 99 out of every 100 orders we receive are shipped in less than twenty-four hours. We sell only dependable goods, honestly described and illustrated.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Self conquest is the greatest of victories. —Plato

Sweet Clover for Hay

BECAUSE of the relatively high price of clover and alfalfa seed some farmers are considering the sowing of sweet clover for hay. The best advice to such is, "Don't do it." Sweet clover has a legitimate place on many farms as a soil improver and for pasture, but it is not satisfactory as hay, at least not in comparison with clover and alfalfa. Even tho seed is high, no progressive farmer who keeps stock can afford to drop them out of the rotation. No satisfactory substitute has yet been discovered.

Peach Prospects

WHILE it is too early to make any statements about the probable size of the 1925 peach crop, observations in some sections indicate that the buds have been injured or killed in many peach growing localities. This word comes especially from some of the western and southern orchards. Of course, discouraging reports are heard almost every year concerning the peach crop, yet when the harvest season comes there are generally enough to supply the market. Cold weather is not now the greatest concern of the peach grower. The Oriental moth is, apparently, more certain than frost, and about equally uncontrollable.

President Coolidge

CALVIN COOLIDGE is now President of the United States in his own right. When he took the oath of office as President in that early August morning in so dramatic yet simple manner he took up the tangled threads of another's administration. Yet, so well did he conduct himself and the affairs of the nation that he was looked upon as the only man who had the ideas, and the moral courage to back them, so much needed in a time of universal hysteria and uncertainty.

On Wednesday, March 4, he stood upon a platform on the east side of the Capitol and, after taking the oath of office delivered his inaugural to the largest body of hearers, thru the aid of the radio, that any man in the history of the world ever addressed orally. While that speech contained little that was new, it was somewhat more emphatic as a statement of the principles which have met with almost universal approval. It revivified the old idealism, that of making peace, justice, economy and common honesty the common purposes of the nation as a means of reaching the newer ideals. Those who are given to exploiting the freedom and privileges which the government wisely allows them, in order to gain selfish ends, will find little comfort in the address.

It is fortunate that so many people heard the address as delivered and were enabled to get at first hand the finer qualties referring to and stressing human justice. While most newspapers printed the address in full the headlines and editorials were largely devoted to emphasizing the President's references to prosperity and his recommendations for tax reduction. These things are right and will meet with general approval, but they are far from being all that made the millions of common people vote for Calvin Coolidge for President of the United States.

Sunday Selling at Roadside

THE question raised earlier in the season by an incident related by Doctor Fletcher brought a large number of replies. For obvious reasons we cannot publish all of them, much as we would like to do it, but those published in this issue, beginning on page two, are representative of the lot. There are about four against the practice to each one in favor of it. The arguments against Sunday selling are based upon two propositions: First, that it is in violation of religious principles, and second, that the best interests of man require that he devote one day in seven to rest. We believe both these reasons are acceptable to the vast majority of country people, even tho they are accepted as principles rather than as rules of practice.

The Sesqui-Centennial

NEW life has lately been given the movement to hold a fitting celebration of the one hundred-fiftieth anniversary of the signing of the Declaration of Independence in Philadelphia. The city, state and national governments have signified their willingness to give it financial as well as moral support. It will, no doubt, bring tens of thousands of people to the city and may contribute helpfully in re-emphasizing some of the fundamental principles of our government, as well as show graphically what has been accomplished in the century and a half. About the only remaining objection to the proposition is the name.

Enough Farmers

IT IS not so many years ago that almost every program for a farmers' meeting had on its program a subject such as, "How to Keep the Boys and Girls on the Farm." Incidentally, and inconsistently, much of the discussion on other subjects during the meeting did a good deal towards showing the boys and girls why they should not stay on the farm. The migration of country-bred people to the cities has been going on in increasing proportions for a century. A natural law, that of supply and demand, has done much to cause this. Trade, manufacturing and commerce have been developed in this country in that time and the demand for workers in these lines has increased a thousand fold. In the meantime, farming methods have been so much improved that a far less proportion of the population is required to furnish the food for the whole. What chance for profitable farming would there be today if the farmers of twenty-five years ago had found a solution to their question of how to keep the you people on the farm?

Breeding Laying Flocks

CAN the egg-laying characteristic of a h be perpetuated and increased in her pr geny by breeding as surely as can milk p duction in a cow? This is a question peop are asking with as much eagerness as th did twenty years ago. Scientific men ha differed on the subject, but the experien gained by those who have conducted egg-la ing contests as well as individuals who ha been trap-nesting thru several generatio should be sufficient by this time to settle th question. It is proof from long records laying and breeding that the public wan Why do we not have proofs such as breede of dairy cows furnish?

A. B. Farquhar

FOR three generations the name of A. B Farquhar has been familiar to the peop of Pennsylvania, and in a measure to th people of the United States. His eighty years of life were not devoted exclusively his own business, which was that of a succe ful manufacturer of implements and machi at York, Pennsylvania, but he also took great interest and an active part in politi and social affairs. He was born at San Springs, Maryland, in 1838, leaving there f York, where he became an apprentice in machine shop, at the age of eighteen yea He was a man singularly gifted in making th acquaintance of the great and held many co missions of trust from the government critical times, from the time of the Civil W nearly to the end of his life. His death o curred at his home in York on March 5, 192

Shooting at Denmark's Mark

WHEN Denmark discovered some for years ago that she could not afford devote her scarce and costly land to the ra ing of grain in competition with America prairies she turned her attention to improvi the dairy herds. In forty years the averag production per cow has been more th doubled. The dairymen of Denmark b adopting scientific and business methods ha excelled the rest of the world as produ of dairy products and have become America most serious competitors in the world's tra Figures and estimates indicate that in fif five years American dairymen have increa the per cow production something like fif three per cent—about half the improveme made in Denmark. Now, when grain and fe costs have increased so much in this countr our dairymen are under the same necess for seeking the most economical means production, namely, better and more health cows, as were the dairymen of Denmark for years ago. Will they do it?

Farm Prices

THE upward trend in prices of farm pro ucts which was quite pronounced duri the last months of 1924 has not continued int the present year. In fact, a slight lowering o commodity prices has been the rule. This itself should not be cause for uneasiness, ho ever, since it is the usual experience. Co sumption usually slackens somewhat with th lull in manufacturing and construction wor always noticeable in the winter weather fo lowing the holidays. Prices during the co ing season will, as always, depend upon tw age-old factors, viz., the amount of stuff pr duced, and the ability of people to buy. Farm ers can have little control over the latter fa tor, but they can and should produce onl enough to supply a normal market and th insure a living price. It's high time our agr cultural experts were making this feature part of their advisory work.

Washington Letter

SIXTY-EIGHTH CONGRESS ENDS.—The six- -eighth Congress passed into history March 4, ith little accomplished during its second session, the way of constructive legislation. With a all independent minority in position to block y proposed legislation the most of the adminis- ation's proposals were thrown into the discard.

None of the pending co-operative marketing lls were passed. The Dickinson bill got thru e House, but the Senate committee on agricul- re voted to substitute the Capper-Haugen bill. is removed any chance of success for either of ese proposals. The Dickinson bill was looked on by some as a "monkey wrench" thrown in wreck the co-operative marketing plan propos- by the President's conference. It provides ex- nsive government machinery with nothing to . Members of Congress who voted for it say ey would have opposed it if they thought it had y chance of becoming a law.

CO-OPERATIVE BILL NOT DEAD.—No one lieves that the movement for co-operative mar- ting legislation will end with this session of ngress. The recommendations of the President's nference, incorporated in the Capper-Haugen l, promise to be a live subject for discussion ring the summer months, and will come up ain in Congress early in the next session, which is now predicted will be called early in the fall. Senator Capper points out that the President's m program proposes to establish a marketing stem which would help the farmers by reducing e spread between the producer and consumer, by minating wastes, lost motion and gamblers' rvests.

CITY AND FARM MUST CO-OPERATE.—The w Secretary of Agriculture, Dr. William M. rdine says "it is not enough for farmers to co- erate with each other. We must have co-oper- on between city and country, between the busi- ss man in the town and the business man on e farm. Each must realize that neither can oper without the other."

SHOALS STATUS STILL UNSETTLED.—The derwood bill providing for leasing the Muscle oals power and nitrate plants to be used in the duction of fertilizer was lost in the Senate jam, e to the fight made against it by the govern- nt operation senators combined with the power erests. But representatives of farm organiza- ns demanding that the plant be kept for fer- izer production succeeded in getting the House adopt, by a vote of 173 to 3, a resolution asking t President Coolidge appoint a commission to dy the Muscle Shoals proposition and report Congress as to future operation.

PRINCIPAL AGRICULTURE BILLS.—The standing measures enacted at this session of ngress in which farmers are directly interested the postal pay and rate increase bill, the Pur- ll bill, increasing appropriations for experiment tions, an amendment to the farm loan act con- ming to the recommendations of the Presi- nt's conference, and the agricultural appropria- n bill giving to the Department of Agriculture e to a million dollars above the Budget Bur- u's estimates, largely for agricultural research rk, and extension of the livestock market news vice to several large eastern livestock markets.

POSTAL RATES GO UP ON APRIL 15.—The stal pay bill has been signed by the President. provides for an average increase of $300 an- ally in the salaries of government employes, ting from January 1, this year, and increase in stal rates effective April 15, to raise about $60,- 0,000 of the $68,000,000 required for the pay vances. There will be a two-cent service charge every parcel post package, in addition to the gular charge.

SOUTH UNDULY AGITATED.—Twenty-five uthern senators recently joined in sending tele- ams of protest to the governors of seven west- n and one New England state against legisla- n proposing special taxes on butter substitutes. ferring to the attempt of representatives of e oleomargarine makers to incite the cotton owers to fight the dairy interests, secretary A. Loomis of the National Dairy Union, says that is development is one which is likely to develop imosity and cause future trouble if the facts are t understood.

FIGHT IS AGAINST FOREIGN OILS.—Repre- ntatives of cotton producers who were in Wash- gton recently in conference with the marketing ecialists of the Department of Agriculture, in- rmed Mr. Loomis that they were sure the cotton ople had no part in stirring up the present con- oversy, and that it was started by the oleomar- rine interests in an effort to defeat the pro- sed legislation in the dairy states. Most of the tton men now know that the real fight is against foreign oils not between American agricultural interests.

COMPETITION FOR FOREIGN APPLE MARKETS.—In his mid-winter review of the apple situation in European markets, Edwin Smith, foreign representative of the U. S. Department of Agriculture, gives some information which is important to apple growers wherever located in this country. It appears that while there was a short crop in England, in the apple districts of Holland, Switzerland, Czecho-Slovakia, and Jugo-Slavia the crop was the heaviest and best ever harvested. The competition of these countries is not given adequate consideration by the American apple industry. It represents a large volume and a much higher class of commercial output than in England. Shippers in northern Italy put a package on the market second only to the Pacific northwestern box apples. In Germany these apples are seen in much larger volume than are American apples.

COMPLAINTS ABOUT VIRGINIA YORKS.—One depressing influence on foreign markets this season was the large quantity of small and inferior apples exported from Virginia. Many bushels of small York Imperials were exported by Virginia growers that should have been made into vinegar. They have undermined the value of all the better quality of American apples in British markets.—E. E. Reynolds.

Harrisburg Letter

SIGNS OF A CHANGE.—While the Legislature has demonstrated it means to adhere to the old time practice of voting money to hospitals on what is styled the individual plan, as contrasted with the lump sum, there is unquestionably a rising sentiment among even city legislators for a more business-like method and an avoidance of the biennial scramble for money for home institutions. The hospitals are now reduced to a basis of free service rendered within certain limits and the appearance of a lump sum for such institutions as are not on the state lists because of some sectarian bar is a sign of a change not lost on Capitol Hill. The truth is legislators and county leaders are getting tired of the pulling and hauling they must do and the criticisms at home and are inclined to welcome some way of getting rid of the log rolling system.

RENEW PROTEST ON OFFICE.—In the last few days there has been a renewal of the protest by men active in agricultural organizations against the plan of placing the office of the Alcohol Permit Board in the Department of Agriculture and some pressure may be exerted in the House. The Adminstration is standing pat on the proposition, but there is a thought about that it would agree to a change rather than lose the bill. The crucial battle on the bill will come in the House very soon.

READY FOR THE BUGS.—The State Bureau of Plant Industry is getting ready to clamp down the regulations on the Japanese beetle and the appearance of the bug about the middle of June will find probably the best arrangement yet. Whether it can be continued under the appropriation recommended is a question and for this reason the State Grange plan of an emergency appropriation of $100,000 is being quietly favored. The budgetary recommendations of the Department of Agriculture will come up for review in the appropriations committee before long and some of the money which rumor says will be trimmed from other departments may be turned over to Secretary Willits' office.

THE ROAD BILLS.—The measure providing for issuance of the highway bonds having passed, attention is now being devoted to the so-called "omnibus road" bill providing for addition of close to 150 new routes to the state system. The Governor vetoed the bill last session, but the unanimous passage of the measure in the Senate and the strong sentiment for it in the House have brought about a change of attitude.

COST OF PASTURE.—A study is being made by the Department of Agriculture of costs of pasture for milk cows, sheep and draft animals. This is the first time such information has ever been assembled and it has been worked out to [illegible] for a bulletin.—Hamilton, Harrisburg.

New Jersey Letter

FRUIT INTERESTS TO MEET.—Fruit growers and nurserymen thruout New Jersey will gather at Trenton on March 24 to consider ways and means for the creation of better business practices in the sale of nursery stock. The meeting, called by the New Jersey State Farm Bureau in co-operation with the New Jersey State Horticultural Society, is the outgrowth of efforts this season to secure a new law which would compel nurserymen to protect buyers against inferior stock and fradulent practices. The bill, as introduced by the farmers, has not been pressed due to friendly efforts of the nurserymen to meet the farmers for a careful consideration of the entire situation, with the thought of preparing a bill for next season which can be pushed for passage by all growers and nurserymen in the state.

POOR SEED CORN.—The general run of seed corn held on New Jersey farms is poorer than in average years, according to reports received from a number of the central and southern New Jersey counties. The cool weather of last year which delayed ripening of the corn, followed by a severe cold spell in mid-November, is accountable for the poor quality. As a result, farmers are laying their plans for careful germination tests this season as a means of selecting the better seed corn ears. In some sections farmers are considering the use of good seed corn from the 1923 crop instead of that held over from field run this last fall.

MILK BILLS IN LEGISLATURE.—The milk bill introduced by the farm interests this season to provide for the licensing and bonding of milk dealers has passed the Senate and was reported favorably by the House Committee of Agriculture. Final action on the bill is expected in early March. Another bill introduced in the Assembly "to protect the consumers of milk, especially young children, from contracting tuberculosis" has brought opposition from some of the dairy interests in the northern part of the state. If the bill passes, no producer can sell raw milk except for pasteurization unless his herd is under supervision or unless he has made application for such supervision.

FARM BUREAU MEMBERSHIP.—The New Jersey Federation of County Boards of Agriculture plans to increase its membership in some of the counties during the season. A number of prospective farm bureau members were missed in the membership drive of a year ago and these, as well as new-comers, will be invited to join their County Boards of Agriculture, which will give them membership in the State Farm Bureau and in the American Farm Bureau Federation.—B.

New York Letter

JERSEY BREEDERS WANT SPECIAL MILK PRICE.—Heated debate among dairymen has been aroused by the proposal of the Onondaga County Co-operative Association to sell Guernsey milk at a special price of twenty cents a quart. The Holstein breeders have demanded, in that case, a special price of eighteen cents a quart for bottled milk for babies. At the last meeting of the Jersey breeders of the county, numbering some breeders of national fame, it was claimed that Jersey milk was richest of all, and a committee was appointed to look up the possibilities of a special price for Jersey milk at hotels, restaurants, soda fountains and inns, and ways and means were discussed for securing a price better than the Syracuse city quotations on milk testing 3.6 per cent butterfat.

FARMERS DUPED OUT OF FORTUNES.—Salesmen of poor stocks have caused a loss to Cortland County people of $75,000 in the past eighteen months, according to complaints made to the Chamber of Commerce of that county. This body has maintained a Burns Detective Agency for that period of time and has advertised its free service and protection thru the banks and local press to the people of the county. Over [illegible] bogus schemes have been listed in the office of the secretary in that time. One farmer just lately gave a salesman $2000 to invest for him. The latter, seeing his success, then asked for [illegible] extra to "transfer the stock" in [illegible] secured it and of course disappeared. So [illegible] fail to consult the bankers, the detective agency, or any other experienced person that it is [illegible] impossible to protect them fully. [illegible] many conceal their losses after [illegible] judgment has been misplaced that [illegible] tain that the losses to the people are very [illegible] more in that [illegible] than has been reported [illegible] Chamber of Commerce.

DAIRY NOTES.—The [illegible] purchased eight country plants of the [illegible] Dairy Company, also eighty retail bottle [illegible] routes and [illegible] cream business. The [illegible] very few cancellations of contracts during the period just closed.

TOURISTS PROFITABLE ASSET.—[illegible] investigation shows that tourists spent [illegible] lion dollars in the counties of the Finger [illegible] region last year. A new law last year [illegible] an increase in taxes of nine cents per year [illegible] capita, will result in a program of [illegible] velopment at this noted beauty center.—M. C. F.

Size, Soundness and Weight of Ears Measure Your Yield of Corn

Your real test of yield is the number of bushels of sound, dry, marketable Corn you grow per acre.

How your Corn starts off in the spring, how it develops and matures, depends on the plant food in the soil.

V-C Fertilizers will make your Corn grow more rapidly, and produce large, heavy ears that ripen before frost.

Early matured Corn means sound ears of greater feeding value, and less shrinkage.

V-C Fertilizers represent the best that the science of chemistry and agricultural practice know about the subject of plant food.

Ask your local dealer for V-C Fertilizers or write

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser

Manager Pomona Gardens, Newark, Delaware

Food for Truck Crops

I would like to get information on the following questions: What kind of fertilizer is good for lettuce if you haven't any staple fertilizer? What is the best thing to broadcast for cantaloupes? What kind of fertilizer is best for carrots and parsnips?—X.

On upland soil, not mucky, a mixture of fertilizer containing five per cent ammonia, eight or ten per cent of phosphoric acid, and about six per cent potash will do for lettuce, in applications up to a ton to the acre. On the heavier soils the whole ton might be applied at one time, but on sandy soil not rich in organic matter not over half this amount would be safe at one time unless you had irrigation at hand. Muck soils will need more potash and less nitrogen in the fertilizer.

A 3-8-6 or 3-8-10 fertilizer mixture will do for cantaloupes, carrots, or parsnips. Frequently the carrots are grown without any fertilizer at all, when they are planted after well manured and fertilized crops.—W. C. P.

Wishes to Raise Onions

I am considering the growing of onions. Please give me full information about the best kind of soil, fertilizers and planting methods. Which varieties are best? Is it more profitable to grow large onions or onion sets? How is an onion crop harvested and how is it usually marketed?—C. A. L., Lebanon County, Pa.

Onion culture from seed, on anything but muck soils or under irrigation, is a very risky business and in my opinion not to be undertaken, because the cost is always higher on unfavorable soils. Any soil that crusts or that dries out quickly is not adapted to onions from seed. Bulbs from sets can be grown on less favorable soils, in fact on any good farm soil well enriched, but the cost of planting the sets is considerable unless one can afford a set-planting machine.

Preparation of the Soil

Soil free from stones, not subject to washing in rains, not forming crusts or getting very hard after rains, and previously heavily manured, will raise either seed or set onions. It will not be enough to apply manure very heavily only in the year when the crop is grown; the land must be manured in previous years so that the upper soil is loose and friable.

Onions from sets ripen two weeks or more before those from seeds, but do not keep as well, and cost more to plant. For a local trade in green bunch onions, plant sets. Raising mature onions from sets is a specialized business which pays when it may be done in a wholesale way but not often on a small scale. Raising sets, also, is localized on certain soils, especially in northern Indiana, and except for home use I do not think most of us should try this business.

Rows Twelve to Fourteen Inches

On ordinary farm land that is to be planted with onions I would not start unless I could apply at least twenty tons per acre of well rotted manure. Strawy manure will not do much good for an onion crop. Thirty to fifty tons would not be thought too much by many a gardener. If some of this is so well decayed that it can be worked into the surface soil after plowing, so much the better. A very fine seedbed is necessary, and a level surface that will not wash in heavy rains.

After you have put on twenty tons of manure you will still require at least a half ton of fertilizer, a 4-8-10 mixture being all right for the soils that are likely to be found in your county. The fertilizer is to be broadcast after about one harrowing, and thoroly mixed with the soil. The seeds are sown twelve or fourteen inches apart between rows and about six pounds to the acre.

On manured land you will have many weeds, and at least three hand weedings will be required, besides more frequent workings with a wheel hoe. Thinning would be good, but it is seldom practiced, being too expensive.

The Marketing Problem

By late August or early September the tops should be dying, and the bulbs are pulled and laid in shallow heaps to dry for several days. The tops are then cut off an inch from the upper side of the bulbs, and the onions taken to an airy storage place. The topping may be done indoors instead of in the field, if that is more convenient.

Land treatment for onions from sets will be much the same as for the seed crop. The sets are placed two or three inches apart and two inches deep. Only sets less than five-eighths inches in diameter are good, because larger ones make seed stalks.

Commercially dry onions are usually marketed in sacks containing a hundred pounds. Locally they are sold by bushel or peck. In a new neighborhood a grower might have more trouble to sell his crop than in nother place where everyone grew nions. Unless one has special storge facilities for onions, he has to ll in the fall after harvest, and at means wholesale selling, which not easy to bring about, at profitble prices, in localities where onns are not largely grown.

Globe Danvers is perhaps one of e surest onion varieties. Ohio Yelw Globe and Southport Yellow lobe are also good. You can plant hite onions or red onions also, but e former are usually less producve and harder to keep, while the ones are not popular in most arkets.—W. C. Pelton.

Railroad Offers Prize

THE Baltimore and Ohio Railroad is again offering a $100 prize r the outstanding member of a ys' and girls' club in any of the untles in Pennsylvania crossed by e railroad. The prize money may used for scholastic purposes in y college in the state, or for a trip the Boys' and Girls' Club Conress, held in connection with the ternational Livestock Exposition at icago next December.

The counties in which this scholship applies are: Allegheny, mstrong, Beaver, Bedford, Butler, mbria, Chester, Clarion, Delaware, k, Fayette, Forest, Lawrence, Mcean, Somerset, Washington and estmoreland. The 1924 scholarip was won by Karl Kline, Cambria unty, a member of a baby beef ub.—B.

ought Nearby Potatoes

THE carlot receipts of fruits and vegetables in Harrisburg rose om 2291 cars in 1923 to 2570 cars st year, a twelve per cent increase, cording to a report of the Pennlvania Bureau of Markets. About rty per cent of the receipts conted of mixed produce.

Receipts of potatoes, the most imrtant commodity arriving as solid rs, amounted to 329 cars, a six per nt decrease compared with the 23 figures. The 1924 potato reipts from Pennsylvania and New rk were considerably heavier than 1923, Pennsylvania arrivals havg doubled. Last year these two ates furnished two-thirds of the te potatoes, while in 1923 they pplied only forty per cent. On the her hand, in 1923 Maine shipped enty-five cars to Harrisburg, and e North Central States of Michin, Wisconsin and Minnesota sevenseven cars, while during 1924 the ceipts from these areas were reced to eighteen and sixteen cars, spectively. About half of the Maine ock consisted of seed potatoes.

ennsylvania Gains, Railroads Lose

This increase of potatoes from proucing sections closer to the market pplanted to a large extent the 1923 ipments from longer distances, cut wn the $25,000 freight paid on e long hauls in 1923, and in genal benefited Pennsylvania.

Pennsylvania products received in e Harrisburg market included 20 rs of apples (from Adams, Frankn, York and Snyder Counties); 9 bbage (chiefly from Erie and Tia Counties); 1 peaches (from nklin County); and 72 potatoes 24 cars from Tioga County); the reainder from the Susquehanna alley and northern tier counties. otal carlot receipts of fruits and getables in Harrisburg during 924 are: Mixed produce, 1082; potoes, 324; bananas, 244; waterelons, 172; oranges, 158; cantapes, 135; cabbage, 101; grapes, ; apples, 66; peaches, 53; strawrries, 36; lettuce, 29; grapefruit, ; sweet potatoes, 18; celery, 14; mons, 13; onions, 10; tomatoes, 9; napples, 6; tangerines, 1. Total, 70 cars.

Traction in both drivewheels

"Good Equipment makes a good Farmer better"

100% More Power in damp, slippery, muddy places

Among many new and improved features of the *Light-Weight* OilPull Tractors is the amazing Drivewheel Interlock.

Because of this patented feature the operator can lock both drivewheels together at will, eliminating differential action. Slipping of one wheel, digging in on one side, etc., are prevented. Power and results are more than doubled in soft, muddy ground or sandy places.

Other features of the *Light-Weight* OilPull are complete enclosure of all working parts, a ball-bearing transmission; drop forged, case hardened, cut steel transmission gears which operate inside dust-proof cases and in a continual bath of oil—and many others.

In addition, all the famous OilPull principles—Triple Heat Control, Dual Lubrication, Oil Cooling, Fuel Economy, Low Maintenance Cost and 10-year Hot and Cold Weather service—are retained.

Questions on Soil and Crops

Answered By J. G. Lipman, Staff Contributor and Adviser

To Start Alfalfa in Spring

Please give me some advice or instructions on how to get a seeding of alfalfa started this spring. I have a ten-acre field, plowed in early fall. It is a well drained field, sloping toward the northwest. Would you advise sowing the seed alone or with some other crop.—A. L. B., Montgomery County, Pa.

Under your conditions the seeding of the alfalfa with a nurse crop would probably assure you of better results. It might be suggested that you use barley as a nurse crop and that you sow the latter at the rate of about one bushel per acre. Twenty pounds of good alfalfa seed per acre should answer your purpose.

If lime has not already been applied, it would be desirable to employ an equivalent of two tons of ground limestone per acre. This should be worked into the ground prior to sowing the seed. Care should be taken to prepare the seed bed properly.

The Proper Fertilizer

If alfalfa has not been grown on that land before, inoculation either with soil or commercial culture will be necessary. Three hundred to five hundred pounds of sifted topsoil from an old alfalfa field should be sufficient for the purpose. This may be broadcasted, and harrowed into the top soil. If commercial culture is employed, it should be added to the seed in accordance with the directions given by the manufacturers.

A fertilizer mixture containing an abundance of available phosphoric acid and potash should be used. A mixture consisting of 300 pounds of acid phosphate, 50 pounds of bone meal, 50 pounds of muriate of potash, used at the rate of 400 to 500 pounds per acre, should fully meet your requirements.—J. G. L.

Grass Mixture for Pasture

I have a little piece of ground that has been in corn and potatoes the last few years. I would like to seed this with sweet clover for pasture. I intended to put this patch in oats and seed it with sweet clover this spring. Should any other grass seed be mixed with the sweet clover for pasture. Could you tell me where I can get good seed and also good inoculation for sweet clover.—M. E. H., Lawrence County, Pa.

If it is your intention to sow sweet clover with the oats in the spring, it would be best not to sow other grasses with the sweet clover seed. The tendency for the sweet clover would be to crowd out the grasses. It would be well if you used scarified seed to assure prompt germination; otherwise, the stand obtained may not be satisfactory.

Another pasture crop that might be recommended as suitable for sowing after oats would consist of:

Red top	6 lbs.
Alsike clover	5 "
Kentucky blue grass	5 "
Timothy	8 "
Orchard grass	4 "
Red clover	4 "
White clover	1 "

This makes a total of thirty-three pounds per acre.

You should have no difficulty in obtaining satisfactory seed and also cultures for inoculation thru your local seed dealers or dealers advertising in reliable farm papers.—J. G. L.

Sweet Clover with Oats

I have a field that is quite run down. It was seeded to red clover last spring with wheat, but the clover did not catch on the back of the field where it is poor. I would like to get this poor part seeded to sweet clover. Shall I sow it in oats or alone? Must get some hay if I can. Would it be best to cut the oats for hay and then sow the clover? What analysis fertilizer do I need to encourage a better stand? I don't care to lime this spring.—E. F., Salem County, N. J.

By sowing sweet clover with oats and harvesting the oats for hay you would be assured of a supply of hay before the sweet clover is mature enough to cut and would, at the same time, give the latter a better chance to develop.

A thin stand of oats would give the sweet clover a better chance to develop; hence, it might be suggested that you sow not over two bushels of oats per acre with about twelve pounds of sweet clover seed. In order to make certain that the germination of the seed is prompt, it would be best to obtain scarified seed from a seed dealer.

Content of Fertilizer Mixture

A fertilizer mixture containing about 3 per cent of ammonia, 10 to 12 per cent of phosphoric acid and 2 to 4 per cent of potash should fully answer your purpose when used at the rate of 300 to 400 pounds per acre.

In view of the fact that you are not planning to lime in the spring it would be best to derive part of the phosphoric acid from bone meal. A mixture made up of 350 pounds of nitrate of soda, 120 pounds of muriate of potash, 530 pounds of bone meal and 1000 pounds of acid phosphate, used at the rate indicated, would give satisfactory results. The mixture will contain a little less than 4 per cent of ammonia, about 14 per cent of total phosphoric acid (of which at least 10 per cent

Why Strawberries Grow Whiskers

THE United States Department of Agriculture recently issued a new motion picture film entitled, "Why Strawberries Grow Whiskers." The fact that strawberries do grow whiskers may be news to many people but it is old stuff to strawberry men; indeed one of the prime objects in the life of the strawberry shipper is to prevent the growth of "whiskers" on the strawberries he handles. Hence this new film—which is designed to help the strawberry grower and shipper in their war against black mold, the fungus which is responsible for strawberry "leak" and for the "whiskers" which signalize the final stage of this disease.

The photography emphasizes the fact that infection from black mold is due largely to bruises and cuts on the berry, and that subsequent growth of the mold is much more rapid in warm air than in cold air. An interesting feature of this film is a long-time motion picture showing the growth of black mold, covering a period of twenty-four hours or more in a few seconds of projection on the screen.

Green's Trees Shrubs, Vines

Just What Your Home Needs!

Beautiful flowering shrubs and vines to give it cosy attractiveness. Handsome ornamental trees, windbreaks, evergreens—to provide shade and a pleasing setting. Magnificent roses, gladioli, peonies, hydrangeas, etc.—to add beauty to your home grounds. What a world of satisfaction—and increased property value—such planting brings!

Dwarf Fruit Trees for the Garden!

Have your own grown apples and pears fresh from little trees that fit in any garden. All the best varieties.

Whatever your needs for garden, orchard or home grounds—it will pay you to send to Green's for what you want.

Get Green's high quality vigorous growing, big-producing stock direct from the nursery at a big saving.

HOME IMPROVEMENT

If It Doesn't Seem Worth the Effort, Make an Auto Tour

FAR too many farmers are too indifferent in regard to home improvements. The best remedy is taking a few days off on an auto tour. This, I think, is very beneficial in several ways. It gives the farmer rest, new ideas, ambition and inspiration. He sees what other farmers are doing. He sees the home improvements of other farmers and cannot help admiring them.

The farmers can have beautiful homes at little cost. Any farmer can have a nice lawn with flower beds and shrubbery without much actual cash. Of course, it is often advisable to interview a landscape gardener before starting in order to have an appropriate setting of the flower beds and shrubbery. I have in mind a person who had very many flowers and shrubbery but had no order in the setting, and hence there was not much beauty there after all. A few flower beds properly placed are better than many improperly placed. A lawn mower is indispensable. Some evergreen trees are pretty in a lawn both summer and winter. A weeping mulberry tree looks fine in any lawn and so do a few catalpa umbrella trees.

Substitutes for Weather Boarding

Now as to buildings: Paint is a wonderful thing, but I think this is overdone by some who think they want to make their buildings attractive. If you want to be up-to-date in this respect it is necessary to paint every three or four years and that is too expensive if your buildings are painted all over. Now, instead of painting the buildings all over, I like to substitute asbestos strip shingles or the modern stucco, especially where the weather boarding is not good any more. So instead of tearing the old weather boarding off and putting new boards on, you could put asbestos shingles on the old weather boarding and save money and have a very attractive house. These asbestos strip shingles have a fast color for twenty years and they also make a house warmer. They are easy to put on.

A Modernized Log House

The modern stucco plan is a little more expensive but in the long run is the cheapest. I like this very much. The house we live in is the old style log house. We have stuccoed the lower story and strip-shingled the upper story. Now this leaves only the trimmings to be painted and the house looks always fresh and ornamental. The porch floor is of red tile with cement border. The porch posts are of concrete blocks. The porch extends across the entire south and east sides of the house.

I believe in making permanent improvements. I like to use concrete because it is a permanent job. The first cost is a trifle more but after it is done it stays done. The satisfaction you can have when you know that you need not always be repairing is worth the extra cost.

Now, having all these outside improvements, you also want to have inside improvements. You want to have running water and bath, electricity for lights, ironing, etc., music and good literature, such as good farm papers and magazines, and last of all is the radio.

Having all these home improvements on the farm where is the boy or girl who wants to run away from the farm?—C. R. Bashore, Berks County, Pa.

"Ever have any trouble with dyspepsia?"

Seed Oats

"Improved White Russian"

Want a "horse-mane" or "side-type" Oats that will yield well on heavy soils or on thin? Try "Improved White Russian." For nine years it has been making hosts of friends among our customers. A mid-season variety with strong, stiff straw that stands up until cut. Plump, well-filled heavy grains with very thin hulls. This makes for an oats of great feeding value. The Seed we offer was grown in the cold Northwest, giving extra strength and vigor. Cleaned and recleaned to give the plumpest, heaviest Seed.

"Swedish Select" Seed Oats

A grand good "tree-type" variety, brought to this country over 25 years ago. In ten-year test at Wisconsin Experiment Station it outyielded other varieties. Wonderful root development—draws water and plant food from even dry, thin soils. Succeeds where other kinds fail. The "Swedish Select" Seed we offer is bright and plump—germination tests almost perfect. If you like a "tree-type" Oats, this will suit you and pay you!

Other heavy-yielding kinds

"Shadeland Climax" for many years our leader. A sprangle or "tree" variety, grown for us on upland soil in far Northwest. Very early—rust-resistant—stiff straw—large, thin-hulled berries. Only a limited amount on hand. ¶ "Shadeland Eclipse"—Similar but a "side" variety. A great yielder. We offer Seed direct from Oregon. "Silver Mine"—an old standard variety you can depend on for good yields of plump, thin-hulled oats. A great favorite with manufacturers of rolled oats. Prices fair.

Starter for Young Chicks

Will you kindly give me some advice on feeding young chicks? I am told eggs are very good for them. If so, will you advise me how to feed them?—Mrs. C. R. S., York County, Pa.

You will find the commercial dried buttermilk starting mashes very satisfactory as a first feed for chicks. A good starter can be made of equal parts rolled oats and bran and five per cent of charcoal. If eggs are given to chicks the eggs should be hard boiled and crumbled up with the cereal. The Michigan Station formerly recommended using raw eggs in mixing a chick mash. This has been discontinued because of the danger of feeding eggs infected with white diarrhea which would spread that disease.

Another good ration consists of eighty parts yellow corn meal and twenty parts standard middlings. Then add five parts ground bone, five parts pure limestone and one part salt. This is fed dry. The chicks are given plenty of sour milk to drink and placed in a brooder house where they can obtain pure sunshine often, not the sunshine that is filtered thru glass.—R. G. K.

Overfeeding the Cause

I have about 280 hens and I notice that here and there the droppings are of a soft yellowish kind. I feed wheat in the morning, all they will readily consume, and a wet mash at noon and corn in the evening. They have dry mash and mangels before them all the time. I mix the mash in proportion of 100 pounds bran, 100 pounds middlings, 100 pounds beef scrap, 150 pounds corn and oats, ground, and 100 pounds gluten.—H. S., Bucks County, Pa.

Possibly the occasional cases of bowel trouble are due to digestive disorders caused by overfeeding. If you have dry mash before the hens at all times, I think you can safely omit the wet mash at noon until the hens show less signs of the bowel trouble. They may be overeating of mangels and this can be remedied by slicing the mangels at noon and only giving the amount which will be cleaned up in about an hour. A few individual birds may eat too much of the mangels if the supply is available at all times and not eat enough of the dry mash.

The bran in the dry mash is great help in preventing bowe trouble. Sprinkling about five p cent powdered charcoal in the d mash will also be beneficial.—R.G.

Laying and Brood House

I am about to build a hen house and brooder house. Will you please advise me how to build? I have ideas but realize you can help me.—J. R., Schuylkill County, Pa.

I think the lowest cost hen hou is of the shed-roof type. A ho twenty feet wide and twenty fe deep will house 100 birds. For larger flock a long house can made consisting of twenty-foot se tions. The house can be made of sh lap and covered with a good grade roofing paper. Where the seams ove lap they can be sealed down wi wooden strips painted white.

A good colony brooder house about 300 chicks can be made eit eight by ten or ten by ten. Build th house on skids like constructing shed roof house on a sled. Then can be moved to different fields the farm to give the chicks ple of free range on clean soil. As t size of your flock is not mention it is difficult to give much useful formation in the letter. I would vise you to write the U. S. Dep ment of Agriculture and your St Experiment Station for their bulletins containing drawings information on the building of ferent types of poultry houses.— G. K.

More Chickens Raised

SOME 678,300,000 chickens produced in the United S last year, which was 29,400, more than in 1923, according to mates of the United States Dep ment of Agriculture.

Despite this increased produc there were on farms January 1, 1 approximately 427,000,000 chic as compared with 470,300,000 January 1, 1924.

The decrease in stocks on January 1 is attributed to incre consumption, and to larger st going into storage.

Total stocks of frozen poultry storage February 1 were reported 138,253,000 pounds compared 99,486,000 pounds February 1 a ago.

Landlord and Tenant Problem

AFTER all, the landlord and his tenant are partners. Of course, not in a legal sense; but in the sense that their co-operation is essential to the greatest returns from the farming enterprise. On a cash rental basis, this relationship is not so pronounced. But where the tenant rents on a share basis both are vitally interested in the success of the farming business. If the farm can be made to produce more, it means more for both tenant and landlord.

We have had a somewhat varied experience in leasing our farm to a number of different tenants, and we are convinced that the renting problem is one given entirely too little attention. Years ago we gave little thought to the matter; we simply rented the farm on one of the half-dozen different arrangements common in our section and then thought no more about it. Of late years, h ever, we have found the matter on which a little study and figu can well be done.

A Give and Take Arrangemen

In the first place, a lease arra ment must of necessity be a give take provision. Neither the l owner nor the renter can expe have the "best of it." If either ceeds in securing such a lease, means that in a short time the ot party will become dissatisfied nothing will have been gained. costs a renter no small amount time he moves to another farm, so much in money, perhaps as "lost momentum"—he has to get der way again, get adjusted to farm, get properly equipped w implements and stock.

Likewise the land owner su

each time he has another renter come on his farm, who usually spends one year getting nicely settled down and adjusted to the farm.

Detailed Agreement Prevents Trouble

The first thing to be desired in a renting agreement is fairness. Another thing to be considered is the chance of misunderstandings. A misunderstanding in business dealings will nine times out of ten cause trouble. And there is plenty of chance for misunderstandings to arise after every precaution has been taken to prevent them. So to prevent misunderstandings in regard to the terms of the lease, we have it written out in detail touching upon all the provisions, typewritten with duplicate copies. Both copies are signed by each of the parties, so that if any misunderstanding arises, each has a signed copy of the agreement to refer to.

Some years ago we had a little experience of this nature. Our written agreement was very brief, touching upon the major provisions only. On one of the minor matters—the disposal of one-half of the corn fodder—a misunderstanding arose, and while it was satisfactorily adjusted with the tenant, it nevertheless was the cause of an embarrassing situation.

Must Keep the Barn Lot Clean

Our front barn-lot is nicely sodded and we have always made it a point to keep it very clean and presentable. One of our tenants, however, took it upon himself to use it as the general dumping ground for trash, stacked it full of corn fodder, cut up the sod, and made the premises look very disreputable. Now when we draft our renting agreement there is an article expressly stipulating that certain care is to be given this front barn lot.

We have also learned that it is better to make the agreement exacting, and then later, if one cares to, he can yield something in its enforcement, than to be too liberal and generous in making the agreement and then later grow very exacting in its enforcement.

Goodwill Counts for Much

For example: we have known several instances where landlords and tenants have started a hatred of each other by the attitude assumed over petty things, dividing the last half-bushel of grain from the threshing machine or gathering up the fallings and dividing them.

We start out with our minds made up to give the tenant these little benefits with the belief that the feeling of goodwill he will have for us will more than make up for the little loss we might sustain. It is good psychology, we believe. Some tenants, however, are equally generous—we have a man on our farm now who is so "square" that we would rather have us get the advantage than himself. Renters differ a lot, and when a farm owner gets a good one, he must remember that it is a partnership and that it is up to him to do his part.—P. C. G.

Poor Poultry Judges

AT A meeting on rearing chicks held in the Spring Mills community, R. C. Blaney, Centre County Agent, secured a trapnested hen and staged an egg production guessing contest. The man who won the prize guessed within five eggs of the number the hen laid. The majority of guesses, however, were over 100 eggs and the hen actually laid but twenty-six. This contest brought out a good lesson in judging hens for egg production.—B.

Keep your grin. You may plant a smile in the furrows which business has cut in the forehead of the other fellow.

White Diarrhea

endid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

rs. Rhoades' letter will no doubt of utmost interest to poultry ers who have had serious losses White Diarrhea. We will let Rhoades tell it in her own ds:

Gentlemen: I see reports of so y losing their little chicks with ite Diarrhea, so thought I would my experience. My first incubat- bicks when but a few days old, n to die by the dozens with ite Diarrhea. I tried different edies and was about discouraged the chicken business. Finally, I to the Walker Remedy Co., Dept. Waterloo, Ia., for a $1.00 box of r Walko White Diarrhea Remedy. just the only thing for this ter- disease. We raised 700 thrifty, thy chicks and never lost a single k after the first dose."—Mrs. l Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

hite Diarrhea is caused by the llus Bacterium Pullorum. This is transmitted to the baby chick gh the yolk of the newly hatch- gg. Readers are warned to be- of White Diarrhea. Don't wait l it kills half your chicks. Take "stitch in time that saves nine." ember, there is scarcely a hatch out some infected chicks. Don't hese few infect your entire flock. ent it. Give Walko in all drink- water for the first two weeks and won't lost one chick where you hundreds before. These letters e it:

ever Lost a Single Chick

rs. I. L. Tam, Burnetts Creek, writes: "I have lost my share of s from White Diarrhea. Finally t for two packages of Walko. I d over 500 chicks and I never a single chick from White Diar- . Walko not only prevents White rhea, but it gives the chicks gth and vigor; they develop er and feather earlier."

r Lost One After First Dose

s. C. M. Bradshaw writes: "I to lose a great many chicks White Diarrhea, tried many dies and was about discouraged. last resort I sent to the Walker dy Co., Dept. 518, Waterloo, for their Walko White Diar- Remedy. I used two 50c pack- raised 300 White Wyandottes never lost one or had one sick giving the medicine and my ens are larger and healthier ever before. I have found this ny thoroughly reliable and al- get the remedy by return mail." s. C. M. Bradshaw, Beaconsfield.

Save those chicks

There is now no question as to the almost miraculous effect of Ful-O-Pep Chick Starter in saving chick lives

The terrific loss suffered by farmers and poultrymen through the high mortality of young chicks is no longer necessary.

The effectiveness of nutritious oatmeal mixed with cod liver oil as in Ful-O-Pep Chick Starter, in preserving life and promoting growth, is now established.

Its results are in evidence on thousands of farms, where these losses have been *wiped out*.

No other factor has ever brought into the poultry industry such sound protection to the farmer's and the poultryman's investment.

Six Solid Weeks of Sunshine

Sunshine, as every poultry raiser knows, is absolutely vital to the life, strength and growth of young chicks.

Dark, cold, raw and rainy days all have their ravishing, death-dealing effects on young broods.

Ful-O-Pep Chick Starter *feeds* the sunshine right into bones and tissues, every day, rain or shine—building strong legs, strong bones, and the rapidity of growth is amazing. Chicks grow indoors as well as out. Feeding Ful-O-Pep Chick Starter the first six weeks of life is just like six straight weeks of uninterrupted sunshine.

Read what this user of Ful-O-Pep Chick Starter says

Gentlemen: March 31, 1924

Always having trouble with leg weakness in raising Baby Chicks in winter time, I was looking for a Chick Starter this season that would keep the chicks on their feet. Seeing your advertisement on FUL-O-PEP claiming something I was looking for—I decided to try it out.

I started three pens, three hundred chicks each, on February 12th. One pen on FUL-O-PEP and the other two pens on two other different feeds. All three pens came along nicely until about ten days, when the two pens fed other than FUL-O-PEP started to go off their feet. The FUL-O-PEP pen came along without showing any signs whatever of leg weakness; so I then changed all three pens on to FUL-O-PEP and I noticed a great improvement shortly afterwards.

Out of 3,000 chicks raised on FUL-O-PEP I saw absolutely no signs of leg weakness and they were indoors for one month. My mortality was not more than 1%. So far I have hatched out and sold about 12,000 chicks which were all started on FUL-O-PEP.

My mortality in former years has been about 20% through leg weakness in early chicks. The difference in mortality this season against former seasons will make a big difference in figuring the yearly profits.

Would highly recommend anyone raising chicks to use FUL-O-PEP—as I consider it a wonderful feed.

Frank L. Simpson, Reading, Mass.

"GOOD EQUIPMENT MAKES A GOOD FARMER BETTER"

These Drills Have Long Been the Choice of Practical Farmers

THE surest way to get your grain drilled right is to use a McCormick-Deering Hoosier or a McCormick-Deering Kentucky. There is a size and type among these drills which exactly meets the requirements of your soil and seed. They are so sturdy and so carefully designed, and are built of such high-grade materials, that they do good work under all conditions, adverse as well as favorable.

McCormick-Deering Hoosier and Kentucky drills have been giving satisfaction ever since the first one was placed in the field, over fifty years ago. They do such excellent work and are so well built that they are preferred throughout the country by farmers who know what quality construction means and judge the value of a machine by the way it stands up and the kind of work it does.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

Crawford County "Sugar Bush

Mr. Stranahan's Syrup Always Tops the Mark

By F. T. Murphey

"MY SYRUP always sells easily," says Mr. H. F. Stranahan, a Crawford County, Pennsylvania, producer of the much desired dressing for buckwheat cakes. "And besides, all my customers come back for more next season."

The maple sugar industry, due chiefly to the fact that its production has been carried on in a more or less haphazard way, has been slowly contracting. In the past it was the custom to put maple syrup on the market, regardless of its quality or flavor. Many of the producers thought little of having a uniform product, and that just because it came from a maple tree, the consumer would be glad to buy it.

To be true they did buy it for awhile, until they came to realize that they were not getting what they wanted. First it would be dark, then light; one year of a strong flavor, the next mild and agreeable; or one lot would sour and next turn to sugar. The buyer of this type of sweet has been forced into a suspicious and "show me" attitude. This state of mind on the part of the buyer is largely responsible for the low scale of prices paid for maple syrup generally.

Trees

TREES point toward the heavens and the high and noble things; they have the green of youth and health and vigor; they grow by the water, by the dusty roadside, on the mountain's top; they nourish our water courses; they shade us from the blistering sun; they bear fruit for our nourishment; they furnish fuel for our fires, lumber for our houses, paper for our wise books and silly newspapers. For every one we cut we should plant two.—Edward Hart, Lafayette College.

Produces Fine Quality Syrup

Mr. Stranahan is producing a product, uniform in color, flavor, and consistency, year after year. He is doing it by the use of careful methods in the handling of the sap from the tree to the finished product. Every gallon that goes out from his farm goes in a standard can bearing his name and guaranteed by him for its quality.

He uses a second-hand thirty-five-horsepower boiler to furnish steam for his evaporator during "sugar season" and to run a small sawmill at odd times during the year. His sugar-house consists of a shed built at the corner of his mill. The boiler and materials for a fire box which he built under it, cost him $115. He did the work himself.

Rigged Up His Own Equipment

With what tools he had on the farm, Mr. Stranahan built evaporator pans, fitted up all steam pipes, and made much of his other equipment. He constructed the main evaporator and the finishing pans of twenty-four gauge galvanized iron. The former is two feet wide by ten feet long, while the latter is three feet square. Both pans have two-foot sides. A hood to cover the main evaporator was made of the same material.

Rivets and solder were used to make the seams water-tight. He set the main pan on a low platform and the finishing pan below and near one end of it. With such an arrangement of the equipment he can draw evaporated sap from the former the latter.

From the boiler one main lead furnishes heat for both the and finishing stages of evapora In entering the evaporating pans steam is forced into manifolds at the bottom and at one end. these manifolds three-fourths pipes lead out, extend around bottom of the pans and enter other manifold. From this, the which is condensed is carried to the boiler thru a pump.

Best Outfit for Syrup Making

The steam pipes in the pans as radiators for the heat from steam. For radiation purposes quired a total of 120 feet of quarter-inch steam pipe. For the vanized sheet iron and the steam tings, Mr. Stranahan estimates outlay of less than $50.

Mr. Stranahan contends that outfit is by far the cheapest that be assembled for the evaporation maple sap. Altho he is running about 800, his outfit will handle heaviest run from as many as buckets. During average runs during the past seasons he can ly figure on evaporating five of sap an hour.

With two men, a four-barrel ering tank, and a team of horses, Stranahan takes care of the flow from 800 pails scattered twenty acres. The sap as it is ered is emptied into an underg storage tank, which is so located it will flow by gravity into the evaporating pan. By means of a valve the sap in the evapora kept at a constant level, a coup inches over the steam pipes.

Gives Good Measure to All

With live steam under eight ninety pounds pressure being fed to the steam pipes, the sap soon gins to dance. As the sap make way over the hot pipes it is ed from a very thin, almost less, liquid into a thicker one which the maple taste is easily cernible. It is then drawn of the finishing pan. Here further ing by steam is carried on until thermometer and hydrometer the syrup shows the proper ency for the market.

The finished syrup is then thru muslin and allowed to cool settle in a galvanized settling From this it is drawn off th spigot, located several inches the bottom of the container, into gallon can for marketing. The is never placed in the final can it is entirely cool and has had of time for settling. The cans filled entirely to the top with space present. Air in the can ly causes deterioration of the Due to the oversize of the gallon can, Mr. Stranahan that he loses about one gallon twenty in over measure. He however, that giving a little measure never hurts anyone's ness.

Steam Evaporation Cheapest

At intervals thruout the "run" sap, it is necessary to remov "sap sand" or "nitre" which pr itates on the steam pipes in the evaporating pan. The only pract way to do this he has found take it off with a chisel. It s that certain "bushes" produce containing a higher percentage this "nitre" than others. Mr. St ahan's operation is particularly b ered with this ingredient.

Since the condensed steam the steam pipes in the pans is run back into the boiler, a great saving in fuel and labor results. After the system becomes well heated very little firing is necessary to keep the steam up to the required pressure. The boiler may be fired for two to three hours at a stretch without additional cold water being injected into it. Mr. Stranahan takes care of the firing of boiler and the syrup making without any other help. According to his figures, he produces syrup at $1.60 per gallon. This figure includes labor costs for himself, teams and hired help.

No syrup goes out from Mr. Stranahan's plant that has the slightest scorched taste or varies from that produced by him in preceding years. The consumers of his syrup come back for more each season and he can always sell to advantage over the general run of producers.

Delaware F. B. Federation

THE Delaware State Farm Bureau Federation is starting on its fifth year of successful organized effort following the recent annual meeting at Dover, with an active membership of about three hundred.

J. D. Reynolds, of New Castle County, was re-elected president of the state Federation. In New Castle County, Frank F. Yearsley, of Hockessin, was elected president for the fifth time. I. F. Smoot, of Seaford, who was a delegate to the annual meeting of the American Farm Bureau Federation at Chicago, was elected to head the Sussex County Bureau, and Ed. Willim, Sr., of Dover, the largest grape grower in the state, was elected in Kent County.

The Year's Program

A very definite and constructive program of work was adopted by the state and county organizations including continued co-operative purchase of feeds and fertilizers on the pooled order plan, a further extending of the operation of farmers' co-operative canneries, and increased support of boys' and girls' club work.

A legislative committee of three members was appointed to look after all legislative matters affecting farm interests with instructions to equal if possible the record of the committee of two years ago which secured the passage of every measure supported by the Farm Bureau.—C.

Still Too Many Brands

FARMERS in Pennsylvania are buying more high grade fertilizer each year, according to the Pennsylvania Department of Agriculture which registers the brands and issues licenses of fertilizer sold in the state. The registrations received and accepted for 1925 by the Bureau of Foods and Chemistry have numbered to date 835 different brands covered by ninety-six licenses.

The tendency for 1925 is in favor of an increasing proportion of sales of high grade mixed fertilizers over the low grade brand, states James W. Kellogg, chief chemist. Reports from fertilizer dealers covering the amount of fertilizer sold in 1924, while incomplete for the total year, show likewise that approximately sixty per cent more of the high grade brand of mixed fertilizer was sold during the year than low grade one.

Read what these Dairymen say about the DE LAVAL MILKER after 4 years' use

"I have used my De Laval Milker nearly four years and it has given perfect satisfaction. I have a herd of 15 Holstein cows which I take care of myself. They are averaging me 10,000 lbs. of milk and 300 lbs. of butter-fat per year. If they were not well milked they could not do that."—*J. A. Griffith, Sheffield, Mass.*

"I have used my De Laval Milker nearly five years and would not know what to do without it; should probably sell the cows. I milk from 15 to 18 cows."—*F. B. Randall, Mt. Sinai, N. Y.*

"The De Laval Milker has given the best of service and has not missed a milking since May, 1920, and we have not had one case of udder or any other bag trouble whatever; not even as much as a caked quarter since we have used it. We are also using a De Laval Separator and it is giving the best of service."—*T. J. Messinger, Columbus, Pa.*

"I have had my De Laval Milker five years and have had no trouble at all with it. My two boys, 12 and 10 years old, can milk just as well as I can with it, and I think it is the best on the market."—*Mark Bogart, Columbus Grove, Ohio.*

"We have used our De Laval Milker since 1921 and have not missed a day yet. It works as regular and safe and sure as a self-binder."—*Will E. Bicknese, Elmhurst, Ill.*

"I am satisfied with the De Laval Milker; it is the best milker I know of. We have had no trouble with it whatever in four years. It is easy to clean, and I like it better than any machine I ever saw. I am milking my cows up to the time they go dry."—*M. Grasser, Marinette, Wis.*

"We have been using a De Laval Milker for the past four years and have not missed a milking so far."—*C. H. Brandt, Council Bluffs, Iowa.*

Thousands of other De Laval Milker users are just as enthusiastic in their praise. If you are milking ten or more cows by hand you can soon pay for a De Laval in time saved and extra milk of better quality produced. Sold on easy terms.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry,
Pennsylvania State College

Milk-making Capacity of the Leading Dairy Bre

A MONTGOMERY COUNTY reader has written asking that I describe the different breeds of cows that give twenty quarts of milk containing four per cent of butterfat.

There are animals in all the different breeds of dairy cattle that, when fresh, would furnish twenty quarts of milk daily. On the other hand, there are few cows of any breed that would average twenty quarts of four per cent milk daily thruout the year.

Holsteins, as a rule, give milk which tests only about 3.5 per cent. Therefore, your requirements put the average Holstein cow out of the question at the beginning. On the other hand, the Guernsey and Jersey cows which produce milk testing from five to five and three-tenths per cent butterfat will scarcely average ten quarts of milk daily under ordinary everyday conditions.

This leaves only the Ayrshire and Brown Swiss breeds for consideration, both of which give milk which averages about four per cent butterfat, but an average cow of either one of these breeds falls far short of producing twenty quarts of milk daily.

There Is No Such Cow

The advanced registry records for these two breeds up to the present time indicate that the average Brown Swiss cow will produce somewhat more milk than the Ayrshire, but it will take an exceptionally good cow of either of these breeds to average as much as twelve quarts of milk daily, therefore, your question appears to be an impossible one for solution.

Twenty quarts of milk daily would be an average yield of 15,695 pounds. If this milk contains four per cent butterfat, it would make an average yearly yield of 627.8 pounds of butterfat per cow. I know of but very few herds in this country, even purebreds that have been bred for many years for high production, that average this high a yield of butterfat. In fact, the average for advanced registry records of the purebred cows that have been tested falls far short of your provisions. The accompanying table gives an idea of the yield for all the purebred cows that have been run for yearly records in the different breeds. This table was compiled January 1, 1924.

Four Factors to Consider

The Holsteins give the largest amount of comparatively low testing milk. The Ayrshires and Brown Swiss come second and third in milk production, respectively. The Guernseys are fourth and Jerseys fifth, and the Shorthorns sixth.

With this information at hand, you can perhaps pick out the breed which comes nearest to meeting your sires.

It should be added that there four important factors in sel the breed. The first is market. you have a market for milk o wholesale basis at so much per dred pounds or per quart, then steins are most desirable, b they give the most milk. On other hand, if you can get a price for milk of extra good q then the Jerseys and Guernseys in for consideration because they duce the richest milk altho in s quantities. The Jerseys and Gue are economical butterfat producers you are making butter. The steins, Brown Swiss, and Shorth can usually be turned in for bee better advantage when they are with their career in the dairy.

The second factor is the topog of your farm. If it is hilly, Ayrsh will do well. On the other han it is level and flat with an abund of roughage, then Holsteins are preferred.

The next factor to consider is breed which is most numerous in community. It is usually desirabl keep the breed which is most nu ous in the community, as the munity becomes well known fo particular breed of cattle.

The fourth factor is personal p erence. A man usually does best the breed which he likes best. A. A. B.

Advanced Registry Records—January 1, 1924

	No. Records	Lbs. milk	Lbs. Fat	Av. test
Shorthorn	1363	8,495	334.8	3.9

The Cows Like Mola

Does the feeding of molasses to dairy cows help to counteract the acid in silage? Would you recommend feeding a home made mixture of cottonseed linseed, gluten feed, oats chop and bran, and then have it absorb all the molasses possible to keep it from getting lumpy?—B. K., Bradford County, Pa.

I do not see that it is very vital attempt to counteract the acid in age. Why worry if it has some in it? A lot of other feeds eaten humans and by cows also have acid in them. Buttermilk and skimmilk have acid in them calves thrive gloriously on feeds. I do not think farmers need worry about counteracting the age acid.

Molasses would tend [illegible] the acid rather than decrease it. T sugar in molasses would under fermentation to some extent in t alimentary tract and would of its tend to promote acid in the digest tract rather than reduce it.

Largely a Question of Price

A homemade mixture [illegible] cottonse meal, linseed meal, glu[illegible] d, o chop, and bran should n[illegible] lum The advisability of using molasses all depends upon its market pr

d upon the condition of the cattle. olasses contains no fat, only one r cent of crude digestible protein, t it does contain 58.5 per cent of gestible carbohydrates. It has obably somewhat less feeding value an corn, pound for pound, and the visability of its use would, there re, depend largely upon its price that compared of corn.

A limited amount of molasses may metimes be used to advantage as appetizer. It may be diluted with equal volume of water and pour over roughage. In this way cows ll be induced to eat roughage hich is rather unpalatable and ere will be less waste with the ughage than otherwise. Molasses n be fed more readily in this way an by mixing it with the grain xture.—A. A. B.

Cream Becomes Ropy

The man to whom I am selling my milk has trouble with the cream becoming ropy. When the customers take the caps off the bottles the cream is like gum. He has taken samples from all his farmers and found the one that causes the trouble. I told him I would write to you and ask what to do about it.—W. A. D., Dauphin County, Pa.

Ropy cream is caused by a certain pe of bacteria. The bacteria that oduce this trouble are usually und in impure water, dust and nure. The action of this class of cteria increases the viscosity of lk which in mild cases simply as mes a slimy appearance. In ex eme cases, however, the milk or eam develops into a ropy consti ency permitting it to be brought t in threads several feet long. imy or ropy milk cannot be cream if there is sufficient infection to ke it ropy before the cream gath .

The method of eliminating this uble is to boil all the milk uten s thoroly for one-half hour. The cteria belonging to this class are sily destroyed by heat as they do t form spores.—A. A. B.

asing Value on Record

Will you please give me information on the following questions?

Give the basis of valuation of Holstein cattle from cow testing association records.

If a cow gives 400 pounds of butterfat under ordinary conditions, what should I expect if I put her on semi-official test?

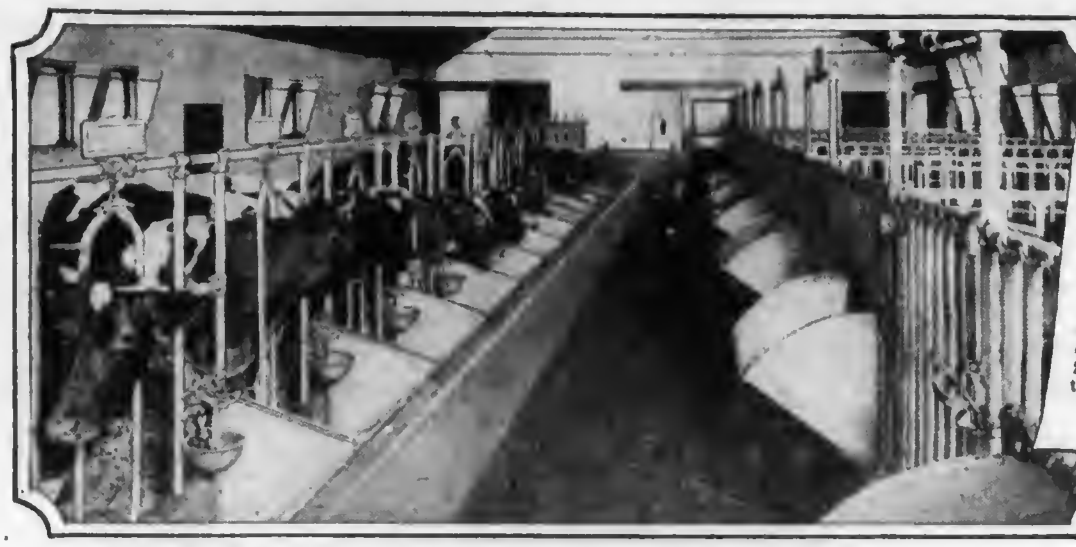
What percentage of increase in milk production can be expected with three and four milkings per day over two milkings; would you feed each time you milk?—B. F., Chester County, Pa.

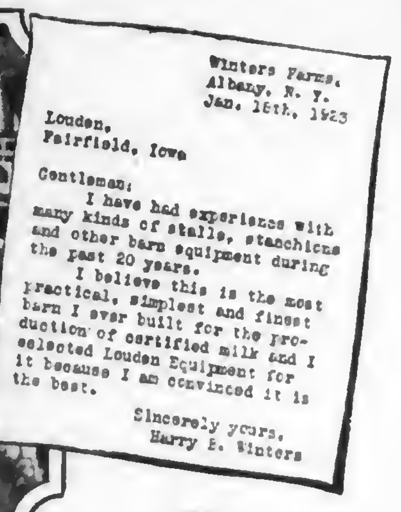
Answering your questions in the der asked, the basis of valuation r cows in the testing association ould depend not only upon their oduction, but upon their type. It likely that a fair valuation for a gh grade cow of good type would somewhat as follows:

early butterfat production	Market price
250 lbs.	$100-$125
300 lbs.	$125-$150
350 lbs.	$175-$200
400 lbs.	$200 and over

It is likely that if a cow gives four undred pounds of butterfat under dinary conditions, she would in ease it from seventy-five to one undred per cent if run on semi ficial test.

Cows milked three times daily pro ce about twelve per cent more lk than when milked but twice lly on the average. If milked four mes daily, they will produce about ghteen per cent more milk than hen milked but twice daily. It ould be desirable to feed the cow ch time he is milked.—A. A. B.





Winters Farms,
Albany, N. Y.
Jan. 16th, 1923

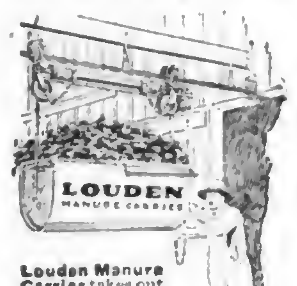
Louden,
Fairfield, Iowa

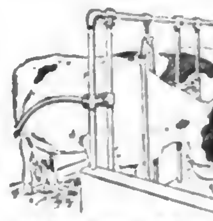
Gentleman:

I have had experience with many kinds of stalls, stanchions and other barn equipment during the past 20 years.

I believe this is the most practical, simplest and finest barn I ever built for the production of certified milk and I selected Louden Equipment for it because I am convinced it is the best.

Sincerely yours,
Harry B. Winters





Piling Up the Evidence

As Director of the Dairy Division of the New York State Department of Agriculture, Mr. Harry B. Winters had an exceptional opportunity to observe barn equipment under all kinds of conditions. The fact that he selected Louden Steel Stalls and Stanchions for his own dairy barns, located one mile out of Albany on the Bethlehem Center Road, is convincing evidence of Louden superiority.

Why have the U. S. Government and thousands of good, practical dairymen in all parts of the country chosen Louden Steel Stalls and Stanchions? One of the biggest reasons is the fact that they are properly designed. Another reason is the exceptionally high grade of material from which they are made.

Comfortable Stanchions Pay Big

The Louden Stanchion holds the cow in her place so comfortably she hardly realizes she is being held. It permits her just that freedom which she must have to get up and lie down without struggling, bruising her shoulders or jamming her knees. Its V-shaped bottom allows it to be used in the feed-saving curb—this alone saves many dollars annually.

Cows have "pasture comfort" in the barn when you use Louden Stanchions. And true cow comfort always brings increased milk yields. Many a high producer has been "discovered" when changed living conditions gave her full ease and rest and let her get every drop of milk and every cent of profit possible from each pound of feed.

The tubing from which Louden Stalls and Stanchions are made is high carbon *Open-Hearth* steel—the strongest and longest-lasting steel for this purpose. Fittings are of *certified malleable iron*, with a tensile strength of 50,000 lbs. per square inch. *Quality material* throughout accounts for the unequalled strength and durability of Louden Stalls and Stanchions.

Correct design and freedom from trouble-making, dirt-collecting attachments have made Louden Stalls and Stanchions the neatest looking and most sanitary. And the patented Louden Interlocking, dust-proof coupling—smooth on top, with no open crack to catch filth and harbor disease germs—is only one of many other exclusive Louden features.

Get Your Copy of This Booklet

Send at once for illustrated booklet telling all about Louden Stalls and Stanchions. C. J. Kraus of North Milwaukee, Wis. says: "I wouldn't trade the Stalls and Stanchions I bought from you 16 years ago for any other make of today." Fill in the coupon now and mail it.

And if you are figuring on building or remodeling a barn, ask for a copy of the Louden Barn Plan Book—112 pages of money-saving building information for farmers. Shows 50 up-to-date barns with plans. Sent postpaid—no charge or obligation. Check and mail the coupon.

"EVERYTHING FOR THE BARN"

WM. LOUDEN
His invention in 1867 of the first hay carrier made possible two-story barns. Later on his origination of modern steel stalls and stanchions made possible the clean, comfortable and sanitary dairy barns now seen on every hand. Always an originator.

Louden Manure Carrier takes out big loads; lasts a lifetime. Easily installed in any barn—old or new.

Louden Water Bowls increase milk flow within 24 hours. Lengthen the lactation period. Save time and work. Quickly pay big profits.

The Louden Line includes Hay Unloading Tools, Power Hoists, Barn and Garage Door Hangers, Manger Divisions, Cupolas, Hog House Equipment, Bull Staff—

Milk Facts —you can't dodge!

You can't get top-notch prices for milk that is not clean, and you can't remove all the dirt from milk by straining it through cloths or fine mesh wire screen.

The only way to get clean milk is to strain it through sterilized cotton. That is why the

Dr. Clark
Purity Milk Strainer

is guaranteed to get ALL the dirt. The sterilized cotton pad tightly clamped to bottom of strainer removes every particle of dirt, dust, muck and other sediment. The Dr. Clark purity Strainer is the only one on the market that is guaranteed to get ALL the dirt. Used and endorsed by largest dairies and milk producers in the country, including Borden's, Van Camp's, Carnation, Mohawk, and Sheffield Farms.

Made in two sizes—10 quart and 18 quart. Ask your dealer or write direct for circular and prices.

Dept. B **Purity Stamping Co.**
Battle Creek, Mich.

As the world's largest manufacturer of cotton discs for milk strainers or filters, we can furnish Purity Cotton Discs in any size from 4½ in. to 7 in. diam. for all makes of strainers. Send for a trial order.

The Story of Bobby and Dutc

"Too Many Proven Sires Are Going to the Butche

SUCCESS or failure of a dairy farmer may hinge upon the selection of the purebred sire to head his herd. Usually there are but two classes of bulls on the market at such prices as the ordinary farmer is able to pay. In one class is the young bull being sold entirely upon his pedigree, his future worth being judged entirely by the official and semi-official records of the dams coupled with his conformation. The other class is not so numerous and consists of the so-called "aged" bulls; that is, bulls that have daughters in milk and whose owners are ready to replace them with animals that can be bred to these daughters as well as to their dams.

Didn't Live up to His Pedigree

The work that has placed so many purebred sires in our herds has been most laudable and every effort should be made to extend their use. And right here I wish to make a statement which has been emphasized repeatedly in our dairy literature, but which can not be stressed too much, namely—"Too many proven sires are going to the butcher." To prove this statement, I wish to tell the stories of two bulls from my personal experience.

> ### Milk Costs
>
> DURING 1924, $2.14 was received for every dollar expended for feed by members of the Columbia County, Pennsylvania, Cow Testing Association. The average total cost of feed per cow was $115.35; the average value of the product was $246.30. The grain cost $59.89 per cow and the roughage $55.46. The feed cost per 100 pounds of milk was $1.59.

One of these bulls I will call "Bobby" and the other "Dutch." Both were registered Holsteins. Bobby was purchased by a neighbor from one of our state university herds as a yearling, being the third bull out of that same herd purchased by my friend. Bobby's pedigree was beyond reproach and because his predecessors had sired high producing daughters, my friend willingly paid $600.00 for him.

Good Type, but Poor Producers

In due time the heifers of this bull began to appear in the pasture and I admired their straight tops and good size. Now let us look at the situation of this herd four or five years after purchasing the new sire. The milking line was half filled with daughters who were far below the productions of their dams.

The cows of this herd originally maintained an average production of 12,000 pounds, and of fifty-seven of the daughters of Bobby kept to maturity, only two ever produced 12,000 pounds, and these were from dams that had records of 16,000 pounds and 17,000 pounds.

To make a long story short, this herd received a setback that took years to overcome. Fortunately, such failures are rare, but we must realize that it is possible in purchasing an unproven sire.

Now for the story of old Dutch. I speak so familiarly of him because he once knocked me half way across the barnyard, leaving me in the most sublime sleep for twenty minutes.

I ran across Dutch when on a p chasing committee for a group dairymen. We were to buy a car of cows and one bull. Dutch seven years old, of good conforma but with no particularly high re on the dam's side of his pedigree. owner was anxious to sell, as already had a new bull to breed to daughters, and told the same story, his herd wasn't big enough keep two.

A Real Bargain

The daughters were straight roomy and the cow testing associa records in the county agent's o showed that as two-year-olds made from 6000 to 7000 pounds dams of 8000 pounds production. every case when mature the da ters were outmilking the dams. as a four-year-old made pounds; her dam as a six-yea made 14,000 pounds.

Needless to say, we purchased proven animal and his good work continued thru another county three years longer, and there fifty dollars between the but offer and the purchase price. Le hope that the relation of these amples will save some noble sire the butcher's block for a few years of profitable service.—J. A.

Test Proven Effecti

FIGURES compiled by the P sylvania Bureau of Animal dustry show conclusively the ef iveness of the area plan by w tuberculosis is being eradicated Pennsylvania herds. In Mercer C ty, for example, a total of 32,887 tle were given the first test and reacted or 2.5 per cent. On the on test only 206 animals reacted a total of 32,722 which is .79 of per cent. In other words, the centage of disease in approxi 33,000 head of cattle was reduced one test from 2.5 per cent to .7 one per cent. It is certain that the present time after the test less than one-half of one cent of the cattle in Mercer Co are infected with tuberculosis.

In Crawford County, the first on the area plan revealed 124 actors out of a total of 47,051 or 2.6 per cent. On second test 396 animals out of a total of 328 reacted, which means a tion in tuberculosis infection 2.6 to .8 of one per cent.

Baltimore T. B. Rul

A RECENT ordinance passed the city of Baltimore re that all producers shipping milk the city shall have made applica for a tuberculin test before Ma 1925. This ruling has created a deal of interest in tuberculin e cation in the southern part of County, according to G. G. W county agent. A series of meetings have been held at the subject of tuberculin testing discussed by Dr. P. C. Clarkson the State Bureau of Animal Ind and as a result several hun dairymen have made application have their herds tested for tu culosis.

Valspar—which color do you want?

Perhaps you've some old furniture you want to renew. Or maybe you're planning to change the color scheme of your room. No matter what color you need, Valspar has it!

Valspar Varnish-Stains. Look at the chart at the left. There you have Valspar in beautiful transparent colors. Valspar Varnish-Stains are made of Valspar Varnish combined with permanent, non-fading colors to give natural wood effects, such as Light or Dark Oak, Cherry, etc.

You stain and Valspar with one stroke of the brush, thereby doing away with the old method of staining and varnishing separately. Valspar Varnish-Stains bring out all the beauty of the grain in the wood. Having all of Valspar's durability, they can be used for all work outdoors as well as indoors.

Valspar-Enamels—shown on the chart at the right. Valspar-Enamels combine all of Valspar's waterproof, wear-proof and weather-proof qualities with beautiful, opaque colors. They are applied like paint, covering wood or metal surfaces with a solid color just like paint—and have the added advantages of Valspar's brilliant lustre and durability. They may be rubbed down to a beautiful dull finish, if desired.

Send in the coupon—today—for samples of Valspar and Valspar in Colors. Be sure to send for the Valspar book which gives a hundred practical suggestions for using Valspar—indoors or out.

Head of the Department of Animal Husbandry, Pennsylvania State College

Swine Troubles Due to Use of Unbalanced Ration

I have two hogs four months old that don't have the right use of their legs. Whenever they stand up they just keep raising their feet up and putting them down all the time. Seems as tho their legs are cramped. They don't have a very good appetite and grit their teeth a great deal.

I cannot get them to move around much. I have them on the ground but nothing seems to do them any good.

Please give me your advice in the next edition of Pennsylvania Farmer and what you think is the trouble with my hogs; also, state what I should do for them. H. M. T., Adams County, Pa.

Since you do not state what ration these pigs have been getting, it is difficult to point out the deficiencies in the ration. It is evident, however, that there is something lacking in the ration of the pigs which causes them to have such poor control and use of the legs.

The loss of appetite, the gritting of the teeth, and the lack of thrift are positive signs that the pigs are infested with internal parasites. The method of treating the pigs consists of feeding them a balanced ration and treatment for stomach worms. Secure some worm capsules from your local veterinarian and give them according to directions.

In addition to giving them this treatment, thoroly clean the pens and provide them with clean, dry sleeping quarters, and a place in which to exercise.

The grain ration should be properly balanced so as to contain plenty of protein. A combination consisting of four parts of corn or barley, three parts of wheat middlings, and one part of high grade tankage or fish meal will meet the body needs of these pigs.

If the barley is fed, it must be crushed or ground. The corn can consist of ear corn, in which case the weight of the cob must be considered, shelled corn, or cornmeal.

If buttermilk or skimmilk is available, it may be substituted for the fish meal or tankage. If the milk is fed it should be allowed at the rate of three pounds of milk to one pound of the grain, exclusive of the tankage or fish meal.

The treatment for worms, the change in feed, and plenty of sunlight and exercise should result in a change in the condition of the pigs in a short time.—W. H. Tomhave.

Pigs Need Exercise

TO G. C. H., Venango County, Pa. —I would suggest that you feed the pigs a ration made up of the following feeds:

Cornmeal or ground barley..	4 parts
Wheat middlings	3 parts
High grade tankage or fish meal	1 part

If you can supply the pigs with skimmilk, it can take the place of the tankage or fish meal and should be fed at the rate of three pounds of milk to one pound of the corn or barley and middlings. The tankage or fish meal can be secured from your local feed dealer.

In addition to the feed mixture suggested the pigs should have a lot for exercise and be allowed plenty of sunlight, and a dry bed as sleeping quarters.

The bowel trouble is no doubt due to the lack of proper feeding, altho piles are in some cases a natural weakness.

It is quite likely that the pigs are also troubled with worms, which adds to their unthriftiness. It will be well for you to secure some high grade worm capsules from your local veterinarian and give these according to his directions. The change in the ration and the management suggested and the treatment for worms should show an improvement in the pigs in a short time unless they have been stunted too long.—W. H. Tomhave.

Johnstown Market Receipts

CARLOT receipts of fruits and vegetables in Johnstown increased from 1640 cars in 1923 to 1845 cars last year, according to a report of the Pennsylvania Bureau of Markets. This was in addition to seasonable produce grown locally and marketed in the city.

Over one-third of the receipts, or 683 cars, consisted of mixed produce. Practically all of these cars originated on the Pittsburgh market, with the heaviest business done during the summer months.

Potatoes formed the next important commodity with 308 cars. This was more than half again as many as the 1923 receipts. The bulk of this increase was due to heavier receipts from the southern and intermediate producing states, altho the late producing areas in Maine, Michigan and New York accounted for at least one-third of the increase. Nearly two-thirds of the receipts were early potatoes from New Jersey, Virginia and states south to Florida.

Grapes from California

Bananas ranked third in amount of receipts with 187 cars, the majority of which came thru the port of New York. Grapes followed with 162 cars, almost three-fourths of which were California stock. Six cars came from Erie County, Pennsylvania, with the remainder from New York and Michigan.

Total carlot receipts of fruits and vegetables in Johnstown during 1924 are as follows: Mixed produce, 683; potatoes, 308; bananas, 187; grapes, 162; watermelons, 90; apples, 86; oranges, 58; peaches, 57; cantaloupes, 54; onions, 29; strawberries, 24; tomatoes, 24; cabbage, 17; pears, 16; celery, 15; cucumbers, 12; sweet potatoes, 10; lettuce, 6; lemons, 2; peppers, 2; pineapples, 2; plums and prunes, 1. Total, 1845.

City-Born Farmers

A RECENT survey of the 160 freshmen enrolled in the School of Agriculture at the Pennsylvania State College showed that one-third of the students come from farm homes and two-thirds come from homes in cities. Twenty-three of the thirty-one freshmen who had vocational training in agricultural subjects in high school expect to return to the farm immediately after graduation or at a later date.—B.

Names that Stand for Rubber Footwear Satisfaction

GOODYEAR "Gold Seal"—Lambertville "Snag-Proof"—for more than fifty years these names have stood for top value in rubber footwear—a statement that is endorsed by thousands of satisfied customers.

The "Gold Seal" line of rubber footwear, made by the Goodyear Rubber Company since 1872, has always held first place where *super-quality* has been demanded. There is no better rubber footwear than Goodyear "Gold Seal".

The Lambertville "Snag-Proof" line of rubber footwear—also made by the Goodyear Rubber Company—offers the best value obtainable in high grade *standard quality* goods.

These names—Goodyear "Gold Seal" and Lambertville "Snag-Proof"—are guarantees of complete rubber footwear satisfaction. Most good shoe merchants can supply you with the brand you want.

Ask for "Gold Seal" or "Snag-Proof" rubber footwear by these names.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

IN THE midst of it all Mr. Hackett arose and tapped his cup with his spoon.

"Oh you merry, God-blessed people," he said. "Michael Henry has bade me speak for him."

The schoolmaster took out of his pocketbook a folded sheet of paper. As he opened it a little, golden, black-tipped feather fell upon the table.

"Look! here is a plume o' the golden robin," the schoolmaster went on. "He dropped it in our garden yesterday to lighten ship. I fancied, before he left, the summer's work and play being ended. Ye should 'a' seen Michael Henry when he looked at the feather. How it tickled his fancy. I gave him my thought about it.

"'Nay, father,' he answered. 'Have ye forgotten that tomorrow is the birthday o' our little Ruth? The bird knew it and brought this gift to her. It is out o' the great gold mines o' the sky which are the richest in the world.'

"Then these lines came off his tongue, with no more hesitation about it than the bird has when he sings his song on a bright summer morning and I put them down to go with the feather. Here they are now:

TO RUTH

"'Little lady, draw thy will
With this Golden Robin's quill—
Sun-stained, night-tipped, elfish thing—
Symbol of thy magic wing!

"'Give to me thy fairy lands
And palaces, on silver sands.
Oh will to me, my heart implores,
Their alabaster walls and floors!
Their gates that ope on Paradise
Or earth, or Eden in a trice.
Give me thy title to the hours
That pass in fair Aladdin towers.
But most I'd prize thy heavenly art
To win and lead the stony heart.
Give these to me that solemn day
Thou'rt done with them, I humbly pray.

"'Little lady, draw thy will
With this Golden Robin's quill.'"

He bowed to our young guest and kissed her hand and sat down in the midst of our cheering.

I remember well the delightful sadness that came into my heart on the musical voice of the reader. The lines, simple as they were, opened a new gate in my imagination beyond which I heard often the sound of music and flowing fountains and caught glimpses, now and then, of magic towers and walls of alabaster. There had been no fairies in Lickitysplit. Two or three times I had come upon fairy footprints in the books which Mr. Wright had sent to us, but neither my aunt nor my uncle could explain whence they came or the nature of their errand.

MR. HACKETT allowed me to write down the lines in my little diary of events and expenses, from which I have just copied them.

We sang and spoke pieces until nine o'clock and then we older members of the party fell to with Mrs. Hackett and washed and dried the dishes and put them away.

Next morning my clothes, which had been hung by the kitchen stove, were damp and wrinkled. Mr. Hacket came to my room before I had risen.

"Michael Henry would rather see his clothes hanging on a good boy than on a nail in the closet," said he. "Sure they give no comfort to the nail at all."

"I guess mine are dry now," I answered.

"They're wet and heavy, boy. No son o' Baldur could keep a light heart in them. Sure ye'd be as much out o' place as a sunbeam in a cave' o' bats. If ye care not for your own comfort think o' the poor lad in the green chair. He's that proud and pleased to see them on ye it would be a shame to reject his offer. Sure, if they were dry yer own garments would be good enough, God knows, but Michael Henry loves the look o' ye in these togs and then the President is in town."

That evening he discovered a big stain, black as ink, on my coat and trousers. Mr. Hacket expressed the opinion that it might have come from the umbrella but I am quite sure that he had spotted them to save me from the last home-made suit I ever wore, save in rough work, and keep Michael Henry's on my back. In any event I wore them no more save at chore time.

TRY THIS NEW SONG

Here is one of the new country-side songs. It was written by Edith Lochridge Reid, widely known writer, and set to music by the famous composer, Charles H. Gabriel. It is reproduced here from the new "Master Country Sunday School Quarterly," by permission of the David C. Cook Publishing Co.

Countryside.

furrows we've trod, O no-ble the spir-it that bless-es our toil! Life springing e-
hov-er a-bout, O Heav-en-ly Nearness, give hearts sweet repose, Bind friendships more
west un-to lands south and north In our Coun-try-side, In our Coun-try-side.
lu-jah from homes where we dwell In our Coun-try-side, In our Coun-try-side.
ter-nal from seed-scat-tered soil, In our Coun-try-side, In our Coun-try-side.
close-ly and love-en-fold those In our Coun-try-side, In our Coun-try-side.

Copyright, 1925, by David C. Cook Publishing Co.

I began to make good progress in my studies that week and to observe the affection with which Mr. Hacket was regarded in the school and village. I remember that his eyes gave out and had to be bandaged but the boys and the girls in his room behaved even better than before. It was curious to observe how the older ones controlled the younger in that emergency.

Sally came and went, with the Wills boy, and gave no heed to me. In here eyes I had no more substance than a ghost, it seemed to me, altho I caught her, often, looking at me. I judged that her father had given her a bad report of us and had some regrets, in spite of my knowledge that we were right, altho they related mostly to Amos.

Next afternoon I saw Mr. Wright and the President walking back and forth on the bridge as they talked together. A number of men stood in front of the blacksmith shop, by the river shore, watching them, as I passed, on my way to the mill on an errand. The two statesmen were in broadcloth and white linen and beaver hats. They stopped as I approached them.

"Well, partner, we shall be leaving in an hour or so," said Mr. Wright as he gave me his hand. "You may look for me here soon after the close of the session. Take care of yourself and go often to see Mrs. Wright and obey your captain and remember me to you aunt and uncle."

"SEE that you keep coming, my boy," said the President as he gave me his hand, with playful reference, no doubt, to Mr. Wright's remark that I was a coming man.

"Bart, I've some wheat to be threshed in the barn on the back lot," said the Senator as I was leaving them. "You can do it Saturdays, if you care to, at a shilling an hour. Stack the straw out-of-doors until you've finished then put it back in the bay. Winnow the wheat carefully and sack it and bring it down to the granary and I'll settle with you when I return."

I remember that a number of men who worked in Grimshaw's saw-mill were passing as he spoke.

"Yes, sir," I answered, much elated by the prospect of earning money.

I left with a feeling of keen disappointment that I was to see so little of my distinguished friend and a thought of the imperious errands of men which put the broad reaches of the earth between friend and friend.

I remember repeating to myself the words of the Senator which began: "You may look for me here soon after the close of the session," in the tone in which he had said them. As of old, I admired and tried to imitate his dignity of speech and bearing.

When I returned from the mill they were gone.

The examination of Amos was set down for Monday and the people of the village were stirred and shaken by wildest rumors regarding the evidence to be adduced. Every day men and women stopped me in the street to ask what I knew of the murder. I followed the advice of Bishop Perkins and kept my knowledge to myself.

My life went on at the same kindly, merry pace in the home of the schoolmaster. The bandages over his eyes had in no way clouded his spirit.

"Ah, now, I wish that I could see you," he said one evening when we were all laughing at some remark of his. "I love the look of a merry face."

I CONTINUED to wear the mysterious clothes of Michael Henry, save at chore time, when I put on the spotted suit of homespun. I observed that it made a great difference with my social standing. I was treated with a greater deference at the school, and Elizabeth Allen invited me to her party, to which, however, I had not the courage to go, having no idea what happened to one at a village party.

I asked a boy in my Latin class to tell me.

"Oh, ye just fly around an' kiss and git kissed till ye feel like a fool."

That settled it for me. Not that I would have failed to enjoy kissing Sally, but we were out, as they used to say, and it would have embarrassed both of us to meet at a party.

Saturday came, and when the chores were done, I went alone to the grain barn in the back lot of the Senator's farm with flail and measure and broom and fork and shovel and sacks and my luncheon in a push cart, with all of which Mrs. Wright had provided me.

It was a lonely place with woods on three sides of the field and a road on the other. I kept laying down beds of wheat on the barn floor and beating them out with the flail until the sun was well over the roof when I sat down to eat my luncheon. Then I swept up the grain and winnowed out the chaff and filled one of my sacks. That done, I covered the floor again and the thump of the flail eased my loneliness until in the middle of the afternoon two of my schoolmates came and asked me to go swimming with them. The river was not forty rods away and a good trail led to the swimming hole. It was a warm bright day and I was hot and thirsty. The thought of cool waters and friendly companionship was too much for me. I went with them.

More ancient than the human form is that joy of the young in the feel of air and water on the naked skin, in the frog-like leap and splash and the monkey-chatter of the swimming hole. There were a number of the "swamp boys" in the water. They lived in cabins on the edges of the near swamp. I stayed with them longer than I intended. I remember saying as I dressed that I should have to work late and go without my supper in order to finsh my stent.

It was almost dark when I was putting the last sack of wheat into my cart, in the gloomy barn, and getting ready to go.

A RUSTLING in the straw near where I stood stopped me suddenly. My skin prickled and began to stir on my head and my feet and hands felt numb with a new fear. I heard stealthy footsteps in the darkness. I stood my ground and demanded:

"Who's there?"

I saw a form approaching in the gloom with feet as noiseless as a cat's. I took a step backward and, seeing that it was a woman, stopped.

"It's Kate," the answer came in a hoarse whisper as I recognized her form and staff.

"Run, boy—they have just come out o' the woods. I saw them. They will take you away. Run."

She had picked up the flail and now she put it in my hands and gave me a push toward the door. I ran, and none too quickly, for I had not

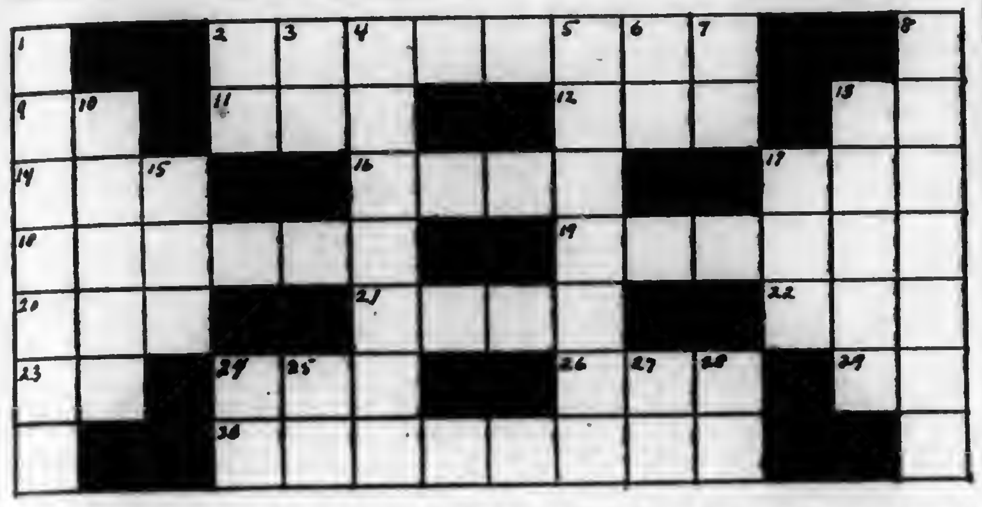
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For examples: 11 (across) is ADO, and 5 (down) is BENEFIT. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

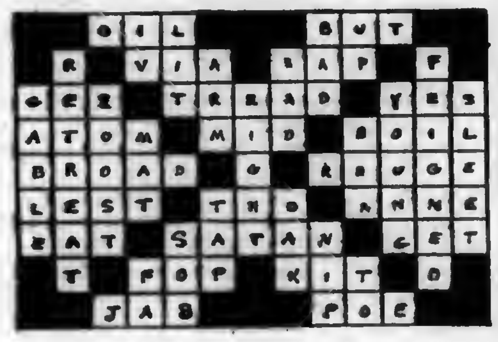
LAST WEEK'S PUZZLE ANSWER



stubble when I heard them coming after me, whoever they were. I saw that they were gaining and turned quickly. I had time to raise my flail and bring it down upon the head of the leader, who fell as I had seen a beef fall under the ax. Another man stopped beyond the reach of my flail and, after a second's hesitation, turned and ran away in the darkness.

I could hear or see no other motion in the field. I turned and ran on down the slope toward the village. In a moment I saw some one coming out of the maple grove at the field's end, just ahead, with a lantern.

Then I heard the voice of the schoolmaster saying:

"Is that you, my lad?"

"Yes," I answered, as I came up to him and Mary, in a condition of breathless excitement.

I told them of the curious adventure I had had.

"Come quick," said the schoolmaster. "Let's go back and find the man in the stubble."

I remember that I had struck the path in my flight just before stopping to swing the flail. The man must have fallen very near it. Soon we found where he had been lying and drops of fresh blood on the stubble.

"Hush," said the schoolmaster.

We listened and heard a wagon rattling at a wild pace down the road toward the river.

"There he goes," said Mr. Hacket. "His companions have carried him away. Ye'd be riding in that wagon now, yerself, my brave lad, if ye hadn't 'a' made a lucky hit with the flail—God bless ye"'

"What would they 'a' done with me?" I asked.

"Oh, I reckon they'd 'a' took ye off, lad, and kep' ye for a year or so until Amos was out o' danger," said Mr. Hacket. "Maybe they'd drowned ye in the river down there an' left yer clothes on the bank to make it look like an honest drowning. The devil knows what they'd 'a' done with ye, laddie buck. We'll have to keep an eye on ye now, every day until the trial is over—sure we will. Come, we'll go up to the barn and see if Kate is there."

Just then we heard the receding wagon go roaring over the bridge on Little River. Mary shuddered with fright. The schoolmaster reassured us by saying:

"Don't be afraid. I brought my gun in case we'd meet a painter. But the danger is past."

He drew a long pistol from his coat pocket and held it in the light of the lantern.

The loaded cart stood in the middle of the barn floor, where I had left it, but old Kate had gone. We closed the barn, drawing the cart along with us. When we came into the edge of the village I began to reflect upon the strange peril out of which I had so luckily escaped. It gave me a heavy sense of responsibility and of the wickedness of men.

I thought of old Kate and her broken silence. For once I had heard her speak. I could fell my flesh tingle when I thought of her quick words and her hoarse passionate whisper. She must have come into the barn while I was swimming and hidden behind the straw heap in the rear end of it and watched the edge of the woods thru the many cracks in the boarding.

I knew, or thought I knew, why she took such care of me. She was in league with the gallows and could not bear to see it cheated of its prey. For some reason she hated the Grimshaws. I had seen the hate in her eyes the day she dogged along be-

Permanent Improvements at Low Cost

You can cut the cost of concrete work practically in two by doing these jobs yourself with a

Handy Farm Mixer

Thoroughly mixes wheelbarrow load per minute. Eliminates back-breaking hand mixing. Keeps each batch clean from dirt. Fully meets the need of covering every particle of sand and gravel with coating of cement to insure high grade concrete.

Putting in walks, steps and foundations; laying feeding and well platforms; hog, chicken house and stable floors; besides mixing feeds and washing root crops—these are some of the many uses to which you can profitably put this labor-saving, money-making equipment.

Durable, long-lived construction is combined with a low price. Furnished as hand or power machine, with or without portable truck. Unmounted or portable machine with light engine power.

See the Handy and get prices at your John Deere dealer's. Write John Deere, Moline, Ill., for literature fully describing this machine. Ask for booklet HM-636

SEED POTATOES Rural Russets, Irish Cobblers, Circular, Seven varieties. I. E. COOK, Munnsville, N. Y.

Our Young People's Forum

From Forum Friends

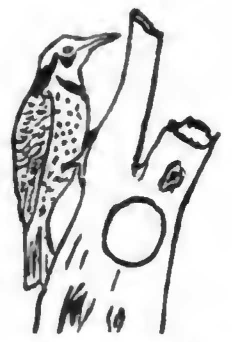
Dear Cousin Ruth:—This is my first letter. I am a girl twelve years old and live on a farm. I go to school at Putneyville. We are going to have an entertainment for Washington's birthday. I have two speeches to say. Our teacher sent for seeds for us to sell. We have a foot of snow here.

I almost forgot to tell you I am in the fifth grade at school. I feed the birds crumbs. Monday is groundhog day.

When we don't miss a word in spelling we get a card and whoever gets the most when school is done gets the prize. We are going to have chicken for dinner. Good luck to the Y. P. F.—Elmo Shreckengost, Armstrong County, Pa.

Dear Cousin Ruth:—I go to Newton School and am eight years old. I am in the second grade. I have one sister and one brother and live on a farm. We have horses and cows. At school I have reading, spelling, language and arithmetic. I like my teacher very much. We have two cats, a dog and a little puppy.

We had a very nice Christmas. I have never seen any letters from Lackawanna County so I thought I would write one. With best wishes to the Forum.—Irene Sholler, Lackawanna County, Pa.



FRIEND WOODPECKER
Charles Mendla, Bucks County, Pa.

Dear Cousin Ruth and Friends:—We have been taking Pennsylvania Farmer for a long time and I enjoy reading the Forum page so much that I thought I would write again.

I am thirteen years old. I like school much better this year than last year. I made ninety-five per cent on the country of Australia. I live on a small farm about two miles from a village called Willow St.

I have two sisters, Grace and Dorothy. Dorothy is seven months old. She is getting fat and she got bigger since I wrote my last letter.

I have two pets, a dog and cat. I call the dog Brownie and the cat, Kitty. We also have a cow and a horse. The horse is another pet of mine. His name is Bob. I can ride him wherever I want to. I thank you very much for letting me join your club.—Blanche Cochran, Lancaster County, Pa.

Dear Cousin Ruth:—This is my third letter to the Forum. We have high snow drifts and good sleighing at present. Because of the blizzards I missed two days of school.

We have taken Pennsylvania Farmer about five years. I like the Y. P. F. page the best, but I also read the Passing Events in Pictures. I have one cat for a pet; she is lame. She was caught in a trap.

I would like to see more riddles on our page. I will send in a few laughters.

TAKING THE JOY OUT OF LIFE

Sign seen on a Chicago boulevard: "Autos will slow down to a walk."

Sign in London, Ohio: "Drive slow and see our town. Drive fast and see our jail."

PERHAPS IT IS

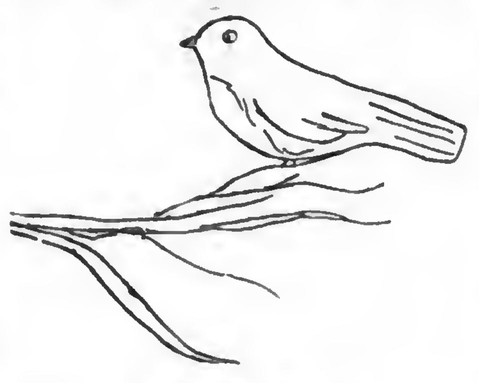
"Ma, do cows and bees go to heaven?"

"Mercy, child, what a question!"

"Why? 'Cause if they don't the milk and honey the preacher said was up there must be canned stuff."

I think this will do for this time. I will try to do better next time. Wishing good luck to all the Y. P. F. friends, also Cousin Ruth.—Marian Fay Buch, Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—May I join your happy circle? My father has been getting Pennsylvania Farmer for two years. I enjoy reading your letters. I am twelve years old and go to school every day. I am in the seventh grade. There are thirty-two pupils in my room, twelve of them are in my grade. I have two miles to go to school. My uncle has a sleigh and takes seventeen pupils every morning and evening. I go to Schaefferstown to school. If the roads are nice my uncle takes us to school in a truck.



A SPRING BIRD
Emma J. Hense, Westmoreland Co., Pa.

I have two brothers and one sister. I live on a farm and the buildings stand in the middle of the farm. The fields are all joined to the barnyard except one.

I did not see many letters from Lebanon County. I would like to see more. Wishing Cousin Ruth and the Forum friends good luck.—Amy G. Breidenstine, Lebanon County, Pa.

Dear Cousin Ruth:—I see you have asked for more riddles so here they are:

1. If your uncle's sister is not your aunt what relation is she to you?
2. What is that which a coach can not move without, and still is of no use to it?
3. When does a man eat two things at a time and still only eat one?—Eleanor Wasson, Centre County, Pa.

Dear Cousin Ruth and Friends:—I have been reading Pennsylvania Farmer for two years and mother said I should write to you and ask you if I may join your club.

I am twelve years old and am in the fifth grade. I like school. I have three pets, two cats and a dog. This is my first letter, I will write again County, N. J.

Yes, indeed, Billie, you are very welcome.

COUSIN RUTH.

Dear Cousin Ruth:—I thought I would write a few lines to the Forum friends. I haven't written for a long time. We live on a farm. I helped out in the field in the summer time. It will soon be time to get the hot houses ready for sowing pepper, tomato and eggplant seeds.

In the winter time I work in the house. I am a girl thirteen years and am in the eighth grade at school. We are making valentines at school this week. We write our names on a little slip of paper and our teacher puts all the names in a box and shakes it up and no matter whose name you get you make a valentine for that person. If we get five correct spelling papers we get a valentine. We had fun last Friday making valentines.

I got our teacher's name; she is from Salem. I like her very much. I go to Sunday school nearly every sunday. We have fifty at our church every Sunday.

We have three Billy goats and two Nanny goats; one is a dear little thing. We have been taking Pennsylvania Farmer for four years. We have a pet rabbit we got for Christmas. I guess this is all for this time. With best wishes to all the Forum friends. — Mildred Bishop, Salem County, N. J.

Dear Cousin Ruth and Forum Friends:—I have been reading Pennsylvania Farmer for two years and think it's a very good paper. I enjoy reading the forum page best of all.

I live on a large farm and like farm life very much. I go to Liberty School and like it. My teacher is the best teacher I ever had. I am thirteen years of age and am in the eighth grade. My seat mate is Sadie Musser. I have eleven schoolmates. There are thirty-six pupils in our school; mostly large ones in the A and B classes. I have five sisters and three brothers. We have horses and cattle and a car. My brother and my sister can both drive it. Two of my classmates are writing to the Forum. I hope they are all printed. Most of my classmates get Pennsylvania Farmer and all think it is a good paper. This is my first letter to the Forum but I hope it won't be my last.

I will write again if this one is printed. Wishing the Forum friends success. — Sara Hosterman, Centre County, Pa.

Dear Cousin Ruth:—We are sending this small poem in hopes of seeing it published.

Spring is coming and the bees are humming,
And we gather flowers all the day.
The grass is growing fast and all the day
We laugh and play, because the spring is coming.

Spring is coming, we can almost see it running.
And the brooks are bubbling o'er the stones.
All the dogs have dug their bones,
And all the children are very happy because spring is coming.

From three Forum members: Grace Munshower, Rebecca Wiley, Ethel Wiley, Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—I am eleven years old and in the fifth grade. I go to Unionville Joint Consolidated School. There are over 700 children go to it. It is not a town school, but a country one. I have seven teachers.

I have one brother and one sister. My brother's name is Horace. My sister's is Miriam, and mine is Marjorie. We are three little wolves.

I have six pets, five cats and one dog. Our dog's name is Towser and the cats don't have any. I live four miles from Kennett Square.—Marjorie Wolfe, Chester County, Pa.

Dear Cousin Ruth and Friends:—I was very glad to get my other letter in the paper. Today was a big day for me. After I had my work done I told them I was going for a walk. I went up on the hill back of here and there I saw deer tracks. I tracked one a ways; found where it had stopped. It came back in the same tracks. I got where there were some pines and heard a great thumping. I looked up and saw a doe coming toward me on the dead run. I stopped to watch it. It did not come more than a couple of yards from me, I guess not that.

When I came home I told my folks. I was satisfied.—Mable Foote, Susquehanna County, Pa.

Dear Cousin Ruth:—My aunt has been taking P. F. for a long time and I have enjoyed reading the letters. I have one mile to go to school. I go every day. I live with my aunt because my mother died five years ago but she is just as good to me as my own mother and father would be. I am fifteen years old now and have been with them three years. Next time I will tell you about my pets.—Harriet Van Nort, Oneida County, N. Y.

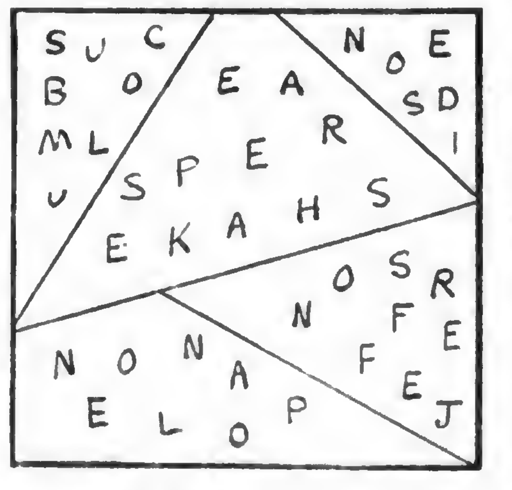
OUR LITTLE FOLKS' PUZZLE CORNER



Dear Little Folks.—It looks as tho the books in the schoolroom had been blowing around, too, but the men whose names you are to find this week are secure, each in his own place both in the puzzle picture and in the minds of all of us. In each of the five sections in the puzzle you will find the name of a great man; one is an explorer, another an inventor, one a great general, another a great statesman and the other a great writer. To help you a little bit, I'll tell you that one of these great men is still living; also that two of them are Americans. When you have found the names send them to me on a POSTAL CARD not later than March 21. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the February 21 issue of Pennsylvania Farmer is: GEORGE WASHINGTON; ABRAHAM LINCOLN.

The prize winners are: Hilda Anderson, age 10, Stewartstown, Pa.; Ellis M. Brumbaugh, age 9, Martinsburg, Pa.; John Corson, age 12, Hughesville, Pa.; Leroy Deremer, age 9, Townville, Pa.; Marian Dietz, age 10, Halifax, Pa.; Arthur K. Groff, age 10, Lancaster, Pa.; Margaret Klynowsky, age 7, Weatherly, Pa.; Elmer S. Myers, age 8, Bareville, Pa.; Martha Warner, age 9, Thurmont, Md.; Veronica Zereski, age 9, McDonald, Pa.

PASSING EVENTS IN PICTURES

1.—Where the bridge between Philadelphia and Camden is anchored on the west side.
2.—The new Senator from Minnesota, Thomas D. Schall, and his wife who is his right hand man. The Senator has lost his sight and depends entirely on Mrs. Schall.
3.—A Chinese bridal pair, decked in their very best for the marriage ceremony.
4.—Our new Secretary of Agriculture, Dr. William M. Jardine, formerly president of Kansas State Agricultural College.
5.—When is a white elephant not a "white elephant?" When you are lucky enough to be a prize winner by modeling one in snow for the Omaha, Nebraska, snow and ice sculptoring contest.
6.—The dog is once more the friend of man—This is the sort of Alaskan dog team which brought the anti-toxin to Nome.
7.—This Indian tepee village at the gateway of Glacier National Park, Montana, is maintained in memory of the Blackfeet Indians who ceded a large tract of land to the United States.
8.—A charming family group—Mrs. John MacMurray, wife of the Assistant Secretary of State, with their three children.

At the End of the Purse Strings

This Trio Wrote the Contest Letters Voted Best

Winner of First Prize

I WAS born in Suffolk County, England. I am the daughter, granddaughter and great-granddaughter of farmers, and have been twice married—each time to a farmer.

My home in the old country was (and is, for my brother owns it now) one of those old moated Halls so frequently found on the farms in East Anglia. It was built about 1556 and has stone-mullioned windows and used to have a draw-bridge until about fifty or sixty years ago.

In 1898 I was married and went to another old Hall, this time with water lilies on the moat, and the upper story projecting over the lower in the old Elizabethan style, and French windows opening onto the lawn. In 1904 I came to Canada with my husband and little boy, two years old. For a year or so we lived near Winnipeg, but kept constantly hearing of the opportunities "west, farther west," so finally we took land where the Canadian Northwestern Railroad had just gone thru on the way to Edmonton.

For one summer we practically camped out (had a small shack for cooking and slept in tents, and our dining room was the great outdoors) whilst our home was building. It was a three-room log house, eighteen by twenty-four, built of logs which were cut on an island in the wide Saskatchewan River and "snaked" up the steep bank by an ox team. It was quite cozy and homelike inside, for I had brought cushions, curtains, pictures, etc., from the old country, and we lived happily there for a few months until—my husband was injured by a fall from the roof of a barn we were building. We were eighteen miles from a doctor. Autos and telephones were unknown. He died in two days and my little boy and I were alone in a strange country. But I found wonderful friends.

Maryland and Then Bucks County

Two years later I married again and, being tired of Canada's snow and ice, we came to the eastern shore of Maryland. But "trucking" was too hard on the back and knees, so we traveled around with real estate agents till I was tired out and stayed at home, whilst my husband came up to Bucks County by himself.

I soon received a wire telling me to come up at once, as he had "found God's country at last." So we bought a farm here in Bucks County, and in spite of having lived a year in sunny California and visited wealthy Iowa, we still consider Pennsylvania the best we have found yet, and hope to stay not far from here until we "cross the bar."—Mrs. Edith Gratias.

Winner of Second Prize

A BEAUTIFUL farm in Ohio was my home for the first fifteen years of my life, after which we moved to a nearby city, where several of us were in high school. I never really left the school room, for when I graduated I became a teacher, and taught for fourteen happy years.

City schools in Ohio and Montana, with one year in the country, were, and still are, a big interest. My summers, too, were busy, for if I wasn't supervising a playground or teaching, I was attending school myself. In 1918 I took up special work at Columbia University, and thru the Red Cross activities at that time decided to go abroad as bedside teacher of crafts in the army hospitals. The glad day of the Armistice interrupted, and I returned to work for four years in hospitals here.

Now I have been on the farm for two and one-half years. My husband is one of the boys of the First Division and works about our chicken-and-fruit farm in New Jersey with an artificial appliance in place of his right leg, which is in the Argonne.

Our Page is such a help to me. I love the farm, farm folks and farm papers, and hope to live here always.—Gertrude S. Stewart.

Winner of Third Prize

I WAS born just the other day, so it seems, on a farm, with a leaning to rhyming and writing. When I was three, I ran around to the kitchen door from play, calling, 'Mamma, mamma, hurry and give me a piece of pie, or else I die!" A neighbor woman, visiting, almost laughed herself into a fit, to my great discomfiture.

There were six other children in our family. Money was very scarce, and I was put to work very young.

I started going to school at five and won the most headmarks in my class for nine consecutive years. At fifteen I was thru our public school and then worked my way thru normal school and college. Teaching paid most of my expenses. In all I taught eleven terms.

Likes the Country Best

Before finishing my education I refused several high school principalships and the leadership of a business college. I love the country better than cities and the school atmosphere.

On our farm I am a jack of all trades. In my other field of endeavor, as in this contest, I have always been an "also ran,"—seldom winning a prize. Besides contributing to Pennsylvania Farmer, I have written articles for a number of other journals and newspapers. I took as my pen name the name of my sister, Mrs. Mary W. Eck. In the case of this contest, I hadn't told her that I was competing, and she knew nothing about it until she received the letter announcing that "she" had won a prize.—Robert I. Weigley.

Ideas for Our Page Cover Whole Span of Life

TAKEN singly, the suggestions offered on the contest ballots for the improvement of Our Page represent many different circumstances and interests. But when put together, they fall into a series of living pictures which might have been taken from the experience of any one of us.

The story that follows is made up entirely of suggestions submitted in the contest, arranged in "life" order:

CHAPTER I

"Should a girl marry, and if so, when and whom?"

"Knowing what you do of farm life, do you want your daughter to marry a farmer?"

CHAPTER II

"Who shall be the boss?" "Should the wife or the husband start the fire?" "Should a woman always stay at home?" "Should farm women vote?" "Should they serve as jurors?"

CHAPTER III

Requests for patterns, fancy work, millinery, designs for couch covers, bed spreads, beauty hints, recipes.

CHAPTER IV

Care of the expectant mother. Care of infants and children.

CHAPTER V

"Who should train the children, —father or mother?" "The difference between city children and country children?" "How shall we interest the children in home and farm?"

CHAPTER VI

"Shall we remove the children's tonsils?" "Our country schools." "How much should parents and children sacrifice for a high school education?" "Tales from school."

Health Articles—Vacations

CHAPTER VII

Short cuts in homemaking and sewing. Spring cleaning. Budgets. A working schedule for overworked, overtired women. "Should the wife help finance the home?" Paying side-lines for homemakers,—roadside markets, jelly-making, etc. "How shall we interest the girls from fifteen to twenty in housekeeping?" "What should young people do Sundays?" "Shall children in their teens be taught to dance or play cards?" "What is to become of the old-fashioned girl?" "Athletics during the school term." "The homemaker's part in Arbor Day, Bird Day, etc." "A fair day's work for a woman with four or more children, and hired men to board and room." "Is the world getting better or worse?" "What privileges did we sacrifice when we married?"

CHAPTER VIII

"Fly proof kitchens." "Home conveniences." "Are home dishwashing machines practical?" Wall and floor coverings. Antique furniture. "Getting rid of junk." Beautifying the home. Gardening. Books. Music. The country church. Table talk. Poetry. Life insurance. Endowment insurance. "Should there be struggling farmers?" "Are unsuccessful farmers justified in trying to keep their children on the farm?"

CHAPTER IX

Law enforcement. Moral and spiritual training. Love of the beautiful. "Is radio hindering church attendance?" Present-day dress. "What is your idea of success?" "What is real happiness?"

CHAPTER X

The man's point of view. "How to induce the laboring man to labor for the farmer?" Tenant farmers. Efficiency indoors and out. Farm and home sanitation. Bachelor farmers and their responsibility.

CHAPTER XI

"What have improved roads and autos done for the farm?" "Are we spending too much time on the three F's,—food, fashion and folly?" "How can the 18th Amendment be enforced?" "What do you think of the Child Labor Amendment?" "Why is there more crime in the U. S. than in any other country?" "At what time should a girl be her own boss?"

CHAPTER XII

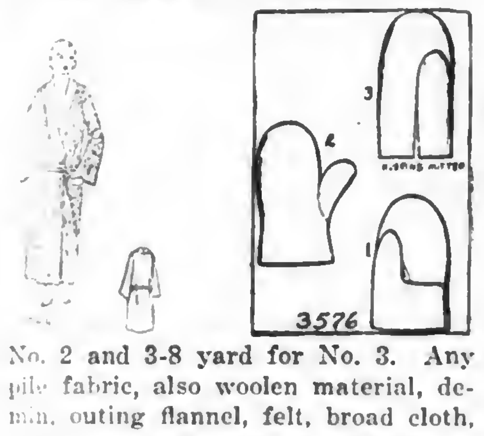
"What provision do the state laws make for a widow whose husband left no will?"—I. S. H.

Housewives Welcome These

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

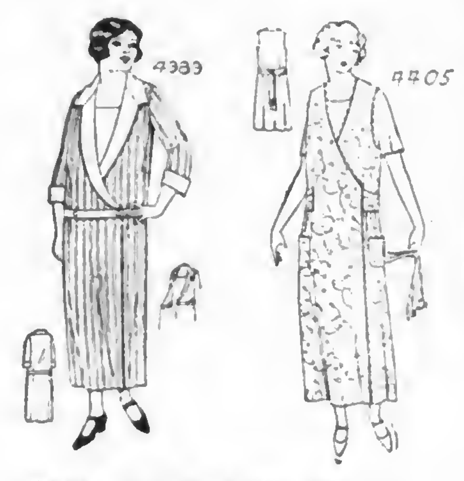
4885.—A Practical Garment.—Blanket cloth, eiderdown, fleece lined flannel, silk and crepe are all serviceable materials for this model. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 6 3-4 yards of 27 inch material. For collar and pocket facings of contrasting material 1 yard 27 inches wide is required. Pattern 10c.

3576.—A Useful Set of Mittens.—Three desirable models, cut in four sizes: small, medium, large and extra large. It will require 1-2 yard for one pair made like No. 1, 3-8 yard for No. 2 and 3-8 yard for No. 3. Any pile fabric, also woolen material, denim, outing flannel, felt, broad cloth, muslin, drill or crash is suitable for these designs. Pattern 10c.



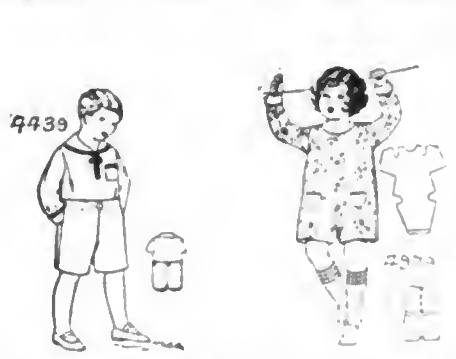
4989.—A Comfortable Dress with Reversible Closing.—Here is a splendid style for the woman of mature figure. It has a comfortable closing —slips on and off like a coat. Gingham, percale, linen or cotton rep are suitable for this style.. Eight sizes: bust measure, 40,42, 44, 46, 48, 50, 52 and 54 inches, and corresponding waist measure, 33, 35, 37, 39, 41, 43, 45 and 47 inches. A 46-inch bust will require 4½ yards of 36-inch material, with seven-eighths yards of contrasting material to face collar, revers, cuffs, vest and belt. The width at the foot of the dress is 1⅞ yard. Pattern, 10 cents.

4405—An Attractive Apron Model. —No buttons or snap fasteners to be considered, easy to adjust, so easy to launder—and withal so comfortable and neat. An ideal apron, indeed. The pattern as here shown was developed in figured percale, and trimmed with rick rack braid. The style is good for all apron materials. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4⅝ yards of 36-inch material. The width at the foot is 2¼ yards. Pattern, 10 cents.



4439.—For a Small Boy.—To be comfortably dressed, adds much to the joy of your boy's playtime. This suit is easy to develop, and is suitable for flannel, linen, gingham and khaki. For warm weather, pongee or linen would be attractive. Three sizes: 2, 4 and 6 years. A four-year size requires 2⅜ yards of 32-inch material. Pattern, 10 cents.

4979. — One-piece Rompers. — A very simple practical style is here portrayed. It may be made with or without sleeves. Figured percale, gingham or linen could be used. Four sizes: 2, 4, 6 and 8 years. A four-year size, if made with sleeves, requires two yards of 27-inch material. Without sleeves it requires five-eighths yard less. Pocket and cuffs of contrasting material require one-quarter yard. Pattern, 10 cents.



Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

PLAYTIME PROBLEMS

Here's the Answer to Questions That May Arise

HAVE you ever tried to lead games at a party, or get up sports for a church picnic, or direct an amateur play? Then you know that helping other people to have a good time is hard work. Even in the home mothers know that finding ways to keep the children amused is a constant tax on their ingenuity. Often it would be a great help to have the advice of an authority in these matters and to know how they have been managed successfully in other towns.

Where You Can Get Play Pointers

Very few small communities are included in the 680 American towns and cities which now employ trained leaders of recreation. Thru the mail, however, the most out-of-the-way town can always receive expert advice and suggestions from the Playground and Recreation Association of America, which for nineteen years has been helping cities to secure playgrounds and start recreation activities.

The association maintains at its headquarters, 315 Fourth avenue, New York City, a correspondence bureau, which is glad to answer, without charge, questions on any phase of recreation.

The association is constantly answering questions about children's playgrounds, community singing and other forms of community music, amateur dramatics, pageants, outdoor sports, recreation in the church and in the home. It maintains a library of information on all phases of play and recreation and can recommend the best books and pamphlets on recreation subjects. A number of practical handbooks and bulletins are published by the association and sold at cost.

Theodore Roosevelt, who was the first honorary president of the association, said: "This country will not be a good place for any of us to live in until it is a good place for all of us to live in."

An increase in outdoor games and social gatherings is making towns all over America better places to live in.

A housewife with an inquiring turn of mind has discovered that popcorn may be shelled on a grater.

No sermon can touch the oratory of a life that is worth while.

for WALLS

Old Homes
Need not be old-fashioned

No one need guess that your home is an old one. The walls, ceilings or the arrangement of rooms can easily be made new and modern by using Beaver Fibre Wall Board. These economical and durable panels of spruce fibre are light and strong, easy to handle, easy to apply, easy to decorate and, best of all, easy to buy. They are nailed right over old walls and ceilings without muss, fuss or litter. Send for a free sample and a copy of the Beaver Plan Book. Learn what Beaver Fibre Wall Board can do for the old home.

Insist on genuine Beaver Fibre Wall Board

The genuine is best because it is stronger. It will not fall or crack. It is seasoned and the art mat surface primed at the factory. Every panel of the genuine is stamped with the Red Beaver Border. *See your dealer for particulars.*

A good old Friend

Remember the good old-fashioned mustard plaster Grandma used to pin around your neck when you had a cold or a sore throat?

It did the work, but my, how it burned and blistered!

Musterole breaks up colds in a hurry, but it does its work more gently—without the blister. Rubbed over the throat or chest, it penetrates the skin with a tingling warmth that brings relief at once.

Made from pure oil of mustard, it is a clean, white ointment good for all the little household ills.

Keep the little white jar of Musterole on your bathroom shelf and bring it out at the first sign of tonsillitis, croup, neuritis, rheumatism or a cold.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

35c and 65c jars and tubes; hospital size, $3.

YARD LONG BEANS

THE YARD LONG BEAN is an excellent variety as well as being an interesting curiosity. The vines are rampant growers and produce an enormous crop of long, slender pods, many of which grow to three feet or more in length, having the thickness of a lead pencil. Produce late in the summer, very productive, excellent quality for snap beans, tender and of fine flavor. Packet of seed 10c; 3 for 25c.

Japanese Giant Radish

18 to 30 lbs. each; Jumbo Pumpkin, 100 to 300 lbs.; Lima Peas, as large as Lima Beans; Vine Peach, fine for canning, ripe fruit in 80 days after seed is planted; Garden Huckleberry, a big crop of fruit the same season seed is planted; Burgess' Earliest and Best Tomato, earliest and best tomato on earth.

Take your choice of these varieties at 10c per packet; 3 for 25c; or all 7 for 50c, postpaid. Copy of our new book, which tells all about other rare, scarce, curious and valuable fruits, vegetables, flowers and plants, SENT FREE.

What's the Matter with Jenny?

Neighbor Brown's Wife Gets Along All Right

"WELL, this is the third kettle of boiling water, and this old pump seems as frozen as ever. Here it is the middle of the forenoon and I have hardly gotten the work started yet, what with heating water, thawing out this pump for cistern water, and thawing the pump in the well for cooking water, I have spent enough time to have done the morning work.

"And they do say the landlord has gone to Florida to spend the winter. Little he cares how we poor farm women spend our winters, how we must thaw out old worn-out pumps, tramp thru drifts for want of a phone, and even dispense with the full bath for want of a warm room in which to take it."

Landlords Count the Cost

Mrs. Jones is the wife of a share farmer. The farm is owned by a rich man and the farmer gets a share of the proceeds for working the land. The landlord generally counts the cost many many times before supplying the farmer's wife with labor-saving equipment. Only the barest necessities are provided. Landlords often fail to practice the "Golden Rule," and this makes the life of such farm women far from pleasant.

"But what is the use of grumbling? He is there and I am here and this old pump is here and has to be thawed out. Only one more kettle of water in the house, too." Thus Mother Jones' talk flows on and on, a habit acquired while at the monotonous work that never ends. With the last kettle of bubbling water she again attacks the offending pump. With horror she sees the water going without success. The handle is as stubborn as ever. Oh joy! just when all seems hopeless the handle gives and water comes.

"Now to get some heated quickly for those dishes and chickens. Well, the hens must have theirs first, should have had it long ago. The water for the dishes can heat while I take this to the hens."

The Hens Must Be Cared For

The hatching hens for the early broods must be fed, watered and seen back on the nests. Back she comes to the kitchen. All this time the fires have been taking care of themselves.

"Now the fire is almost burned out, I must chase to the cellar for coal!" Back she comes puffing, for carrying a big scuttle of coal is hard work. She peeps into the living room to see what the children are doing. "Well, that room looks like a cyclone struck it, but the poor dears must do something when left so much alone."

Quietly she closes the door, so they will leave the kitchen clear and let her work undisturbed, for much is to be done before dinner.

She starts the fire, attacks the huge stack of dishes. Glasses, cups and saucers, knives and forks and plates done, she glances up to see how much time she has before dinner. Horrors! It is almost time now and all those pans yet!

There's Meat but Little Coffee

She frantically seizes a plate and knife, rushes to the meat house. Here she must do some brain work as well, meat must be selected that will cook quickly, with so little time. Meat on the stove, she starts to make coffee, finds the can almost empty. "If I only had known that before the children went to school, now we will be out before tomorrow evening."

Next another trip to the cellar for vegetables and fruit, some in jars and some to be freshly prepared.

"Dinner on the stove, but I have not had time to tidy up the house or myself, for now I must finish those pans and set the table for dinner."

Father's Trip to a Neighbor

Meanwhile father has been over at neighbor Brown's on an errand. Mrs. Brown, neat and tidy, is leisurely preparing the dinner. When she wants water hot or cold, she turns the faucet and uses all she needs. Her dishes were washed and chickens watered while Mrs. Jones was heating water and thawing pumps.

She, too, when making coffee discovered the can almost empty, but she went to the phone and, calling the grocer, said, "Will you please send some coffee by the school children? I will send the money by them in the morning."

Dinner at Home

Farmer Jones, seeing dinner almost ready at the Browns', says, "I must go, mother will have dinner ready, too." When he reaches home he takes a look at the kitchen, the disheveled, worried mother. "Why, Mrs. Brown had dinner just about ready, and as neat and trim, too, as her house was! What a difference in women. Why, Jennie, what have you been doing?"

Jennie looked up, with an agonizing cry, said, "WHAT HAVE I BEEN DOING?"—and crumpled down beside those pans, sobbing and sobbing. Father gazed at her, turned and walked out. "What ever has come over Jennie? She is getting to be such a baby."—A. S.

A Full Day's Work

TO MAINTAIN speed and accuracy women are beginning to make periodic short rest periods a part of the day's program. Instead of saying, "Today I shall be too busy to rest," housewives are realizing that the fuller the day, the fitter the worker should be.

This is a step in the right direction, but it is only one step. Housewives have still much to learn from modern industrial plants in the business-like use of woman-power. One of our high-class laundries shuts off its machinery for five minutes every hour and requires its workers to sit and rest until the machinery starts again. The purpose of this rule is to turn out more and better work with less effort.

Penny Savings—Dollar Investment

Rest periods once an hour, used in a business-like way, are not intended to replace vacation periods once a year. The former is a penny savings bank, the latter a full-fledged investment. Both are for the purpose of making the worker more efficient.

When home-makers fully accept the fact that it pays in dollars and cents to keep themselves fit, they will begin to list well-spent vacations as savings instead of as expenses.—I. S. H.

"Yes, when she wasn't looking I kissed her."

"What did she do?"

"Refused to look at me for the rest of the evening."

Second Lesson in Reed Work

We Make a Waste Basket with a Wooden Base

NOW that you have had an opportunity to become familiar with the handling of reed, you are doubtless ready to learn how to go about making a waste basket. You will need the following materials:

1. An 8 or 9-inch basket bottom of wood with an uneven number of holes. The 8-inch bottom costs 10 cents if bought at a basket supply house, and has 21 holes.

2. As many spokes as you have holes. These should be 18 inches long and should be "No. 4 large, American." Those of you who have sent for the price lists will be able to check this up. You will see that there are three grades on the market—"extra white," "prime," and "second."

3. Weavers of flat reed, and of round reed (No. 3½). Prepare your spokes and weavers as directed in the February 21st number.

At the Start

Push the spokes thru the holes in the base, so that you have 2-inch-long ends on the under side of the base. Hold the base with these short ends up, and bind them off as follows:

Take spoke 1 (beginning at any spoke you choose), bring it in front of spoke 2, and behind spoke 3. Now take spoke 2, bring it in front of spoke 3 and behind spoke 4, and so on clear around. When you get to the last spoke, push it to the outside thru the first turned-down spoke and to the inside thru the second turned-down spoke. (Widen the opening for this with your nut pick.)

This completes the base of your basket. Now turn the basket over, with the long spokes up. Fasten a weaver of flat reed by pushing the end into one of the holes back of a spoke. Weave 8½ inches, using hte "one over, one under" weave described in the first lesson. When you come to the end of a weaver, join a new one by lapping it over for about 2 inches.

"Triple Weave"—How It's Done

Now take three pieces, each two yards long, of the round reed weavers. Put the ends of these weavers into the spaces back of three adjoining spokes. Weave one and one-half inches of "triple weave." To do this, take the weaver that is farthest to the left; bring it to the right over the two other weavers, behind the first empty spoke, and out. Continue this until you have 1½ inches of triple weave.

To join round reeds, push the short end of the weaver that is used up, inside the basket. Then push the end of the new weaver on top of it thru the space thru which the old weaver would have come out.

Finished with a Border

Finish your basket with a border by bringing each spoke behind the spoke next to it, on the right, in front of the two beyond that, and down inside the basket back of the third spoke to the right. Don't pull too tightly when you begin the border, or you will have trouble in weaving the last part of it.

The rings are made by taking a 1½-yard piece of the round weaver for each ring, looping it over four fingers, and winding the long end round and round over the foundation loop.—H. H.

Change of Color at Little Cost

GARMENTS will in time become faded. We sometimes like a change. One may tire of white and prefer a slight tint. If dyes have been in disfavor, it was most probably because they were crude.

The first point in all dyeing is to have the garment absolutely clean. Washing in hot suds will not only remove all grease, but will possibly extract a little of the original color.

What You Can't Do with Dye

One must never expect to be successful in coloring dark goods a light color. One can paint over a dark color and get a light one, but a dark blue cloth can never be made into anything but dark blue or black.

Sometimes it is desirable to boil or bleach out some light shade in order to have a clear ground.

Again, the light shade may help in making another even more attractive. For instance, if one wants peach color instead of the old yellow blouse, a dip into a weak pink dye will give the soft shade desired.

Color Combinations

Pleasing combinations of the soap dyes can be worked out almost indefinitely. These, if wisely chosen, are softer and more artistic than pure colors. Some knowledge of colors and combinations is necessary to blend properly.

Red, yellow and blue are the primary colors. Red and yellow make orange; red and blue, purple; and yellow and blue, green. Orange, purple and green are secondary colors. In the blends, mix a primary and a secondary to gain softness. Modify the crude colors, and you will be delighted with results.—B. L. P.

A Way to Make Quilts

FOR three days it snowed, rained, sleeted, blew—at last filling the roads full in places. School-going was out of the question. Even the teacher in the family had to abandon the idea for the day.

Now was the time for the task that had been waiting for just such a day, when there were other hands than mother's to cook and wash dishes. It is so much pleasanter to do a long task without interruption. So I made a trip to the attic and assembled all the worn coats and trousers.

While busily ripping them apart, son, who had braved the drifts to get the day's mail, came in. All work stopped for a time to look over the mail. I selected Pennsylvania Farmer. The first thing I saw on our household page was the quilt block. I thought maybe some one would like to know my way of making comforts—not only pretty, but warm and durable.

I first cut large squares from all the good material, then a smaller size, and even a third size. By this time there was very little waste material left. These aquares I basted and sewed on an old worn blanket, after which I briar-stitched or cat-stitched all seams in a bright cotton, preferably red. The lining was made of bright-colored outing cloth.—A. S.

"Standard" PLUMBING FIXTURES

The Basis of Health

Most welcome of all modern conveniences is that most desirable of personal comforts—a modern, sanitary bathroom. It provides refreshing cleanliness after a day's strenuous, dusty work in fields or barn.

Properly equipped, it is now recognized as one of the greatest aids to family comfort and health. Send today for our free book, "Standard" Plumbing Fixtures for the Home.

Answering Those Questions about Child Labor

I WILL be very glad to answer the questions addressed to me in the issue of February 21st, if I may have space to give my reasons for being opposed to the child labor amendment.

I have read the amendment. I know the history of the child labor movement, all the facts stated by my questioner.

I am exceedingly sorry that persons under sixteen are working in mines and quarries, or more than eight hours a day. But until living conditions are improved in certain sections such employment is decidedly the lesser of two evils. If my mountain home was as bare of necessities as some of the mountain homes of the South, if Father were ill or the brood larger than he could feed, I would choose sending a boy of fourteen to the mine rather than sending my children hungry to bed.

Faith in Our Legislatures

I am very glad that in this amendment fight the people of this country have given the women lobbyists at the national capital to understand that they have more faith in their state legislatures than in a congress to which these women are trying to dictate. There are women high in the councils of the League of Women Voters that are engineering a social lobby that makes the American soul of me sick. I think that is straight from the shoulder. I meant it to be.

In my love for children I try not to let sentiment entice my common sense off for an aeroplane joy ride. There are many boys of fourteen much more able to work ten hours a day than their fathers. I saw a man of sixty and a boy of fifteen making the hay on a Pennsylvania farm. The boy came in on his toes, ready to fish until midnight. The man found the easiest chair on the porch trying to rest a bit so he could sleep, when he hit "friend bed." Youth is the most dynamic thing in the world.

Three Boys from the Mines

I am going to tell of three Pennsylvania mine boys for the benefit of those who think that work stunts the brain and dwarfs the body. They worked in the coal mines in the days before there were child labor laws. Their father had a little mountain farm in Westmoreland County. Their mother was the daughter of a country preacher and ambitious for her children.

Between school,—terms were short forty-five years ago,—these boys worked in the mines. When money enough was scraped together these boys went to a little college in Indiana. The oldest brother obtained his Ph.D. from his alma mater and later a degree from Yale. The youngest brother, a Latin teacher, has an M. A. from Harvard. The third brother is a Congregational minister. All the help they had from home was their father's faith and their mother's prayers. It is a long way from a coal mine to a Ph. D. The boy who made the climb broke all the child-labor regulations to smithereens.

The small college they entered was a nonentity in athletics. The three brothers made the football team. That football team licked Indiana University, cleaned up Purdue, and claimed the championship of Indiana. It never happened before, it has never happened since. That was in the days when they treated 'em rough. But these three coal mine runts were given the credit for the victories.

Couldn't Work Today

Today they could not work in a Pennsylvania mine, but to have taken from them work, was to have taken from them opportunity. The same thing may be said of millions of America's successful men and women, including most of our presidents. If the father had had to support and educate his family without its help, those boys would be in coal mines yet.

I am asked, "What would be the use if parents lived in Georgia?" The southern states are not conscripting children for the mills, the mines, the quarries. They are simply not barring their doors against the children of the poor. My sister, whose husband has a good salary, is bringing up her family in Georgia. She pays thirty-five cents a quart for milk, which she boils to be sure it is safe food for her baby. It is easier to raise ticks than calves in Georgia.

I am glad there was this mention of the South. My most burning opposition to the amendment was the fact that it was aimed quite as point-blank at the South as those cannons were aimed at Ft. Sumter the day the big fray started.

Sympathy for the South

I am not a southener, but I have much sympathy for the South. My father and five uncles were Union soldiers. Two of my uncles are sleeping their long youth away in warm southern soil. But we were not imbued with hatred.

I sat on a bunk in an army tent at Camp Mills by the side of my baby brother, who was soon to go to France with the Rainbow Division. He and a nephew and a friend had enlisted at Dallas, Texas, and been sent east from Camp Bowies with the 117 Supply Train. This 42nd Division was drawn from many states. Camped next to them was the heavy artillery from Indiana. These "big guns" liked to sing. Every evening they'd tune up. One of their favorites was "Marching thru Georgia." When that started, gloom like dark night settled on those Lone Star boys. One evening my brother couldn't stand it. He walked down to the singers.

"Fellows," he announced, "I hate to butt in. I'm a Hoosier, too. My Dad was South three years with the 189th Indiana Volunteers. I always thought 'Marching thru Georgia' a grand song. But these fine buddies from Texas take it like a funeral dirge. Could you cut it from your repertoire?"

"Sure. We'll substitute 'Dixie'."

What It Meant Down There

We have been gayly singing for sixty years: "So we made a thorofare for freedom from her train, Sixty miles in latitude, three hundred to the main." Never once have we stopped to multiply. Eighteen thousand square miles of devastation thru the heart of the south. It staggered them, it defeated them, they haven't recovered from it yet. They have had to reclaim their land, reconstruct their agriculture, main-

(Continued on next page)

Two Sides to Sunday Selling

(Continued from page 2)

So, therefore, we are obliged to keep the Sabbath holy and not use it for gain and serve man when God comes first. If it were not for the love of money, folks would not want to work on God's day. If all people used the Sabbath as intended there would be no buyers. Most of the Sabbath buyers could just as easily provide the things on Saturday. For if they are able to own cars to travel on Sunday they are able to obtain fresh vegetables at home. There are farmers who would be glad to have reliable steady buyers for their vegetables, dependable every-week buyers.

The one who keeps the roadside market open on Sunday sets a very harmful example to the younger generation.—A Reader, Perry County, Pa.

Dollar Is Getting Too Big

IN REGARD to Doctor Fletcher's article on marketing of fruit, and as one who is interested in the social and spiritual state of his fellowman, would say I was very glad for the young Pennsylvania grower's stand in closing his market stand Saturday for over the Sunday. Let me say that it seems the dollar is getting so big in our sight we can hardly see beyond it to the much greater need of our soul's eternal welfare. Why not all of us help to check this mad rush for money and pleasure and quietly assemble ourselves in our respective houses of worship on the Lord's day?

Let us not abuse these earthly blessings which our Creator is blessing us with that He may see fit to continue to bless this land as in the past.—J. E. L., Lancaster County, Pa.

Cannot Serve Two Masters

THERE is much to be said concerning this subject, but we should all be guided by the law which was given to humanity, as a guiding star, which says, "Remember the Sabbath day, to keep it holy." There is no other way to interpret this command.

We all know there is a great deal of work we are compelled to do on Sunday, which cannot be neglected, but the picking and selling of fruits, and vegetables, of any kind, on Sunday, is in direct opposition to that command, and we cannot serve two masters.—W. B., Bucks County, Pa.

Saturday Real Sabbath

WHAT is Sunday? The first day of the week, the best day of all the seven to buy or sell. You may read the Bible from Genesis to Revelation and you will not find a single line authorizing the santification of Sunday. God knew man would change His law and He said: "For verily I say unto you, Till heaven and earth pass one jot or one tittle shall in no wise pass from the law, till all be fulfilled."—Matt.5-18. Therefore, no one is breaking God's law when he sells vegetables and fruit on Sunday. But he breaks the law when he does the same thing on Saturday, the seventh day.—A. M. S., Sussex County, N. J.

Interferes with Church

PERHAPS many of us fail to grasp [illegible] of "logical argument" as [illegible] "platitudes," etc., but sure[illegible] is abundant reason for the [illegible] of roadside markets on Sun[illegible]

We never have had a roadside market ourselves, tho we have sometime [illegible] thought of it. The market won't m[illegible] itself and some one must [illegible] with it. Obviously, whoever stays can't attend church unless the market closes. One market in a community might be negligible in its influence, but if one man has a right to use the Sabbath in this way, every other man has the same right, and if every farm had an open market on Sunday what would become of the country church?

The open market might be financially profitable because of the Sunday tourist trade (tho I doubt if it would) but every public spirited citizen who honestly believes in community betterment will close his market as surely as he puts away his plow or his mowing machine on Saturday night.—E. M. A., New York.

Each to His Own Trade

CONGRESSMAN TEMPLE, of Pennsylvania, tells of a son of Ham in his district who was caught with a number of chickens in his possession that belonged to a prominent citizen.

It was brought out at the trial that the fowls were abstracted from the hencoop in a most peculiar manner. The place was not broken into at all. The lock was not tampered with. Everything in the morning was exactly as the owner had left it the night before, but when the door was unlocked the coop was empty.

Perplexity was written all over the features of the judge as he told the prisoner to stand up.

"Sam," he said, "there is no doubt in my mind but what you stole these chickens. But I am puzzled to know how you got them without breaking the lock or smashing a board. If you'll tell me how you worked this scheme I'll agree to give you the lightest possible sentence under the law."

The darkey pondered for a full minute, and scratched his head considerably. Then slowly turning to the judge, said:

"Mistuh Jedge, yuh honah sah, I knows y'all means to be kind and nice to me, an' I suah does 'preciate it, but ah done reckons y'all bettah stick to y'all's perfession an' I'll stick to mine."

Child Labor Questions

(Continued from preceding page)

tain two sets of schools, and courteously reject a lot of free advise from Yankees.

If Smyrna was in flames, if Tokyo was falling into the earth, we'd get busy. We have had little concern for the South. They are not asking alms.

If Congress or the women want to help the children of the South, they might finance their schools, combat their insect pests, equip their farms, reduce freight rates, (hang a few of the sugar trust for an horrible example). By the time this program is out of the road the South will have made her own laws.

Future Looks Bright

It takes money to keep idle children out of mischief, to educate them, to feed, and to clothe them. That's the one thing the South is not lousy with. They are making great strides in agriculture, in manufacturing. Fifty years more will see great changes. When the rural homes of the South have electric razors to "saw 'em off," the boys will play more baseball and do more fishing. Then the zealous women mentioned by our New Jersey friend will not have to take the South by the nose and pour their ideals down its throat.

I, for one, am not anxious to coerce the South. She will fight, and she is hard to lick. Moreover, between friends, she is a wee bit stubborn. "Ahl-ah-bah-mah twenty-four for Underwood."—Nora Del Smith Gumble.

A Bag of ALPHA CEMENT

on the job means that you are building in the most substantial, economical and permanent way.

For a bag of ALPHA binds several cubic feet of sand and twice as much stone or gravel into a "cast stone" improvement that grows stronger with the years—never rusts, rots, burns or requires painting.

Fresh for supper!

You never know just how good really fresh sweet corn can taste until you grow it in your own garden. Or tender, melting peas only a few minutes from vine to table. That's something money can't buy.

Figure, too, how much a real home garden is worth in actual cash, estimated conservatively at $150 per year. Lay your plans to have a garden this year. First of all get a Planet Jr. Seeder or Planet Jr. Wheel Hoe or both. You drill grain: why not *drill* your garden seed? You cultivate your row crops: why not cultivate your garden?

The Planet Jr. No. 17 Single Wheel Hoe shown here is a miniature 3-shovel cultivator that weeds and cultivates your whole garden in but a fraction of the time it takes with the old hand hoe. Takes a variety of attachments, as hoes, discs and plows for making seed furrows and tilling. Be sure to have a garden [illegible] famous Planet Jr. Implements. Get the new Planet Jr. Catalog—from your dealer or from us.

Markets

PHILADELPHIA MARKETS

PRODUCE

March 9, 1925.

During the past week the volume of supplies of new potatoes from Florida and asparagus has increased quite a little and the prices on these commodities are much lower. Supplies of old carrots and parsnips are fairly liberal, and we also have quite a few southern new carrots on our market. There has been an advance in the price of new cabbage during the past week of about 25c per hamper, but old cabbage continues slow and dull at practically unchanged prices. Old potatoes are firmer and a trifle higher than last week's quotations. Spinach is also firmer and higher. Sweet potatoes are moving slowly and prices are a little lower. The range of prices on the various commodities is about as follows.

Vegetables—ASPARAGUS, Calif, doz bchs, $5.25@15. BEANS, green, Fla, hmpr, $4@8; wax, Fla, hmpr, $4@7. BEETS, new, Texas, bu, $1.75@2.25; do, Fla, bch, 4@6c; old, N J, ⅝ bskt, 50@85c; do, Penna, bbl, $2.50@3.50. CABBAGE, old, N Y, ton, $12@15; new, Fla, hmpr, $1.25@1.75. CARROTS, new, Texas, bu, $1@1.35; new, Fla, crate, $1@1.25; old, N J, ⅝ bskt, 35@75c; old, Penna, bbl, $1.75@2.50. CAULIFLOWER, Calif, crate, $2.25@3. CELERY, Fla, crate, $2.50@3.75; Penna, bch, 12@30c. CUCUMBERS, hot house, doz, $1.50@2.50. DANDELIONS, N J, hot bed, ⅝ bskt, $1.50@2. EGGPLANTS, Fla, crate, $2@3. KALE, Norfolk, bbl, $1. County News and Comment

Allegheny County, Pa.—A very sudden and severe change in the temperature. Some snow, a high wind and very cold. Farm operations are at a standstill. A little plowing has been done. Wheat prospects good, but March is yet to reckon with. Hay quite plentiful and the price of grain feeds slightly lower. Plenty of eggs being produced in our county, the Pittsburgh market being dull at about 50c per dozen retail.—C. K., Feb. 27.

Bradford County, Pa.—During the past two weeks and up until a few days ago the weather has been very mild for February. The deep snow disappeared and together with a few rainfalls made the rivers rise to the high water mark. Many sink holes appeared on the highways. On February 26 the weather changed and now is at zero and below with considerable wind. Due to the warm spell the egg production of poultry generally increased. The price dropped 20c in about two weeks. Dairy profits return rather slowly with feed costing $40@55 per ton. Milk selling to co-operative creameries for 48c per lb butterfat. Silage still holding out well. Very large percentage of hay crop still to be hauled. Farmers are cutting wood, hauling hay and lime when the roads are passable, and tending stock. Much sickness thruout the county due to the variable weather conditions.—G. E. E., Feb. 27.

Centre County, Pa.—We are having a cold snap which has given a jolt to those folks who thought they saw spring tripping over the hills from the southland. On Thursday, February 26, the thermometer dropped to zero and the cold wind rose to a sixty-mile velocity which drove the cold into houses and made it hard to keep comfortable. On Sunday, March 1, we had a snow which still covers the ground. Wheat, $1.80; rye, $1.20; corn, $1.20; barley, $1; buckwheat, $1.10; oats, 55c; butter, 40c; eggs, 40c; lard, 18c.—A., March 4.

Fulton County, Pa.—The belief in the ground hog as a weather prophet seems to be substantiated this year as we have been having ideal spring weather. Roads have dried off nicely where they have been scraped. The severely cold weather of last month did much damage to the peach orchards of the county. However, the robins have arrived now and we are all hoping for an early spring to compensate for the early winter. Farm sales are well attended and unusually good prices have been received for farm animals and machinery. Grain and grass have had six weeks continuous snow protection. Quotations: eggs, 30c; butter, 35c; wheat, $1.70; oats, 80c; corn, $2.75 per cwt.—T. H. T., Feb. 25.

Luzerne County, Pa.—Snow and rain the first day of March. North Mountains covered with snow the last couple of days in February. This county also had very low temperatures the latter part of January. It ranged between twenty-eight and thirty-four degrees below zero, at New Columbus. Many of the farmers find work around the mines and at the new electric power plant which is being built along the Susquehanna River at Hemlock Creek. Another electric power plant is to be erected along the Susquehanna River above Pittston near a place called Harding, on the Wyoming County border. Luzerne County spent $1,291,289.62 on county road work for the year 1924 according to the annual report of the County Controller. This includes new road consruction and road making and maintenance of roads under the supervision of the county authorities. County Superintendent Frank P. Hopper has completed twenty-five years of service at the head of the Luzerne County school system. He celebrated the event by taking a trip to California this winter. Prices: eggs, 40c; butter, 35c; shelled corn, $3.25 cwt.; wheat bran $2.45 cwt.; buttermilk, 40c gal, retailed in the mining towns.—M. F. T., March 1.

Snyder County, Pa.—Snow all gone, but zero weather last week of February brought winter back in full force. All stock wintered well. Pigs scarce and command good price at public sales. There are seventy-five sales advertised in this county; farmers retiring or going into other ventures. Most farmers sold their wheat at $1@1.25. Corn scarce and much sought for planting. Considerable sickness among school children. A few sugar camps have been started along streams where maples grow. The superpower plant at Shamokin Dam in this county is arousing interest, as it is said to be one of the largest enterprises of its kind in the world. It is at the mouth of the hard coal region, favorably situated along the Susquehanna River. Farmers are looking for the facility of electrical power within a short time. Wheat at local mills, $1.75; corn $1.45; oats, 50c; eggs [illegible]c.—W., Feb. 28.

Sullivan County, Pa.—The mild weather of the past month has been broken by a sudden cold snap. The uncovered winter crops will be hard hit. Since the rains, the water supply has been abundant. Census survey of the county was taken two weeks ago. There is an excessive number of sales, largely due to the farmers becoming discouraged because they could not sell their crops. Stock and machinery bring good prices, but farms sell poorly; absolutely no sale for potatoes or hay. A [illegible] reported seen. Road activities start March 15 or April 1. Fruit trees are somewhat damaged by rabbits and mice. Prices: eggs, 35c; butter, 40c; lard, 25c; potatoes, 50c; buckwheat, $1.10; oats, 80c; wheat, $1.80.—M. G., March 1.

Warren County, Pa.—Mild, balmy weather entire month of February, a change from the steady zero weather of the entire winter. The sun shone for several days and ice in streams went out without rain. Considerable damage done at Jackson Run, Kinzua and North Warren by the ice. This week and last have had considerable rain. Thunder and lightning on February 21 was followed by spring weather, showers and sunshine. Roads are almost impassable at present; mud deep and frost not yet out of roads, but entirely gone from meadows. Prices: butter, 42c lb.; eggs, 48c doz.; apples, $2 bu.; potatoes, 90c bu.—H. C. J., Feb. 24.

Tobacco Situation

BUYING has progressed steadily in all sections of the Pennsylvania tobacco producing belt during the past several weeks. With the beginning of the concerted buying movement on the part of independent packers and representatives of manufacturing firms, prices showed a slightly upward tendency. The leaf has been moving at from fourteen to seventeen and seventeen and one-half cents per pound, and growers, on the whole, seem pretty well pleased with the turn taken by the market.

The very backward season which greatly delayed the movement of the tobacco into warehouses thruout Lancaster city and county has caused a "jam" in delivery.

Crop of Good Quality

The general consensus of opinion among growers and packers seems to be that the 1924 crop is a fairly good type of cigar leaf tobacco. The burn is said to be excellent, and the texture and color are not bad. The only fault that can be found with the new crop (and this has been reflected in the price of the leaf) is that it is rather short. Most crops have a good percentage of short lengths.

A spurt in the 1923 leaf tobacco market has undoubtedly been the cause of much of the buying movement on foot in the 1924 leaf.

A committee of about 150, representing all farm organizations of the county as well as business and civic bodies, has been named by J. C. Brubaker, president of the Lancaster County Farm Bureau, to confer on the question of co-operatively marketing the Pennsylvania tobacco crop. This committee will meet in the near future with Frank M. Evans, of the American Farm Bureau Federation.—Garden Spot Farmer, March 5.

Now! You Can Preserve and Beautify Your Home on the Easy Payment Plan

It Covers

It is unnecessary to further delay that much-needed painting job.

Get in touch with the *Lucas* dealer and arrange through dealer and the painter for protection against further property loss, on convenient time payments. To provide a dependable and economical protection against weather, select *LUCAS* TINTED GLOSS PAINT, because:

IT COVERS more square feet per gallon and more thoroughly hides the surface, due to finer grinding of materials, a higher percentage of pure linseed oil, and *LUCAS* superior methods of combining all ingredients into one perfectly finished product.

IT BEAUTIFIES and its beauty lasts because of its high gloss and clear, perfect shades, made with pure tinting colors of *Lucas'* own manufacture, possessing maximum permanency.

IT LASTS longer because it is made of highest grade materials, carefully selected, scientifically combined by skilled workers of long experience.

IT PROTECTS positively because its smooth, glossy surface is resistant to weather. Its elasticity prevents checking or cracking during temperature changes, consequently preventing moisture, the cause of decay, from getting to the underlying surface.

IT IS ECONOMICAL
Its GREATER COVERING CAPACITY reduces the cost of application.
Its GREATER LASTING QUALITY decreases the cost per year of protection.
Its GREATER PROTECTION saves costly repairs.
Its GREATER BEAUTY increases the value of your property, reflects prosperity and radiates happiness.

You can preserve your property on convenient time payments. Ask the *Lucas* dealer in your community or write us for name of nearest dealer.

PROVED SWEDISH TREATMENT STOPS ABORTION

Famous foreign treatment quickly relieves badly infested herds. Gives amazing results in cases owners believed hopeless. Formula available for every farmer.

Complete freedom from the ravages of the terrible abortion plague is now assured every worried farmer through a famous Swedish treatment. For many years it has been used with complete success in the old country, banishing this disease from whole dairy sections literally rotten with abortion.

After great expense of time and money the formula was reproduced and given to farmers in this country. History repeated itself. Herd after herd was rid of this disease. Even cows considered hopeless were restored to health and produced fine, sturdy calves.

Saved Every Calf

Frank H. Halfman, Crown Point, Ind., is one of hundreds of grateful users, he says: "Two years ago for a period of three months I lost every calf in my herd of forty cows. All abortion remedies failed. I was desperate. I heard of your C. C. C. treatment, used it and have never lost a calf since. It completely stopped my abortion troubles."

For nine years the fame of this easily given treatment has spread from breeder to breeder. Today it is distributed on an absolute binding guarantee that it will stop every case of abortion: that every cow treated will deliver a normal calf or the treatment cost is refunded. Such a broad guarantee is possible only because C. C. C. is practically 100% successful.

Send No Money

Mr. John W. Froberg, who is a native of Sweden and is responsible for introducing this treatment in the U. S. A. will gladly send every farmer troubled with abortion full information about it. Don't send any money—just your name and address to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind. Full details will be mailed you without any obligation. Read the wonderful true story of C. C. C. You will be surprised how easy it is to treat your herd, how little it costs, how quickly you get results.

QUALITY CHICKS—EGGS

The Light in the Clearing

(Continued from page 23)

hind the old money-lender thru the streets of the village when her pointing finger had seemed to say to me: "There, there is the man who has brought me to this. He has put these rags upon my back, this fire in my heart, this wild look in my eyes. Wait and you shall see what I will put upon him."

I knew that old Kate was not the irresponsible, witless creature that people thought her to be. I had begun to think of her with a kind of awe as one gifted above all others. One by one the things she had said of the future seemed to be coming true.

When we had pulled the cart into the stable I tried to shift one of the bags of grain and observed that my hands trembled and that it seemed very heavy.

As we were going into the house the schoolmaster said:

"Now, Mary, you take this lantern and go across the street to the house o' Deacon Binks, the constable. You'll find him asleep by the kitchen stove. Arrest his slumbers, but not rudely, and, when he has come to, tell him that I have news o' the devil."

"This shows the power o' knowledge, Bart," he said to me when we entered the house.

I wondered what he meant and he went on:

"You have knowledge of the shooting that no other man has. You could sell it for any money ye would ask. Only ye can't sell it, now, because it's about an evil thing. But suppose ye knew more than any other man about the law o' contracts, or the science o' bridge building, or the history o' nations or the habits o' bugs or whatever. Then ye become the principal witness in a different kind o' case. Then it's proper to sell yer knowledge for the good o' the world and they'll be as eager to get it as they are what ye know about the shooting. And nobody'll want to kill ye. Every man o' them'll want to keep ye alive. But mind, ye must be the principal witness."

Deacon Binks arrived, a fat man with a big round body and a very wise and serious countenance between side whiskers bending from his temple to his neck and suggesting parentheses of hair, as if his head and its accessories were in the nature of a side issue. He and the schoolmaster went out-of-doors and must have talked together while I was eating a bowl of bread and milk which Mrs. Hacket had brought to me.

When I went to bed, by and by, I heard somebody snoring on the little porch under my window. The first sound that reached my ear at the break of dawn was the snoring of the same sleeper. I dressed and went below and found the constable in his coon-skin overcoat asleep on the porch with a long-barreled gun at his side. While I stood there the schoolmaster came around the corner of the house from the garden. He smiled as he saw the deacon.

"Talk about the placid rest of Egyptian gods!" he exclaimed. "Look at the watchful eye o' Justice. How well she sleeps in this peaceful valley! Sometimes ye can hardly wake her up at all, at all."

He put his hand on the deacon's shoulder and gave him a little shake.

"Awake, ye limb o' the law," he demanded. "Prayer is better than sleep."

The deacon arose and stretched himself and cleared his throat and assumed an air of alertness and said it was a fine morning, which it was not, the sky being overcast and the air dank and chilly. He removed his greatcoat and threw it on the stoop saying:

"Deacon, you lay there. From now on I'm constable and ready for any act that may be necessary to maintain the law. I can be as severe as Napoleon Bonaparte and as cunning as Satan, if I have to be."

I remember that thru the morning's work the sleepy deacon and the alert constable contended over the possession of his stout frame.

The constable shouldered the gun and followed me into the pasture where I went to get the cow. I saw now that his intention was to guard me from further attacks. While I was milking, the deacon sat on a bucket in the doorway of the stable and snored until I had finished. He awoke when I loosed the cow and the constable went back to the pasture with me, yawning with his hand over his mouth much of the way. The deacon leaned his elbow on the top of the pen and snored again, lightly, while I mixed the feed for the pigs.

Mr. Hacket met us at the kitchen door, where Deacon Binks said to him:

"If you'll look after the boy today, I'll go home and get a little rest."

"God bless yer soul, ye had a busy night," said the schoolmaster with a smile.

He added as he went into the house:

"I never knew a man to rest with more energy and persistence. It was a perfect flood o' rest. It kept me awake until long after midnight."

(To be continued)

VOTED FOR RUSSETS

Rusty Potato Preferred When Baked, Boiled or Chipped

RUSSET potatoes were awarded first place on all around cooking qualities in a potato cooking demonstration held by Centre County potato growers and consumers in the Spring Mills Vocational School, according to County Agent R. C. Blaney.

Home economics extension and vocational school workers baked, boiled, mashed, and chipped five varieties of Centre County grown potatoes; Russet, Sir Walter Raleigh, Blue Victor, Spencer, and Early Rose. The varieties prepared in the different ways were numbered by the school superintendent, who was the only person who knew which variety each dish contained.

Ten judges, consisting of four women and six men, were selected by the audience. Each judge was given a score card and asked to taste and score each of the various dishes on its quality. The result was a unanimous vote in favor of the Russets on all-around cooking qualities.

Win on Every Count

In addition to superior cooking quality, Russets boiled in the shortest time, taking thirty minutes when the other varieties required up to thirty-four minutes. They also baked in the quckest time, taking fifty-four minutes when the other varieties required up to sixty-eight minutes.

E. L. Nixon, extension plant disease specialist of the Pennsylvania State College, in discussing the demonstration said that the results checked very closely with the culinary tests at State College which brought out forcibly the fact that Russets on a heavy limestone soil are the outstanding cooking potato.—A. L. B.

Bride (to butcher)—What sort of roast do you think would go well with a perfectly darling blue-and-white dinner set?—Life.

Pulled 74 Stumps In One Day

Without Help or Horses

CENTAUR Small Farm TRACTOR

Makes Farm Work Quicker, Easier and More Profitable

HERE is a low-cost, dependable little tractor that takes the drudgery out of farming and enables you to do twice as much work in a day's time. The CENTAUR is a different tractor — more flexible than any other — better fitted for all 'round use on the smaller farms — less expensive to buy and operate—and above all, trouble-proof. This sturdy tractor will cut your planting and cultivating costs to the minimum and give you an inexpensive power unit for dozens of other jobs.

Plows 7 Inches—Backs on Own Power

The CENTAUR is a riding tractor on all jobs. Does plowing, harrowing, discing, seeding, cultivating, hauling, feed grinding and all other belt and draw bar work. It is equipped with finest air-cooled motor built; has Hyatt Roller Bearings, Bosch Magneto and Automatic governor; perfect lubrication. Low cost. Fully guaranteed. Get the facts about this money-making, work-saving tractor at once. Write today.

HOLGATE CHICK HATCHERY, Box L. Holgate, Ohio

Embargo Does Not Prevent Shipment of Day-Old Chicks

SHIPPERS and buyers of day-old chicks will be glad to know that embargoes on poultry placed because of the poultry influenza do not apply to shipment of day-old chicks when placed in new or disinfected containers. Parcel post shipments are in no way affected by state embargoes. There is no reason to believe that the disease can be spread thru shipment of day-old chicks.

HILLPOT Quality

STURDY PURE BRED HIGH-EGG-YIELD CHICKS

Their Sturdy Vigor

makes them ideal for early broilers. It enables that snappy activity that is quick growth's closest ally.

That's another advantage of Hillpot hatching—where eggs from profit strains, during the whole period of incubation, are under the constant, experienced scrutiny of experts. Result: The chicks uniformly have that quality PLUS which features Hillpot Quality Chicks.

JUNIATA POULTRY FARM, RICHFIELD, PA

Riverside Oversize Cord Tires and Tubes

Read what the users say

Does a Riverside Cord last as long as *any* tire? Is it as good a tire as any tire made? Is it as well made as a tire can be made? Tens of thousands of users of Riverside tires answer enthusiastically—"Yes!"

Just forget that our prices are low. Compare quality, service, mileage—tire for tire, and Riverside Cords stand equal to the best. There is a big saving in price—and the quality, mileage, service is all that you get in any tire.

How our low prices are made

Riverside tires cost as much as other tires *to make*. You pay as much for fabric, rubber and labor. But you pay less profit. That is why Riverside prices are so much less. We are the largest retailers of tires in the world. We sell 5,000 to 6,000 tires per day. Riverside Tires are made in the best factories—on our specifications, under our supervision. We know their quality.

Greater Protection against Skidding

Big heavy blocks of *live* rubber and extra thick side studs and the husky ribs of Riverside Cords grab the slippery roads and are your greatest protection against skidding.

Riverside Cords are thus the safest tire, the most satisfactory tire and the most economical tire you can possibly buy. Why pay more?

For 53-years Ward's have sold "Quality" goods only—with a definite "Money Back" guarantee. The reliability of Montgomery Ward & Co. is beyond question. You can not buy a tire with a better guarantee.

"A pair of Riverside Cords have already given me one year's service on rough mountain roads, and they have never been off my car. You can't beat Riversides for good road service."
James A. Kipe,
Cascade, Maryland

"The Riverside Cords I bought last Summer show very little wear. High-priced tires put on my car at the same time are all gone. I tell my friends to use Riversides and get their money's worth."
Chas. F. Poor,
Danvers, Mass.

"A Riverside Cord on my Buick, with your heavy duty tube, has run 15 months, in use every day, and it still has in it the same air put in 15 months ago. 'That's going some'."
D. S. Robbins,
Las Cruces, N. Mex.

DAIRYMEN IN SCHOOL

Delaware Farmers, Tho New at the Game, Ship "A" Milk

A TWO-DAY dairy school for farmers of the Nassau community in Sussex County, Delaware, was recently held under the co-operative direction of the Extension Department of the University of Delaware and the Philadelphia Inter-state Dairy Council. There was an average attendance of 250 farmers and their wives.

Discussions on the selection, breeding and feeding of dairy cattle, and the care and value of dairy products were led by representatives of the University of Delaware, and the Dairy Council. One of the features was a dairy cattle judging demonstration and contest, in which 160 farmers took part.

Started Dairying One Year Ago

The success of this school is all the more interesting because of the fact that until a year ago no market milk was produced in this community. As the result of a farm management survey conducted by the Extension Department of the University of Delaware, it was found that dairying could be made a valuable source of income in the community. Thru the co-operation of the Inter-state Milk Producers' Association and the Dairy Council, a cooling station was erected at Nassau, and since last April over seventy producers have been shipping Grade A milk to a Philadelphia distributor. These producers have been able to keep their average bacteria count below 10,000, and boast of having the only Grade A station in Delaware.

As a result of the dairy school the dairymen of Nassau community are planning to organize bull rings, using several high test sires to improve the quality of their herds in the future. They will also start testing work in their herds on a modified cow testing association plan, and in co-operation with one of the local banks will organize a calf club among the boys and girls.—C.

A New State Champion

ONLY three other junior three-year-old Holstein cows in the United States have exceeded the yearly butter production record made recently by Pennsylvania's new champion of this class. This new dairy queen is Wynola Tobe Pontiac Lass, owned by A. S. Deysher, of Reading. Under the supervision of the Pennsylvania State College, this cow completed her 365-day test period with 23,498.2 pounds milk and 949.43 pounds butterfat (1186.7 pounds butter), according to the advanced registry department of the Holstein-Friesian Association of America.

A home-mixed grain ration including oil meal, cocoanut meal, molasses and beet pulp is fed to all cows in milk in the Deysher herd and all receive the same care. In addition to the grain mixture, the new state leader consumed large quantities of corn silage and alfalfa hay daily. She is the daughter of the present herd sire on this farm, King Tweed Spring Farm, who has two other daughters, each having recently produced thirty-one pounds of butter in seven days as senior two-year-olds.

It's good to have money and the things that money can buy, but it's good to check up once in a while and make sure you haven't lost the things that money can't buy.

If you can keep your head in turmoil, the turmoil generally ceases. The best blacksmith I ever knew, always smoked his pipe until a mule got thru kicking.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

PARTIAL LOSS OF POWER.—One of my neighbors has a horse that has been ailing for the past six months. The flesh seems to have left both hind quarters, when down is unable to get up without considerable help. Now the owner keeps her standing. She is only six years old. He dislikes to destroy her. She has a good appetite; when in harness she travels fairly well but remains about the same. Will she recover?—W. T. F., Monroe County, Pa. Give her one dram of acetate of potash, also one dram of fluid extract of nux vomica at a dose in drinking water two or three times a day. Feed her plenty of roots and wheat bran, exercise her some every day. Hand-rub hind quarters twice daily. Her recovery is doubtful.

FEEDING ORPHAN PIGS.—I have a sow that has large litters of pigs. This last litter was nineteen, and as she can only raise twelve of them, I should like to know how to start them.—J. L., Broome County, N. Y. The sow's milk is very rich, therefore you should feed them milk from your best cow, also be particular about keeping the feeding utensils clean.

CHRONIC NASAL CATARRH.—We have two good cats, but both have catarrh, one of them has been ailing for two years. They are fat and both good hunters.—S. C., York County, Pa. Dissolve a teaspoonful of bicarbonate of soda in one-half pint of tepid water, then dip nose into this solution once or twice a day.

WARTS ON EYELIDS.—Have two calves troubled with warts on eyelids.—R. A., Lebanon County, Pa. Warts may be removed with scissors, twisted off with the fingers, or ligatured. Acids should never be used in removing warts about the eyes or mouth. Papillomas of the eyelids sometimes change to cancers and should be removed by taking out a wedge-shaped section of the eyelid. It is good practice to give Fowler's solution of arsenic twice a day. The dose is from one to eight drams, depending upon the weight and age of the animal.

CONTAGIOUS FORM OF MAMMITIS.—Have now several cows that have a black scab on end of teat, some very small, some quite large; it can be pulled off and in some cases a sort of core comes away, much like a boil, some of the scabs can't be pulled off. Iodine does not seem to be effective, as a neighbor has three good cows who lost their milk from that condition. Will you please give me a remedy?—D. H. R., Mercer County, N. J. You may have some success in checking the progress of this disease, by applying pure carbolic acid to sore only; flush teat with a saturated boric-acid solution at tepid heat. Dissolve one grain of corrosive sublimate in a pint of water and flush teat, also apply same to teats of other cows; but wash it off before milking. It is good practice to inject some hydrogen peroxide into teat, slowly. This will help to keep teat canal open. Prevention is to be especially sought in all such cases, the milker must be careful and not spread this disease.

The Peacemaker: A telephone pole never strikes an automobile except in self-defense.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

RHUBARB—Mammoth Victoria, 1-yr. whole roots 20-$1.; Giant Crimson 3-yr. divisions 8-$1.; Asparagus Roots 50-$1.; Delivered prepaid anywhere. Weaver Gardens, Wichita, Kans.

ASPARAGUS—Why not plant the largest, tenderest, most profitable, "The Washington". 100 roots $1.25; 1000 $8.00. Postpaid. Glick's Seed Farms, Lancaster, Pa.

NEW RED RASPBERRY FREE—Tip Grower, very hardy, literature free. Small fruit plants. Dept. L., Hellenga's Nursery, Three Oaks, Mich.

SWEET CLOVER SEED both white and yellow. Inoculating Bacteria for bushel any legume 60c postpaid. E. E. Basil, Latty, Ohio.

GLADIOLI BULBS that will please you. 25 of them postpaid for sixty cents. Floral Farm, Pleasantville, N. J.

BUY NURSERY STOCK direct from grower. Save agent's commission. Send for catalog. Kankakee Nursery, Kankakee, Illinois.

DAHLIAS

BRIGHTEN YOUR GARDEN—A limited number of tubers of a very fine strain of the premier of all dahlias—Mrs. I. de Ver Warner. One of the most wonderful of dahlias, a beautiful bright lilac rose. A very strong grower—with giant flowers that can be grown under ordinary good cultivation, 7" or 8" in diameter and 4" or 5" deep, with very long stiff stems. When first put on the market sold for $25.00 a tuber, now $1.00. Green plants 65c. Green plants if cared for when planted to see they do not dry are better in every way. Better flowers and grow as good tubers. John I. Gurney, Boston's Dahlia Specialist, 22 Highland St., Dor. Station, Boston, Mass.

SPECIAL Introductory Offer. 5 Cactus Dahlias unlabelled. 10 Gladioli bulbs mixed, all for $1.00. Postage 15c additional. Royal Sales Co., Frenchtown, N. J.

CABBAGE PLANTS

FROSTPROOF CABBAGE PLANTS—All leading varieties. Bermuda Onion, Earliana and Baltimore Tomato plants. 500, 75c; 1,000, $1.25; 5,000, $5.00. Porto Rico Potato plants: 500, $1.50; 1,000, $2.50. By mail or express. Charges collect. Cabbage and onion now ready, others April 1st. All well rooted, open field grown from best seeds. We guarantee satisfaction, prompt shipment, safe arrival. Descriptive list free. Reinhardt Plant Co., Ashburn, Georgia.

FROSTPROOF CABBAGE PLANTS—Field hardened, can be set six weeks before home grown plants, and will head four weeks earlier. Early Jersey and Charleston Wakefield, Copenhagen Market, Succession, Flat Dutch. Prices: 100, 30c; 500, $1.10; 1000, $2.00, postpaid. Express collect: 1000, $1.25; 5000, $5.00. Other plants in season. Write for catalog. Piedmont Plant Company, Albany, Ga.

FROST PROOF Cabbage and Tomato Plants. Varieties: Early Jersey and Charleston Wakefield, Copenhagen Market, Flat Dutch and Succession. Tomato: Greater Baltimore, Earliana and Livingston Globe. Prices, parcel post paid, 500-$1.50; 1,000-$2.50. Express collect $1.25 1,000. We ship the size of plant you wish. Satisfaction guaranteed. Tifton Potato Company, Inc., Tifton, Ga.

CABBAGE PLANTS 40c per 100, or $2.98 per 1000. Postpaid. Dahlia Roots, assorted, $1.25 per doz. Postpaid. David Rodway, Hartly, Del.

SEED CORN

CHOICE SEED CORN—Lancaster Sure Crop $1 bu. Many tests have proven the heaviest yielder, especially on thin soil. Swedish Select oats averaged 60 bu. on 18 acres, $1.25 bu. Brook Side Stock Farm, Hershey, Pa.

SEED CORN—Lancaster County Sure Crop $3.25 per bu. shelled and graded. Shipped F. O. B. Cash with order. Jason M. Eby, Gordonville, R. 2, Lancaster County, Pa.

SEED CORN—Lancaster County Sure Crop. Carefully inspected and graded. $3.50 bushel. Hugh Brinton, West Chester, Pa.

POTATOES

PEDIGREED POTATOES Certified Rural Russets and Irish Cobblers. Yields of 300 to 562 bu. per acre. Highest yielding strain at Livonia, N. Y. State seed test, 440 bu. per acre. First and sweepstakes Cornell Potato Show for past 3 years. Gardner Farms, Box 186, Tully, N. Y.

RURAL RUSSET—Disease free seed potatoes. No. 1 grade $2 per 100 lbs. Cash with order. Satisfaction guaranteed. H. E. Lewis, R. D. 1, Towanda, Pa.

CERTIFIED Seed Potatoes, direct from growers to users. Write for prices. Delivered your station. State Seed Potato Association, Syracuse, N. Y.

SEED POTATOES—Certified Russet Rurals, very vigorous, high yields. Paul R. Smith, Ulysses, Pa.

POTATOES Carman, Cobbler, Mountain, Ohio, Russet, others. Ford Fishers, N. Y.

LIGHTING THE PATH TO ECONOMY
Catalogue Number 102
Spring & Summer 1925
THE OLDEST MAIL ORDER HOUSE IS TODAY THE MOST PROGRESSIVE
MONTGOMERY WARD & CO.

Is a Saving of $50.00 Interesting to you?

ARE you *using* this Catalogue? Do you and your family use every opportunity for saving money that this book has brought into your home?

Try This Plan for Saving

Every time you need to buy anything for your own personal use, for the family or the home, look it up in Ward's Catalogue. Take advantage of the saving.

Then keep a list of everything you buy and the amount you saved. Thousands of our customers do this, and frequently they write us, "My savings in buying at Ward's amount to at least $50.00 cash each season."

How Ward's Low Prices Are Made for You

Sixty million dollars' worth of goods have been bought for this book—bought for cash to get the lowest prices. Bought in large quantities to get the lowest prices. Frequently we buy 100,000 pairs of shoes in one order to get a lower price. Sometimes we even contract for the entire output of a factory to get the lowest price.

And at Ward's the savings made by our big buying, the savings made through our buying for cash, these savings are yours—always yours.

Always Compare Quality as Well as Price

In gathering our vast assortments of merchandise, our buyers search the markets of the world for low prices. But only for low prices on goods of standard quality. We never buy goods to offer you unless they are the kind of goods that will stand inspection and use—the kind that will hold your good will.

At Ward's "we never sacrifice quality to make a low price." We offer no "price baits." We do not sell cheap unsatisfactory goods at any price. Your satisfaction with everything you buy is our first consideration.

Use Your Catalogue—Save Money Every Month

You have a copy of this Catalogue. Use it for everything you need to buy. Ordering each month from Ward's means a monthly saving. $50.00 in cash will soon be saved if you use your Catalogue for everything you buy.

Everything for the Home, The Family and the Farm

Every Woman, young and old, will find this catalogue of great interest if she uses it. Have you studied carefully the big department of shoes for every member of the family? Have you studied its New York Fashions? Do you realize that this book offers nearly everything you buy to use or wear and that always there is a big saving?

The Man and Boy will find this book of great value. Whether you are interested in tires or accessories for the automobile, or in radio, in stylish, serviceable clothes or work clothes, or hardware, or tools, always Ward's Catalogue offers you a saving.

The Home has many needs. It needs most of all to be made comfortable and beautiful. Ward's catalogue is a real Home-maker. It offers everything new and beautiful and pleasing, the newest in curtains and rugs and furniture, everything that goes to make a house a home—that makes it more delightful and more convenient.

Your Orders Are Shi
Within 24 Hours

Your order will be
within 24 hours. We appre
your orders at Ward's and
give your orders immediate
tention.

But more than this one of
six big houses is near you.
consider how much less tim
takes for your letter to reach
—how much less time for
goods to get to you and
much less the cost of transpo
tion. It is quicker and che
to order from Ward's.

Deciding how many acres of potatoes you will plant this year and planning new ways to cut the cost of the crop. Page three.

Select the Right Analysis for Your Crop

Through years of research and actual field experiments, the state agricultural colleges and experiment stations have determined the analyses of fertilizers which will give you the best results on each crop and soil.

For Pennsylvania, the Pennsylvania Agricultural Experiment Station recommends the following analyses:

Corn—No manure or clover sod, poor soil, 2-12-4, 3-10-6; medium soil, 0-12-6; rich soil, 0-16-0; with manure or clover sod, poor soil 2-12-4, 0-16-0; medium or rich soils, 0-16-0.

Wheat, rye and oats—No manure or clover sod, poor soil, 2-12-4; medium soil, 2-12-4, 0-16-0; rich soil, 0-16-0; with manure or clover sod, all soils, 0-16-0.

Alfalfa when seeded—No manure or clover sod, medium soil, 2-12-4; rich soil, 0-16-0; with manure or clover sod, poor soil, 2-12-4, 0-16-0; medium or rich soils, 0-16-0.

Alfalfa, top dressing—No manure or clover sod, medium soil, 0-12-6, rich soil, 0-12-6, 0-16-0; with manure or clover sod, poor or medium soils, 0-12-6, 0-16-0; rich soil, 0-16-0.

Timothy—No manure or clover sod, poor soil, 7-6-5, 6-8-4; medium soil, 7-6-5, 10-5-0; with manure or clover sod, poor soil, 0-16-0.

Potatoes—No manure or clover sod, poor soil, 3-10-6; medium soil, 2-12-4, 3-10-6; rich soil, 2-12-4; with manure or clover sod, poor soil, 3-10-6, 2-12-4; medium soil, 2-12-4; rich soil, 0-16-0.

Vegetables, (Leaf crops.)—No manure or clover sod, medium or rich soils, 6-8-4, 4-8-4. With manure or clover sod, medium soil, 4-12-4, 4-12-0; rich soil, 4-12-4, 4-12-0, 0-16-0.

Tomatoes, peppers, cucumbers, melons, egg plants—No manure or clover sod, all soils, 6-8-4, 4-8-4; with manure or clover sod, poor or medium soils, 4-12-4; rich soil, 4-12-4, 4-12-0, 0-16-0.

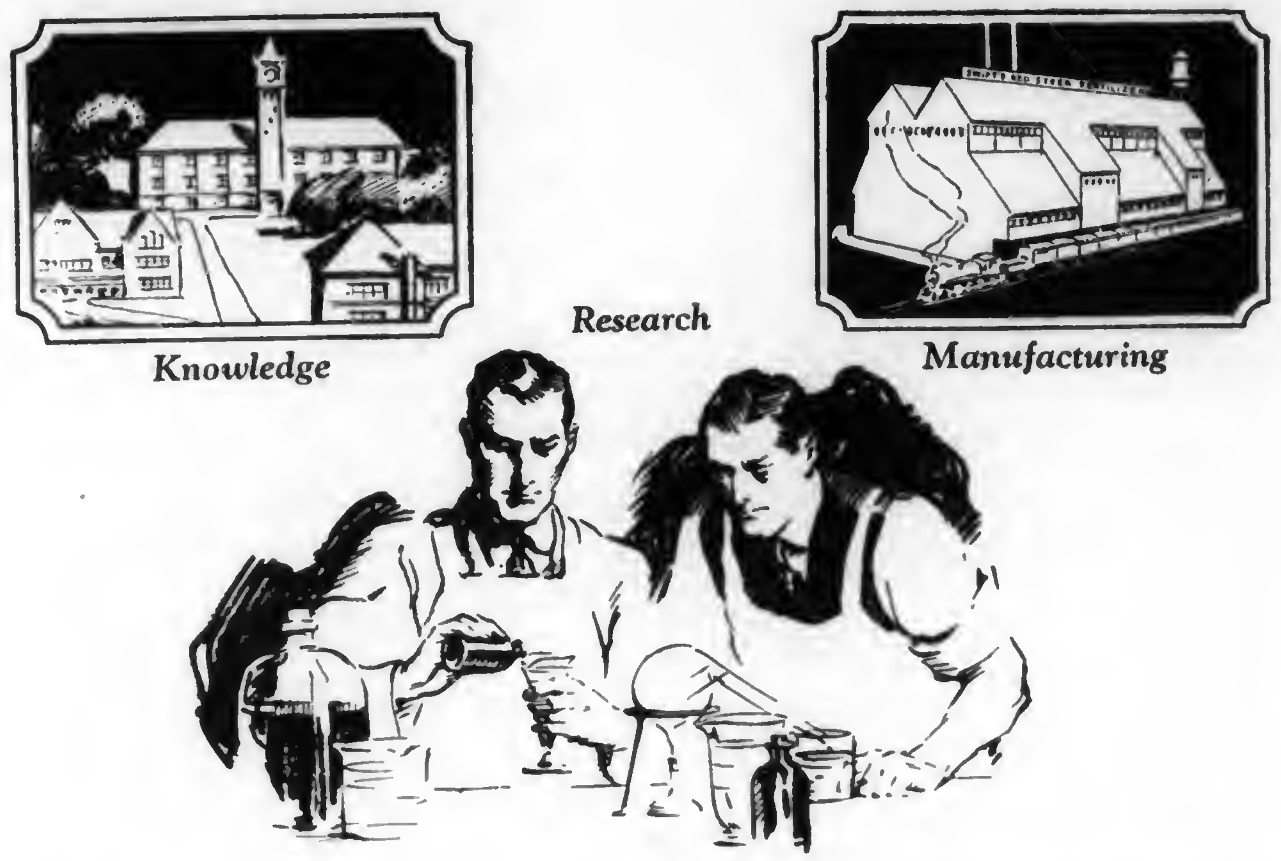
Vegetables, (Root crops.)—No manure or clover sod, poor soil, 5-10-5, 4-8-6. Medium soil, 4-8-6, 4-12-4; rich soil, 4-12-4. With manure or clover sod, poor soil, 5-10-5, 4-12-4; medium soil, 4-12-4, 2-12-4; rich soil, 3-8-3, 0-16-0.

Tobacco—With or without clover sod, medium and rich soils, 5-8-5, 4-8-4.

As an Authorized Swift Agent for the sale of Swift's Red Steer Fertilizers, we are co-operating with the Pennsylvania Agricultural Experiment Station in recommending and selling these analyses.

Come in and we will help you select the analysis and decide on the amount per acre to make you the most profit.

asa
Authorized Swift Agent



Back of the fertilizer you buy

Profits from your crops depend largely on the fertilizer. It is of utmost importance, therefore, to consider carefully who makes the fertilizer you use.

The manufacture of Swift's Red Steer Fertilizers is based upon years of research, upon Experiment Station results, and upon the experience of thousands of farmers. Only the most productive sources of plantfood are used. A large staff of chemists and agriculturists is maintained to safeguard and improve their quality.

Each Swift factory is equipped with the most modern manufacturing and laboratory facilities and operated by experts of long experience. This assures the farmer a fertilizer in the best mechanical condition, thoroughly mixed and properly cured—a fertilizer that will furnish the right kind and amount of plantfood to each plant at the proper time.

Buy a fertilizer of known value

Swift's Red Steer Fertilizers are manufactured to a definite standard of quality. This standard is zealously maintained and is in keeping with the fifty-year reputation of Swift & Company for making every product the best of its kind.

There are differences in fertilizer. Guaranteed analysis means only the amount of plantfood—it does not guarantee the kind or quality. Insist on the brand with the Red Steer on the bag and you can be sure you are getting a fertilizer containing only the highest quality of plantfood.

Swift service to the farmer

In your community there is an A. S. A. (Authorized Swift Agent). He is pledged to furnish Swift Service—a service which will mean money to you. In co-operation with Swift & Company, your County Agent, and the State Agricultural College it is his job to keep posted on the best farming methods and to pass this information along to you. He will be glad to discuss your farming problems.

Let him explain to you more fully the profit you can make through a liberal use of Swift's Red Steer Fertilizer on all of your crops. Should you fail to locate him readily, write us.

How Many Acres of Potatoes in 1925?

As Competition Becomes Keener More Intensive Methods Must Be Adopted

By Daniel Dean, Tioga County, N. Y.

EACH American potato grower must soon decide how many acres he will plant this year, and what is just as important, how much fertilizer, improved seed, spraying or better care he will or will not give each acre.

Potato growers are not now and probably never can be organized as a labor union. Because brick-layers hold together to get a better price for their labor my brother-in-law got all last season either $1.50 or $1.75 per hour. Ten years ago he worked far harder and got sixty cents. Now the potato grower must pay several bushels of potatoes to get the number of bricks laid that he could get then for one bushel. In the meantime, each of us potato growers must lay his plans to fit the facts we must face in 1925, whether we like them or not.

From 1920 to 1925 prices of farm products have been little above the average of five years' prices before the war, while practically everything we buy has been far higher than before. When the war began farm prices were even then so far below city prices that farmers were emigrating to cities by hundreds of thousands each year.

Prices Depend on Weather

A single crop like corn this year may be high in price, but the same cool season that damaged growth of corn gave us ruinous prices for a big potato yield. We must plan for 1925 with the expectation that prices of farm products will rise some, but not much, over last year's prices. Any crop may be higher from a poor yield, or may be lower from a bumper crop.

What are the facts potato growers must face in 1925? The old plan of general farming which lasted from the time of Plymouth Rock and Jamestown nearly to the present worked fine under the conditions of those days. Each farm produced nearly everything it needed, because without railroads it could buy but little, and as there were few opportunities to sell a surplus, there was no incentive.

Now potato growing, like the rest of American farming is fast becoming a vast manufacturing business, in which each section specializes more and more in the production of those crops or products to which its soil and climate are best adapted. Two years ago this spring, over 600 cars of potatoes came from Idaho to New York and Philadelphia in April to fill the shortage in the eastern crop. This spring it is the West that is short of potatoes, and already the Pacific Coast is buying many cars from as far east as Minnesota, half way across the continent.

Just as Henry Ford manufactures cars, or George F. Johnson makes shoes, we farmers are producers of potatoes, corn or wheat. Henry Ford is the richest man in the world today because he can make an automobile cheaper than any one else, and Johnson's shoe factory makes 14 [illegible] pairs a day because he has learned how to cut production costs.

In the past, each farm grew a few acres of potatoes, largely by hand labor, and at a cost of labor for each bushel which has driven New York and Pennsylvania potato growers by the thousands into Johnson's factories to help produce shoes. Henry Ford's factories contain thousands of men who have left Michigan potato farms.

For the last thirty years potato growing has become more and more specialized in those sections where soil and climate help the grower produce at low cost per bushel. Our largest early crop production is around Chesapeake Bay. Long Island specializes on high quality stock to sell at high prices. Maine and the great potato belt reaching from Michigan to the Dakotas grow a larger proportion of our main crop every year.

Becoming a Specialized Business

Why? Because in these sections the growers have adopted those manufacturing ideas used by such men as Ford and Johnson. Just as shoes are made in a big factory instead of the cobbler's little shop, the grower of Minnesota or North Dakota is often raising potatoes on a whole quarter-section, 160 acres, and some on as many as 640 acres. A Long Island grower thinks nothing of planting seventy-five acres out of a 100-acre farm in potatoes,—land worth $500 per acre.

The change in potato growing is the same that occurred in dairying when the old family dairy of three to six cows was replaced by the present dairies of fifteen to thirty, and even more.

Machinery Cuts Cost per Bushel

The small potato field is too expensive in labor to compete with the big field. The little field cannot profitably use teams of more than two or three horses, and cannot pay for the tractor at all. The big field can be worked by teams of four or five heavy horses for each driver, at less cost per acre, or a tractor can be used.

With a 10-20 horsepower tractor one man can plow three-quarters of an acre an hour, or disc two acres. With two spring-tooth harrows together three acres can be covered. Land that is too stony for the potato digger is steadily going out of use for potato growing. The labor-saving machine pays fast for itself in the large field, but more sprayers, diggers and planters are discarded because out of date than are ever worn out.

Just as Henry Ford once took two weeks to study out one point where he could save fifteen cents in the cost of every car, let us as growers study over our production costs per bushel and see where we can cut them.

When we compare the prices received by American farmers for all food products last year with those of the five-year period from 1910 to 1914 we find last year's were from eighteen to forty-one per cent higher in different months. This, of course, includes the high price of wheat caused by a world shortage when we were fortunate in having a good crop. But the general price level of all commodities was sixty-five per cent above pre-war in January. As this included the low priced farm products, city products were higher still, and it is these city products which farmers must buy for their families.

The largest single item in the cost of potatoes is labor. Either the farmer must hire at high wages, or he must give up his own chance to get high wages, perhaps on road construction thru his farm.

Manufacturers in Trouble, Too

Most of our labor saving farm machines are still eighty to 100 per cent above pre-war prices, due to high labor costs. Many of the manufacturers are now bankrupt. When I buy a new machine at such prices I want to have enough business to make it pay for itself quickly in its saving of labor.

Horses are very low in price, only sixty-five per cent of pre-war prices in New York. Hay is very cheap, oats fairly so, but the labor to care for horses is dear. This is the year to sell the old team and buy young horses, as horses are going higher before many years.

Tractors are high in price, kerosene not so high. Tractors pay best on large fields. They have a very high emergency value when a late spring or a rainy period has put work back.

Farm land is cheap, thirty-five per cent above pre-war prices in New York. It often pays well to let land grow organic matter one year.

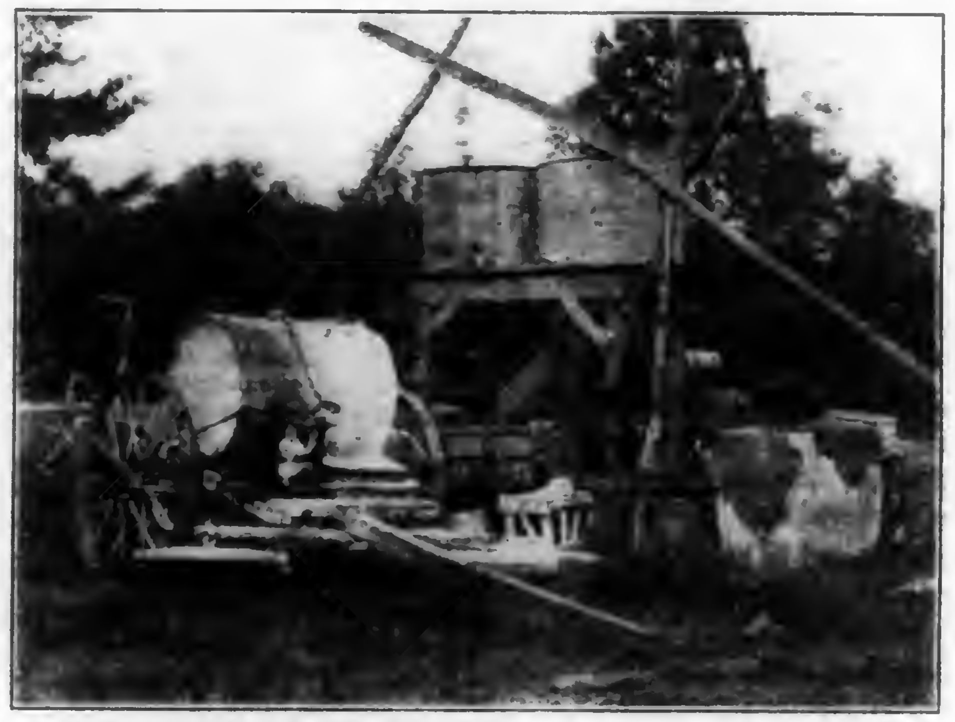
Seed potatoes are very cheap this year. This spring car lots of high producing certified seed can be bought for a fraction above the price of table stock before the war.

Corrosive sublimate for seed disinfection is cheap, and with a tank, treating potatoes in crates takes but little labor. It is a good insurance against loss of stand as well as against scab.

Copper sulphate for spraying costs but little more than five cents per pound, the lowest for a long time. The spray machinery and labor are high, rotten potatoes cost still more.

Marketing potatoes in car lots pays far better than marketing in small lots. For twenty years I have made big money on the margin I get over the wagon load price. No dealer can pay much more for the best load of potatoes in a car lot than he can for the poorest, for it is the poorest which sets the price of the whole car. Good seed, seed disinfection, thoro spraying and good machinery for digging and grading help to get ten to twenty cents more for the car of clean, uniform stock.

An Outfit That Simplifies Potato Spraying



This photograph, taken last summer, shows the potato spraying outfit of P. R. Smith, of Potter County, Pa. Mr. Smith is able to cover ten acres in a half day with this 150 gallon sprayer. A four horsepower engine forces the water from a 211-foot well into the tanks on the platform. The potato vines are covered with Bordeaux mixture at least [illegible] times a year.

That last apple *and* Ford Lubrication *have much in common*

PUTTING cheap oil into your Ford engine is like risking a tumble by reaching for that last apple on a dangerously high branch. Even if your engine *does* keep out of the repair shop, the amount you are trying to save is only a pittance. At the most, it can hardly be $5.00 a year, *even if poor oils gave as good mileage.*

But cheap oils *don't* give cheap *mileage.* Low price per quart never indicates low cost per mile.

Mobiloil "E" has won its popularity on low-cost-per-mile. In addition to lower oil bills, the almost universal experience includes such benefits as—

More repair-free miles
Decrease of carbon and fouled spark plugs
Smoother running and more powerful motor
Minimized frictional heat

You can quickly prove this by calling on a responsible Mobiloil dealer near your farm. Mobiloil "E" is not peddled around from door to door by "job lots oil men" who get their oils from no one knows where.

The Mobiloil dealer is more interested in keeping you for a steady customer than he is in loading you up with long-profit, short-performance lubricating oil.

On his wall he has the Mobiloil Chart of Recommendations which specifies the grade of Mobiloil for every motor. Gargoyle Mobiloil "E" is correct for Fords.

In the differential of your Ford car use Gargoyle Mobiloil "CC" or Mobilubricant as specified by the Chart of Recommendations. In your Fordson Tractor use Gargoyle Mobiloils, "BB" in summer and "A" in winter.

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

READERS will notice a change in the heading of this column this week. After a nameless existence for more than two years our farm has at last been christened, "The Neshaminy Gardens." It seems to us an appropriate name, first, because of its location, and second, because of the kind of products to which it is to be devoted. The Neshaminy (Ne-sham-i-ny) Creek which winds its way thru the valley below the farm was so named by the Indians and is noted far and wide for its beauty. There are many historic incidents connected with its history.

* * *

THE word Garden has a less exact meaning. A garden may be a thing of beauty and a joy forever, but we have also known the word to cover a multitude of sins, both of omission and commission. In the country the word garden is applied only to the plot of ground devoted to raising the family supply of vegetables. In the city it usually means a nook devoted to flowers. But in a broad sense it means, "any rich, well-cultivated spot or tract of land." So, in deference to the traditions of the place, and in full consciousness of the obligations assumed, we, in full unity, name that plot of ground heretofore known as Our Farm, NESHAMINY GARDENS. And that's that.

* * *

IT HAS seemed safest to provide some stable manure for the quick growing vegetables such as beets, lettuce, carrots, etc. Hence we have had several loads delivered at a cost of four dollars per ton. It is good, partially rotted horse manure and will be just what is needed for these crops. Of course, it will be supplemented by commercial fertilizer, but certain vegetables require fertility—plus, and unless the soil contains an abundance of humus from some other source there is no quick substitute for good stable manure.

* * *

IT USUALLY pays to place a forkful of well-rotted manure in the bottom of melon hills, also. Melons are gross feeders and require plenty of moisture and plantfood within easy reach. For the other crops, such as sweet corn, peas, beans, tomatoes, potatoes, etc., we shall depend upon an alfalfa sod, fertilizer and cultivation.

* * *

THE beneficial results of cultivation of fruit trees was well shown last year. The rows of trees between which we planted vegetables made twice as much growth as the trees in the rows not cultivated during the summer. Of course, the whole orchard was disced up in the spring and soy beans and sweet clover sowed, but nothing was done afterward. This plan was followed because of the cost of hiring team work done. This year we plan to start cultivation early and continue it up to mid-July when a cover crop will be sown.

* * *

THERE was a rank growth of soy beans and weeds in the orchard last year. It is planned to put a double-disc on this and cut it up fine, and keep going over the area every few days. While there will be a supply of nitrogen available from the legumes later in the season, we shall apply a good handful of nitrate of soda to the two-year-old trees early this spring to make up for last year's neglect. It pays to keep young trees on the jump during their first years, providing the growth is secured in the fore part of the season.

* * *

I OFFER by way of explanation, if not of apology, the information that a line of type dropped out of my March 7 letter and made it appear as if I were using rather strong language in reference to the knife used in bridge grafting. The sentence should have read, "Make cuts thru the bark of the tree about two inches above and below the damaged part with the point of a sharp knife."—R. P. K.

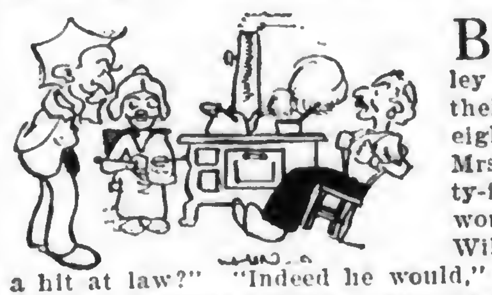
Two chance acquaintances from Ireland were talking together.

"An' so yer name is Riley?" said one. "Are yez anny relation to Tim Riley?"

"Very disthantly," said the other. "Oi was me mother's first child, an' Tim was the tenth."—Market Growers' Journal.

THE CHEERFUL PLOWMAN

A Twenty Year Narrative



BESIDE the blazing kitchen stove, aglow with crimson lids, Sam Hadley and "the Mrs." sat and talked about their kids. Sam he was crowding thirty-eight but looked a trifle more, while Mrs. Sam was rather gray tho only thirty-four. "This farming's mighty uphill work, and don't you reckon, Maw, that Willie with his gift of speech would make a hit at law?" "Indeed he would," said Mrs. Sam, "and as I've said before our Tommy's smooth at figuring and ought to run a store!"

"And Dick," said Sam, "can size up men; he's firm but not a crank; he's got a careful, level head, and ought to run a bank!" "Our Susie has a better voice than most kids of her age. It seems to me," said Mrs. Sam, "she'd star upon the stage!" Sam Hadley raised his corn-cob pipe and Mrs. Sam her spool. They vowed they'd work their knuckles bare to send their kids to school!

Beside the blazing kitchen stove, aglow with crimson lids, Sam Hadley and "the Mrs." sat and talked about the kids. Sam he was crowding fifty-eight and getting older fast, while Mrs. Sam was grayer too than when we saw her last. "Our Willie's written home for cash, and don't you reckon, Maw, that we could spare a little more while things are slow at law?" "Indeed we can," said Mrs. Sam, "and Tommy's written too. The goods aren't moving in the store, so we must help him thru!"

"I have a letter here from Dick. His bank has gone ker-smash, and Maw, to square his own account he needs a thousand cash!" "And Sam, our Susie and her man have had an awful fuss, and Susie and her little ones are going to live with us! Oh, won't it seem like heaven, Sam, to hear that voice and tone? We'll educate her little ones as we have done our own!" Sam Hadley raised his corn-cob pipe, and Mrs. Sam her spool. They vowed they'd send their kids the cash, and Susie's kids to school.—J. Edw. Tufft

Star Cars

STAR TOURING
$540 f. o. b. Lansing, Mich.

The Quality Leader of the Low-Priced Field

From the beginning our policy has been to provide "Low Cost Transportation"—low first cost plus subsequent low upkeep, operation and repairs. The first Star Car built included quality features never before offered in any low-priced car. Star quality leadership is again emphasized in the new Star

Million Dollar Motor

More than a million dollars' worth of special machinery, tools and equipment are used exclusively in making this the highest grade motor in a low-priced car. To appreciate fully its many points of superiority it must be seen and operated.

Ask your nearest dealer to show you the Star Car and demonstrate it. Then you will realize its exceptional value and efficiency.

Outstanding Points of Star Superiority

1. **Full Forced Feed Motor Lubrication** 2. Silent Chain Front-end Drive 3. Single-plate Dry-disc Clutch
4. Semi-elliptic Springs, Front and Rear 5. Worm and Gear Type Steering Gear 6. Vacuum Fuel Feed with Tank at Rear

Vol. 91, No. 12. Phila., Pa., March 21, 1925 Whole No. 1453

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

God gives every bird its food, but does not throw it into the nest.

Grain on Farms

THE amount of wheat still in the farmers' hands on March 1 was a little over thirteen per cent of the 1924 crop. This is the smallest proportion in many years. The amount of corn was about thirty-two per cent of last year's crop, and this also is the smallest carry-over in a generation. On the other hand, farmers have on hand 100,000,000 bushels more oats and 4,000,000 tons more hay than a year ago. These figures will give an intimation as to the probable trend of the markets during the next four months in these products. The farm prices on February 15, 1925, show the following increases over the same date 1924: Corn, forty cents; wheat, seventy cents; oats, nine cents, and barley, twenty-six cents. Hay sold at about eighty cents per ton less than a year ago.

Automobile Insurance

THE question of compulsory automobile insurance is being argued pro and con by law makers and the public. Those who favor such a law argue that it is now not possible to recover damages from a reckless driver who causes damage if he owns no property. Such a law would provide a fund, collected from every auto owner, which would be used to indemnify those who suffer loss by collision or otherwise when operating upon the highways.

Those who oppose such a law say that it would tend to make the careless more careless, and that it is not fair to tax every autoist to pay the damage done by comparatively few. Such a law would not cover loss by theft or fire. There is no question but that travel on the public highways must be made safer, both to life and property. We have developed machines faster than brains in this country and have reached a point where something more than speed and pleasurable excitement must be considered. The pecuniary loss suffered thru the smashing of machines is slight compared to the 22,000 lives lost and the 600,000 injuries received by travelers on the public roads during 1924. No scheme of insurance can ever compensate for such loss. The public must give more earnest consideration to making the public highways safe for the public.

Top-Dressing Wheat

THE price of wheat last year and the generally discouraging condition at seeding time last fall no doubt caused many farmers to skimp in the matter of fertilizer. While it is impossible to say what the price may be this year at threshing time, it would not be improper to top-dress the young wheat this spring. A few farmers have given their fields a thin coating of fine manure during the winter. This is a good general practice regardless of the price of wheat as it brings big returns in the grass crop.

A good bit of the wheat sown last fall was put in late and it did not get a good start before winter closed in. For such fields, unless the wheat has been winter killed or frozen out, a top-dressing with a fertilizer containing a rather high percentage of nitrogen will no doubt pay. It should be applied with a grain drill with fertilizer attachment, or with a regular fertilizer distributor. In using a grain drill the hose should be set so as to barely touch the ground. The top-dressing should be done when the ground is fairly dry and after growth has begun, say the middle of April.

Shall We Have Relief ?

ONE of the many sensible things said by President Coolidge in his inaugural address was to the effect that there is no excuse for continuing war-time taxes in peace time. The general public thoroly agrees with him in this, but the question is, how shall we go about lowering them? Not only were salaries generally raised during the past five years, but thousands of new jobs were created and thousands of unusual expenses assumed, and most of these are being continued in peace time. The land is simply littered with propaganda tending to show how the welfare of the nation is dependent upon continuing the commissions, bureaus, officials, experts, etc., many of which were established for emergencies only. One of the inconsistencies in our so-called progressive era is the increasingly large number of people who are being supported by a decreasing number of producers. How can taxes be lowered so long as this condition continues?

The Business End

DURING most of the time agriculture has been developing in this country the farmer has thought that his business was essentially a business of production; that the very nature of his calling forced him to release control of his products at the line fence and let others take them and sell them. Farmers in general have accepted and acted upon this idea until they have reached a point where it is almost impossible to proceed unless the idea is repudiated and a change made. A little thoughtful research will show that the farmers who have made their business successful in the past never did accept this general idea. Such farmers followed their products to the market and exercised a personal care at the selling end. They didn't believe the other fellow's statement that farmers should let "a business man" attend to the business end.

The very general awakening to the fact that farmers like other producers must act as their own salesmen, either singly or in combination, is bearing fruit in the cooperative movements of the day. Of course, some of them will not be immediately successful. Farmers as a class have too long neglected some things to know at once all they must know about merchandising, but we are sure they are as capable of learning it as any other class. What is most needed at the beginning is a willingness to cooperate and a willingness to learn. To this must be added a sense of loyalty that will make them stick to the ship even when breakers are near.

Beautify the Grounds

A MAN who has traveled all over the world said recently that southeastern Pennsylvania was the best-kept rural section he ever saw. By this he meant that the farms were kept in good shape, the homes were substantial and well kept, and the home grounds were well planted and cared for. Whether he was justified in his statement we do not know, but we are sure that the facts bear evidence that the generations who have lived and farmed in this section have taken more than the usual interest in making their homes and home surroundings attractive. Of course it takes years to grow big trees, but it is never too late to begin planting. Other plantings may be made which will revolutionize the appearance in a couple of years. There is no more desolate place imaginable in which to live than home grounds on which nothing is growing but weeds and elder bushes. Yet there are such places, and they have been the so-called homes of several generations. Plant trees, plant vines, plant flowers, and by so doing you will plant love of the country in the hearts of the young people.

Washington Letter

MAY ACT ON WORLD COURT.—The Senate is still in session. The world court question, the treaties and other matters with expected lengthy discussions may prolong the session for a considerable time. Senator Willis, of Ohio, has reintroduced his resolution for adherence to the world court embodying the reservations approved by President Coolidge, and Senator Swanson, of Virginia, has introduced a similar proposal. The emphasis placed upon the world court proposal by the President, the influence of the Administration in its favor, and the insistence of church leaders and many organizations that such a tribunal be created may spur the Senate to take action upon the proposal before adjournment.

WHAT DO THE FARMERS WANT?—There is a wide difference of opinion among farm organization leaders as to the future of the cooperative marketing program recommended by the President's agricultural conference. Those who claim to be in closest touch with the real farmers say there is little interest among the farmers in any sort of cooperative marketing legislation; that the farmers are not greatly concerned about what Congress does. They say that it is a dead issue even with Congress. Others are sure that an attempt will be made to pass a cooperative marketing bill next winter.

RUMORS OF A "SHAKE UP."—Many rumors of a general "shake up" in the Department of Agriculture are circulating. Dr. E. D. Ball, director of scientific work, and Chester Morrill, in charge of the packer and grain administrations, have resigned. Dr. Henry E. Taylor, chief of the Bureau of Agricultural Economics, will resign at an early date, it is said, to accept a better position elsewhere. It is predicted that there will be other changes in the department but as to what they will be Secretary Jardine has not indicated.

CHILD LABOR BILL LOSING OUT.—The child labor amendment has been defeated by many state legislatures, only two voting for ratification; nevertheless advocates of the proposed amendment say they are not going to give up the fight. In the resolution submitting the proposed amendment to the states, Congress did not designate any time limit within which they must act. This question of time and rescinding previous action may have to be settled in Supreme Court, but the proponents of the amendment are going to agitate more persistently than ever to persuade the state legislatures to ratify the amendment.

ENGLAND'S TROUBLES.—Unemployment is the ever present outstanding problem in Great Britain, says E. A. Foley, American agricultural commissioner at London, who is now in this country. One million, two hundred thousand wage earners are out of work in England at this time. More than five million persons have been aided by the "dole" system of relief within the past year. The government is obliged to feed the unemployed. Efforts have been made to locate these people on the land but they will not stay there. Inducements are offered to get them to emigrate to the British colonies where there is land to spare, but they will not go unless guaranteed that they will be provided with farms, comfortable homes, a living until they get a start, and modern forms of entertainment such as they had at home when they were employed.

NEW ZEALAND PROSPERING.—In contrast to conditions in Great Britain, Dr. S. Sorensen, the Danish agricultural representative in the United States, who has returned from a study of dairy conditions in New Zealand, says he found agriculture there in a prosperous condition. Settled by English speaking people with a favorable climate and good soil, and limited immigration for many years, wages are high and other conditions conducive to general good times. The farmers and wage earners live in well built modernly equipped houses. Great strides are being made in dairying. The New Zealand dairymen are putting a high grade of butter on the world markets that is competing successfully with the best Danish and American creamery butter.—E. E. Reynolds.

Harrisburg Letter

A MONTH OF LEGISLATING.—The Legislature of 1925 has just one month to go. On the day it met in January, April 16 was fixed as the date for adjournment and the word passed out that as few laws as possible were to be placed upon the books. There are no signs of anything going to interfere with that program. In spite of much criticism of doing nothing the work of the session has been consistently advanced and in mid March there are more bills in hand, more disposed of in committee and more on the calendars than known at this season in a dozen years.

COMMITTEES CLEARING UP.—The committees on agriculture are clearing up their files, indications being most of the bills confided to them will die and never see the floor of either house. The committee in charge of agricultural bills in the Senate has sent out both the emergency appropriation and corn borer quarantine bills and as soon as the appropriations committee sees what they mean they will come to a vote.

MILLION FOR CATTLE.—In spite of all the discussion there will be at least a million dollars voted for payment of indemnities for cattle killed because of tuberculosis and three fourths of this is scheduled, according to plans now standing, to come from general funds.

SPRING ROAD ACTIVITY.—The bill adding about a thousand miles to the state road system will likely become a law and the problem of financing it is getting earnest consideration. One scheme is to continue the gasoline tax for a year or two, devoting it to road construction. Another is for a third $50,000,000 bond issue. This could not come for several years.

THE FORESTRY ISSUE.—It seems now as tho the Senate would determine to let the people decide what they want to do about the $25,000,000 forestry bond issue. Advocates of a biennal appropriation instead of a bond issue have made a strenuous fight but they have not made much headway.

SCHOOLS WELL PAID.—The state's schools have been getting millions of dollars the last six weeks. Almost all of the money due has been paid and the contrast between what used to be the case is marked.

PEACH CURL MENACE.—Warnings are being given by the Bureau of Plant Industry of the dangers of apple scab and peach leaf curl, two common enough and costly fruit tree pests. People are being urged to spray early and to be vigilant.

HORSERADISH AND EGGS.—State marketing and food authorities have made some interesting discoveries the last few weeks. Owing to poor shipping and grading methods heavy losses have been charged against Pennsylvania egg producers. Eight per cent of the total value of a case of eggs has been a common estimate of damage on a case. The other discovery is that ground red beet pulp is being mixed with horseradish and widely sold in the state.

BILLS HIT ROUGH GOING.—The numerous educational bills designed to control children of school age outside of the school room are apparently setting for a rough time. One bill which would require certificates for boys and girls engaged in farm work or domestic service has brought forth many protests.

POWER BILLS ALL IN.—The last of the giant power legislative program is now in hand, but there is more or less uncertainty as to what is going to be done about it. The final bills dealt with rural aspects. Indications are multiplying that the survey will be continued for two years.—Hamilton, Harrisburg.

New Jersey Letter

LEGISLATURE ADJOURNS NEXT WEEK.—The New Jersey State Legislature, which has considered a number of agricultural measures this year, is scheduled to adjourn during the week of March 23. The formal year of legislative business was finished last week and a week's recess has been allowed for consideration of measures passed by the Governor. The legislative program of the farm organizations in New Jersey met with considerable success. The measures asking for an increased penalty upon the owner of a roving bull; providing means for licensing and bonding of milk dealers; appropriating funds for the conduct of work against poultry diseases and several other measures of importance to farmers, have gone thru.

CONTESTS UNDER ONE-YEAR SYSTEM.—In order to give the small breeder as well as the large commercial poultrymen an opportunity to take advantage of the trap-nesting stations at the Vineland and the Bergen County egg laying contests the entries this coming year will be received on a one-year basis. At Vineland, the contest which begins next fall will receive fowls on the one-year entry plan with ten birds to a pen and an entry fee of $20 per pen. The Bergen County contest will continue the present plan of twenty birds to the pen with an entry fee of $30. The Vineland contest has now been in operation since 1916.

SPRING WORK UNDER WAY.—Farmers in many parts of New Jersey are now out in the field on their early spring operations. Plowing in southern and central New Jersey commenced in a small way as early as late February while the favorable weather of early March found much stubble and potato land being plowed in preparation for early operations in the field. Meadow land is generally in good condition and pastures in the northern part of the state, altho exposed somewhat during the winter, are in fair shape. Some winter damage is reported on grains altho winter wheat and rye are generally in good condition.

COLLEGE FIELD DAY.—The New Jeresy State College of Agriculture in announcing the date of its Annual Field Day as June 17 this year, states that elaborate plans are under way for an even more extensive affair than in previous years. The attendance at the event last June brought out close to 2000 farmers and with good weather the College expects several hundred more will take advantage of the opportunity to visit the College this year. All departments will be opened for the inspection of visitors and the field and experimental work under way on the College farms will be described by those in charge.—B.

New York Letter

FARMERS LIKE OLD SYSTEM BEST.—At a recent conference with legislative leaders in Albany the farmers' organizations protested the proposal to abolish the present farms and markets law and opposed the proposal to place the state fair under direction of a manager.

TO RAISE MILK PRICES.—The Onondaga County Darymen's Association will ask five and one-half cents a quart for milk for the first five months of the year and six cents for the remaining months. Milk produced by the organization is retailed in Syracuse at more than double the wholesale price. The members furnish thirty-five per cent of the milk consumed in the city and have been receiving from $1.50 to $2.40 per 100 lbs. of milk.

STATE NURSERY PROGRESS.—The state nursery for tree seedlings at Lowville is entering on its fourth year, and will employ seventy-five men and women this year. There are 1200 seed beds, and 1000 more are to be added. This year over 11,000,000 trees will be available. More farmers are using trees yearly to occupy unproductive land. But perhaps more really good farms will stand idle this year than ever before.

CHANGES SINCE FIRST CENSUS.—With a farm and state census to be taken this year, there is interest in the first census ever taken in the state. Records show this to have been 139 years ago. At that time the Indians were the main problem. Henry Glen took the first census when the white population of the state numbered 238,897 in twelve counties.—M. F. F.

County News and Comment

Bedford County, Pa.—The winter seemed to have been very hard on clover and on wheat, which looks very yellow after this last hard freezing. Some of our fruit growers say the peaches are going to be a failure this year. The diseases of the apple are getting so bad that farmers will have to do some spraying in order to have fruit free from worm holes and scab. The men have been cleaning up the barn yards and hauling [illegible] while the ground was frozen and the women have had numerous quilting parties the last few months. Wheat, $2; oats 70c; corn, $1.10; fresh cows, $70@100; calves 10c; 3.7 to 1 per cent milk, $2.55; butter 45c; eggs, 25c; potatoes $1; apples, $1.50.—J. O. A., March 10.

Chautauqua County, N. Y.—Eggs have dropped in true spring-like fashion. They are now 30c; butter, 45c; potatoes 50@75c. Some farmers have made a little maple syrup, others are just tapping. The price is reported to be $3 per gallon. As the mail carrier said today, everyone has either just had the grippe or is just going to have it. Chautauqua has lived up to her reputation in the way of low temperatures, thirty-two degrees below, sometimes with sudden and great changes, and for extra measure she has treated us to one earthquake.—E. M. A., March 11.

Clarion County, Pa.—March zero weather has [illegible] the wheat fields look brown. Roads in bad condition. Lots of farms [illegible] sale, but buyers seem to be very scarce. High wages for carpenter work, and the oil and gas fields are taking help off the farms. Cattle wintering well; hay [illegible] enough but grain is scarce. Pork and beef a drug on the market at present. Market prices: wheat, $1.50; corn, $1.70; oats, 65c; potatoes, $1; creamery butter 45c; eggs, 26c; pork, 15c; beef, 10c; veal 12c.—C. R., March 9.

Clearfield County, Pa.—We have had a warm February and the heavy snows have vanished. The roads were deep in mud but with the first days of March the mercury has held near zero for several days, the road frozen and traffic [illegible]

NO MORE ACRES but much more wheat from the same acres.

State Experiment Station tests show that

IT PAYS TO USE

NITRATE OF SODA

to increase the yield of wheat

Increased yields of five to ten bushels of wheat per acre are reported by five different State Experiment Stations from using Nitrate of Soda as a top dressing in the spring.

Michigan reports a gain of 7.47 bushels from a spring top dressing of 100 pounds of Nitrate of Soda per acre.

New Jersey used 160 pounds per acre and obtained a gain of 5.8 bushels of wheat and 925 pounds of straw.

Delaware showed an increase of 4.6 bushels from an application of 125 pounds per acre.

Virginia reports that an increase of 5 bushels may be expected from the use of 100 pounds per acre.

Kentucky reports 10½ bushels increase from the same application.

Our own demonstrations in Pennsylvania and Maryland show equally good results.

This bureau recommends the use of 100 pounds per acre early in the spring.

Advice on the use of Nitrate of Soda and lists of dealers will be sent on request. In writing please add, to identify this advertisement, the number 2302

Chilean Nitrate of Soda—EDUCATIONAL BUREAU

Manager Pomona Gardens, Newark, Delaware

Cucumbers in Rows

Please give me some information about growing cucumbers. What are the early productive varieties? What plant food is best for this crop, and how should the soil be prepared?—J. A., Cumberland County, N. J.

Your best advisor as to varieties of cucumbers and planting dates is any good grower in your own neighborhood, as these things are hard to decide from a distance. I suggest that you choose the White Spine variety and make your first planting as soon as you can safely plant early snap beans, another ten days later between the first hills, so that one or the other lot will be sure to escape frost.

It is usual to plant cucumbers in rows instead of hills; then you plant the first seed, four or five to the place, two feet apart, and the second lot half way between. If there are too many by the middle of May, it is easy to hoe out enough to make a good stand.

On the Less Sandy Spots

If your land is very sandy, yet shows some spots a little less sandy than others, choose the less sandy for the cucumbers, if possible, because they need more moisture than cantaloupes, watermelons, and sweet potatoes. On the very coarse sands, tho the crop may be early, disease may be so severe that profits are small.

Manure will give you best results, placed in the rows under the seed; that is, if it is well rotted. Next best is a sod or green manure crop plowed under, and fertilizer in the row. Some years you can get good results with fertilizer alone in the rows, but in dry weather the crop runs down quickly with fertilizer alone.

If fertilizer alone is to be used, about 800 pounds of a mixture like 3-8-6 will give a crop, spread in the row. If it is to be put over the whole surface, use 1500 pounds.

Use of Fertilizer in the Hill

When you use fertilizer in the hill or row, it is best to put it there a week or ten days before planting the seed, and to mix it well with the soil. This will help prevent damage by the fertilizer.

When the ground is plowed and well harrowed, you can throw out shallow furrows five feet apart, spread the fertilizer in the bottom of the furrows, mix it with the soil there, and plow back enough soil to make a slight ridge. It may be necessary to run a drag of some kind over these ridges to make a smooth, firm place for the seed. If you use manure, make the furrow deeper, full plow depth, and make a ridge over it.

Again let me advise you to get what facts you can in your own neighborhood; every locality has ideas that work out best in that place. W. C. P.

Crust Delays Tomatoes

What means can be used to be sure of getting a stand of tomato plants from seeds sown outdoors? Sometimes I get good growth, and at other times a heavy rain comes after planting and makes a crust that keeps the plants from breaking thru. The loss of ten days in getting the plants started is too costly. L. M., Sussex County, Del.

You are right, that delay is too costly, but so is the remedy, either in time or materials, as you choose. If your land has this habit of making crusts after rains, the best thing to do is to put a mulch over the rows just as soon as you have sown the seed.

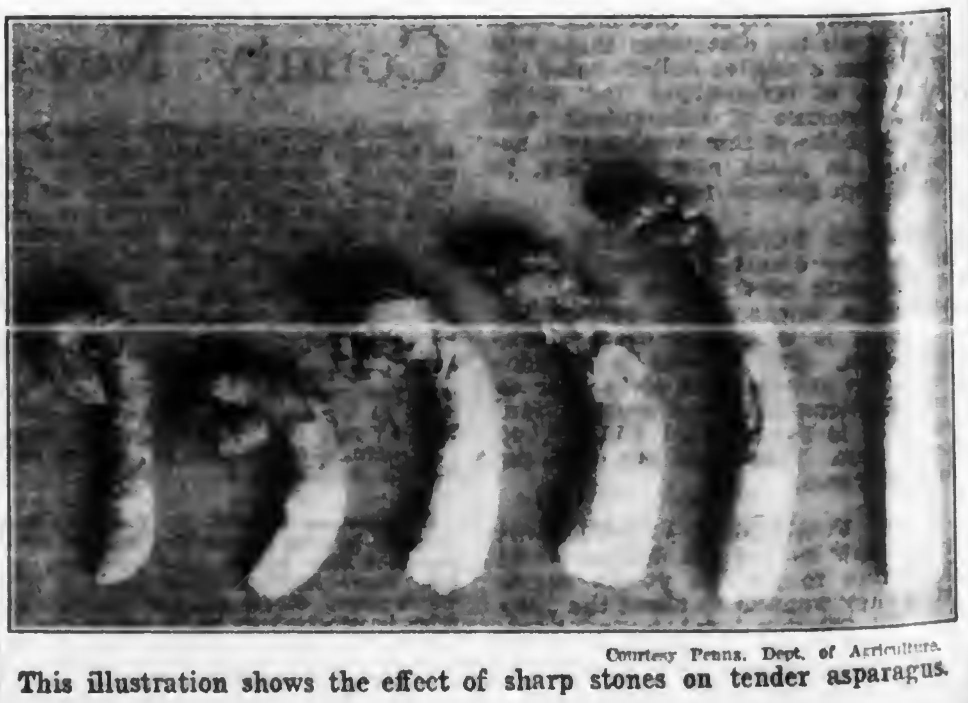
When you plan to use a mulch you do not make much covering of earth over the seed; in case you use a seed drill, take off the covering shovels and leave on the compacting wheel. The wheel will put on as much soil as you need.

Leaf Mold Usually Needs Sifting

Leaf mold from the woods will do for a mulch, put on thickly enough to cover the rows, say a quarter inch deep. It has to be sifted, usually. Probably sifted black soil from fresh strawberry fields, Gandy type, will do also, if after testing it you find it will not bake.

There is a commercial form of pulverized peat moss that can be had at reasonable prices, but it is perhaps better adapted to large scale operations where leaf mold is too hard to gather and sift. Tankage of the fertilizer type is sometimes used, but the cost is perhaps a little high.—W. C. P.

What Stones Do to Asparagus



Courtesy Penna. Dept. of Agriculture.

This illustration shows the effect of sharp stones on tender asparagus.

Manure and Moisture

BOTTOM heat for egg plants is the real thing when it comes to forcing rapid growth. Of all the plants we have to grow, these are the tenderest; they need warm feet. They damp off a little more quickly than most other things, unless it is cauliflower. I know of nothing that can be done to flats of plants that have started to damp off, except to keep the surface as dry as possible until the plants can be transplanted. Some growers sprinkle flowers of sulphur over the surface. This is worth trying. Choice of clean soil and care in watering and ventilating are the best preventives.

Heavy mulches of manure on cold soil do not help that soil to warm up and dry out. Of course, no one ought to be trying to grow the earliest crops on heavy soil, but when that is the only kind at hand, we are sure to try it for early crops. Some years we lose all we gain by getting the manure on early, with the aim of having less to do in warm weather, by having to wait longer before we can plow the land.

A Paying Garden

A ONE-THIRD acre demonstration vegetable garden in Lancaster County yielded vegetables worth $230.75 in 1924 and won $50 in fair premiums. The cost of operating this garden for the year was $59.10, according to C. R. Mason, State College vegetable gardening extension specialist. Nine garden plots totaling nearly two and one-half acres yielded vegetables valued at $1186.25 at an operating cost totaling $437.60.

Good Drainage Helps

The practice of mulching crops in midsummer to save soil water is a good one, but the principle behind it, working in spring, saves undesirable water. Good underdrainage helps, of course, to take the surplus water away, so that it is not necessary to wait so long to get the same result thru drying at the surface.

How about mulching the asparagus and rhubarb plantings with manure in late March? Is this not likely to make the crops just a little later, without making them any larger?

The manure, as fertilizer alone, will not be likely to make the asparagus bear any better crop the same year, but it is likely to help the rhubarb. When earliness is not called for, spring applications may be best because of convenience.—W. C. P.

Plant More Asparagus?

SHOULD more asparagus be planted? No one knows the true answer to this question. It seems to me, tho, that large plantings for wholesale shipping are not to be made hastily, because the commercial acreage has greatly increased in late years.

Plantings of an acre or less near local markets are much more promising, both because the heavy wholesale shipments go to the large cities, often leaving the small places poorly supplied, and because an acre or less can be handled usually with home labor.

Many a man forgets the backaches that go with asparagus harvesting, when he plans a new and larger planting. Prices have been good in late years, but we must not let this fact cause us to overlook the cost of starting asparagus.—W. C. P.

Drive over and See for Yourself

JUMP into your car and take a holiday trip to Canada.

Many of your neighbors have made the trip. They have seen for themselves what a fine country it is. They saw wheat, oats, barley, equal or superior to any they had ever seen before. They saw wonderful crops of potatoes and all garden fruits and vegetables. They saw alfalfa, clover and hay breast high. They saw fat, well-nourished cattle, horses, sheep and hogs. They saw organized, thriving communities of up-to-date people. They saw some of the finest,

Richest Land in the World

This virgin prairie land—some of the best soil in North America—can be bought at from $15 to $20 per acre, and this within reasonable driving distance from railroads, towns and markets. Good roads, churches, telephones, are everywhere.

Canada, the young giant of the north, is forging ahead. The wheat acreage of the prairie provinces has more than *doubled* since 1914. The creamery butter production of all Canada has *doubled* since 1915.

Canada grows the finest wheat in the world. For the thirteenth time Canada has captured the championship for hard red spring wheat at the latest Chicago International Show. At the same show Canada captured 24 out of 30 prizes for oats, first prize for flax seed, first prize for alfalfa, grand championship for Clydesdale stallion, three-fourths of all prizes for sheep, and many other prizes for horses and cattle. In all kinds of livestock and crops Canada grows the prize-winning quality.

Opportunities for Farmers

Canada wants more good farmers. She has the land, the railroads, the markets, the opportunities. Government officials are at the service of the newcomer to direct him to his best advantage. You owe it to yourself to get full information about these opportunities. Mail the coupon.

FRUIT TREES—large stock of all kinds trees, shrubs, plants, etc. Grow more fruit. Improve value, appearance and pleasure of your property. Increase your income. Plant good stock. Our trees grow. Free catalogue. Salesmen wanted. Mitchell's Nursery, Beverly, O.

COPPER SULPHATE
(Blue Vitriol)

The basis of Bordeaux Mixture
(Copper Sulphate and slaked lime)

Nichols Triangle Brand Copper Sulphate

Large and small crystals, pulverized—99% Pure.

The only known control for fungous diseases of fruits and vegetables.

Make Your Own Bordeaux

Bordeaux Mixture loses its efficiency on standing and should be freshly made. Use Triangle Brand Copper Sulphate and prepare your mixture when you need it. Triangle Brand is clean and pure. Packed in strong new barrels and kegs.

Nichols Copper Co.

25 Broad Street New York

More than
400,000,000
pounds
of cull apples last year

Most of these culls were caused by aphis. These insects are very destructive. They not only stunt and deform the fruit, but also retard tree growth and help spread scab and blight.

Damage by aphis can be prevented by spraying with Hall's Nicotine Sulphate. It contains 40% pure Nicotine—the deadliest aphis poison known.

Being a vegetable extract, it does not harm blossom, fruit or foliage; but it does kill aphis every time.

A ten-pound tin makes 800 to 1100 gallons of spray. The cost is less than 2c a gallon. Buy from your dealer. If he cannot supply you, send us your order along with his name.

NOTE—Hall's Nicotine Sulphate is also deadly effective against red bugs, leaf hoppers, thrips, psylla and many similar insects.

It mixes easily with Arsenate of Lead, Lime Sulphur and any other standard insecticides.

Spraying for the Scale

I have some waste oil from motor car shops with some grease in it. Can this be used safely for a dormant spray on peaches and apples? If not, what should I use?—T. M., Atlantic County, N. J.

It would not be advisable to use waste motor oil for spraying fruit trees. It would kill the scale, but might kill or injure the trees also, being variable and unstable in composition.

The following formula is recommend by the U. S. Bureau of Entomology:

Red engine oil, diamond paraffin oil, or oil of similar grade	2 gallons
Water	1 gallon
Potash fish oil soap	2 lbs.

These materials are brought to a boil in an iron kettle, then removed from the fire, and emulsified by pumping twice, while still hot, back into itself. This is a stock emulsion and contains 66⅔ per cent of oil. For the dormant spray against San Jose scale, a two per cent dilution should be used, or three gallons of the stock material to ninety-seven gallons of water.

Oil sprays are cheaper than the standard lime-sulphur spray, and are fully as effective against scale insects, but are inefficient for fungous diseases, hence most growers prefer to use lime-sulphur, especially in the delayed dormant treatment.—S.W.F.

Spring Borer Treatment

Is it safe to use paradichlorobenzene on peach trees for borers in the spring?—P. R., Cumberland County, New Jersey.

Paradichlorobenzene may be applied to peach trees in the spring. This is advised when for any reason the treatment is not given the preceding fall, but fall treatment is preferable, both from the point of view of greater effectiveness of material and lessened danger of injury to trees.—S. W. F.

Grafting Black Walnuts

Please advise me if black walnuts and English walnuts and shellbarks can be grafted on white or pig-nut hickories? When should the work be done and what size trees should be used. Can pecans be grafted also?—H. T. C., Kent County, Md.

Black walnuts cannot be grafted readily on the white, or pig-nut hickory (carya glabra) but will take on butternut. Its own seedlings are the best stock. Shagbark hickory (carya ovata) can be grafted on the pig-nut. The English or Persian walnut, cannot be grafted on the pig-nut, but can be grafted on black walnut. The pecan does not succeed on the pig-nut.

Graft in the Spring

Established trees from three to twelve years old make good stocks, but older trees can be top worked. The grafting is preferably done in April or May, but the scion wood (one year old wood) should be cut not later than the middle or last of February, and stored in a cool cellar, wrapped in moist sphagnum moss. Cleft or bark grafting may be used, and both stubs and scions completely covered with melted paraffin. The buds readily push thru this—S.W.F.

"I have only one request to make," groaned the college man who had come to participate in the harvest.

"What is that, Mr. Smart?" returned the farmer.

"Please let me stay in bed long enough for the lamp chimney to cool off."

Club Boy Grows Tomato Plants

AT THE Maryland Vegetable Growers' Association annual meeting, in conjunction with that of the Maryland Agricultural Society and the Maryland Farm Bureau Federation, held at Cambridge recently, one of the most interesting reports of successful work accomplished was that of the community tomato bed planted and cared for by Stanley Sutton, a nineteen-year-old Kent County club boy.

Stanley has been a club boy for several years. First he raised corn. After a time his brother Albert worked with him in growing purebred seed corn. They sold their annual crop to the farmers of their county receiving fair prices.

Stanley got fourth place in the cattle judging contest at the Timonium Fair one year and brought home proudly a purebred Holstein bull calf. After a little he bought two dairy calves, purebred Holsteins. He was sent to Camp Vail, Springfield, Mass., as a Maryland club member representative to the Eastern States Exposition; he came out first in the dairy judging contest there.

County Agent Derrick wanted someone to raise quality tomato plants. He asked young Sutton if he were willing to try it; the youth went at the task with might and main. He and Mr. Derrick selected about an acre of ground formerly planted to alfalfa as a very suitable piece.

The preparation of the soil was a serious task in itself. After the plowing and harrowing were done, alfalfa crowns to the tune of several wagon loads were picked up. On this ground were applied about eighteen tons of well composted manure, fifteen hundred pounds of 2-8-5 fertilizer, about two and one-half tons of leaf mold, seven hundred pounds of eight per cent tankage as a mulch, and ten tons of chicken manure.

Grew a Million Plants

Tomato plants! There were about a million of them, but the weather was decidedly unfavorable and so there were only about half a million of fine ones to sell to the growers of Kent County. The price received was $1.50 per thousand.

Another brother, Martin, also has won honors. His purebred Holstein heifer had sixth place at the Timonium Fair and ninth place at the National Dairy Show. This same animal won fifth place as a yearling at Timonium this year. Martin was on the team that represented Maryland at the National Dairy Show. Another brother, Albert, mentioned above, has made a success in raising seed corn. He is only fifteen and doubtless has many agricultural victories before him.—Marylander.

SAVE THE TREES

Bridge and Cleft Grafting on Trees Damaged by Rabbits

R. P. K., in the March 7 number of Pennsylvania Farmer has a timely article on bridge grafting. My method of bridge grafting is a little different from the usual and I have been very successful with it in my own orchard.

For rapid work where much injury has been done by mice or rabbits I use a half-inch chisel to make the openings for inserting the scions. The punctures are made slanting so as to be sure to cross the cambium layer of the bark. The scions are cut in the usual way and sprung into place, then waxed over with melted paraffin. This is the best and most easily applied of any article now known to use when grafting. A thin coat applied with a camel hair brush is all that is needed and it can be rapidly used to cover the scions as well as the chewed surface of the tree.

Cleft Graft for Small Trees

R. P. K. advises replanting where trees one or two years old are girdled. This I don't do unless the bark of the roots is destroyed. A young tree one or two years old has already formed a root system and the benefit of this can be gained by cleft grafting the young tree below the injury and covering the wound and scion with melted paraffin. A scion placed on a young tree makes a very vigorous growth and a year or two is gained over replanting.

When even a small amount of grafting is to be done it will pay anyone to get a wax melter. The amount of heat applied is easily regulated with the wick and one can keep on grafting for hours. There is no assistant needed and the paraffin is not a mess like the usual grafting wax.

In bridge grafting be sure to set your scions right end up and not up end down.—J. S. Rittenhouse, Berks County, Pa.

Pennsylvania's Nurseries

THERE are approximately 300 licensed nurseries in Pennsylvania whose 4500 acres of growing nursery stock are annually inspected by the nursery inspection service of the State Department of Agriculture. These state inspections are made to discover insects and diseases which may be present. Infested or infected stock is promptly cleaned-up or eliminated from the nurseries under the supervision of the state inspector. Every effort is made to insure the cleanliness and freedom from diseases and insects of stock before licenses are issued to the nurseries.

The growth and prominence of the nursery industry in Pennsylvania is due to the favorable geographic and climatic conditions. The native flora of Pennsylvania is particularly rich in desirable trees and ornamental flowering shrubs.

The climate is such that both southern grown and northern grown species do extremely well in the state. This makes it possible for Pennsylvania nurserymen to acclimate northern and southern grown species for the needs of buyers within the state.

Some motorists, riding near a farm orchard, stopped the car, got out, climbed the fence, and gathered half a peck of apples. To complete the "joke" they slowed down as they went by the farmhouse, and called out to the owner: "We helped ourselves to your apples. Thought we'd tell you."

"Oh, that's all right," the farmer called back. "I helped myself to your tools while you were in the orchard."

Seed Oats

This Field of "Improved White Russian" Oats yielded 100 bushels per acre

Heavy-Yielding Variety—Clean, Sound Seed

Good Seed Oats are scarce this Spring, but we've a good supply—for those who order promptly. Strong-germed, plump Oats, carefully cleaned by modern machinery—free from foul weeds. "Improved White Russian" shown above, has pleased our customers for nine years. A splendid "horse-mane" (side-type) Oats. Has strong, stiff straw. Large well-filled kernels with thin hulls. Our seed was grown in North Dakota—very hardy. Three times cleaned. Bags included in price and freight prepaid. **Catalog** also describes "Shadeland Eclipse," "Shadeland Climax," "Silver Mine," "Swedish Select" and "Peerless Oats." **All tested varieties.**

Corn *Seed That Will Grow -Kinds for Crib and Silo*

"Lancaster County Sure Crop"—Splendid All-Purpose Variety

The best Seed Corn costs so little—only about 50c an acre—you can't afford to take chances. Ours is grown in rich Lancaster County soil, famous for big corn crops. Carefully cured. Tested for germination—must test 90% or better. Shipped in strong new cotton bags on Money-Back Guarantee. Time permitted for making your own test.

Hardy Clover and Alfalfa Seed

Medium Red, Alsike and Sweet Clover—all cleaned clean with special machinery. Our Medium Red is hardy Northern grown seed—will withstand heavy freezing. "Northwest" brand and true "Grimm" Alfalfa, also very Fancy Kansas Seed. Tests average over 99½% pure.

PAN-A-CE-A

takes care of the little-chick ailments

INDIGESTION — Diarrhea — Leg Weakness—Gapes.

It will pay you to look well to the digestion of your flock right from the start.

Indigestion is responsible for most of the bowel troubles.

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily.

Pan-a-ce-a contains Nux Vomica; that promotes digestion—calls into healthy action every little chick organ.

Pan-a-ce-a contains Quassia, which creates a healthy appetite.

Pan-a-ce-a contains Iron to enrich the blood, essential to little chick growth.

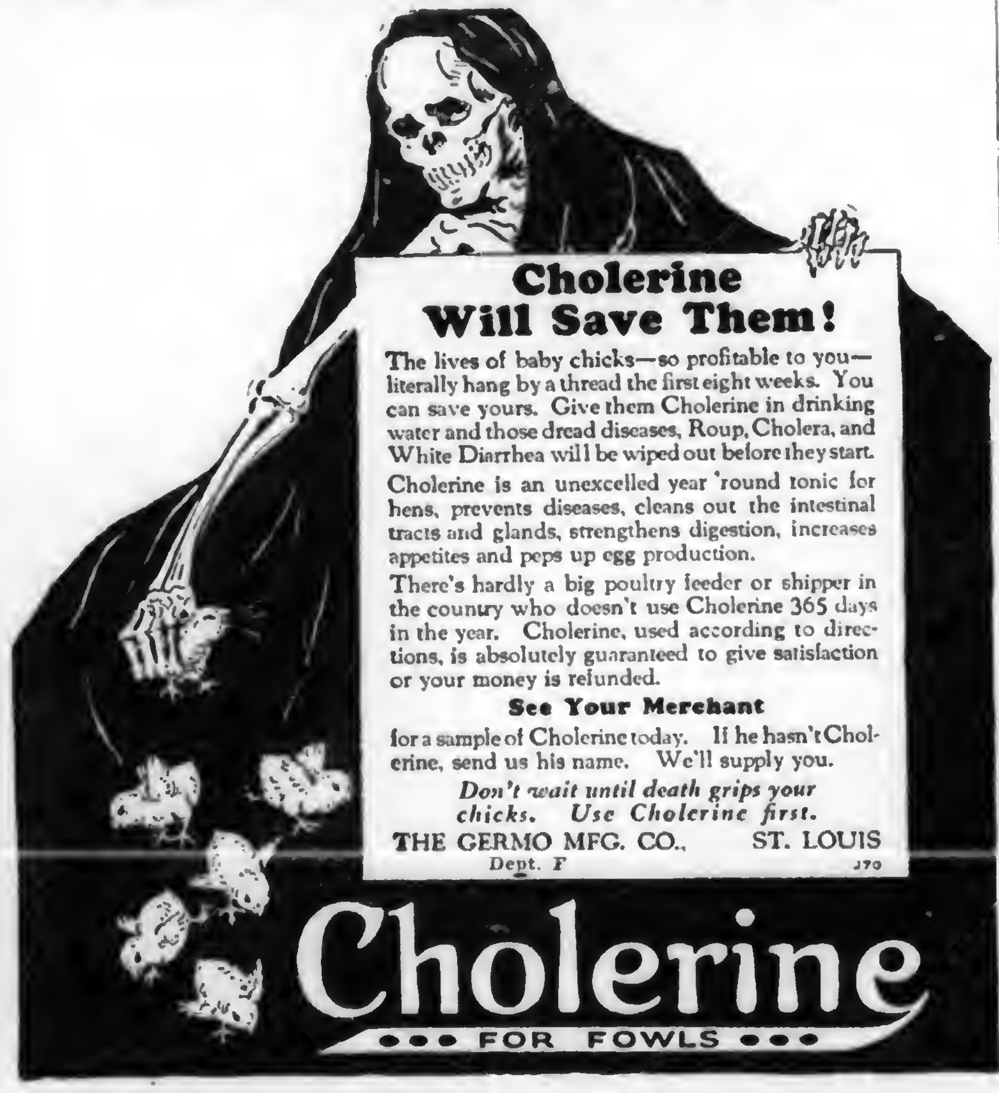
Pan-a-ce-a regulates the bowels —keeps the chick's system free from poisonous waste materials.

No indigestion, no diarrhea, no leg weakness, no gapes, where Pan-a-ce-a is used.

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

DR. HESS & CLARK, Inc., Ashland, Ohio

Dr. Hess Instant Louse Killer Kills Lice



Cholerine Will Save Them!

The lives of baby chicks—so profitable to you—literally hang by a thread the first eight weeks. You can save yours. Give them Cholerine in drinking water and those dread diseases, Roup, Cholera, and White Diarrhea will be wiped out before they start.

Cholerine is an unexcelled year 'round tonic for hens, prevents diseases, cleans out the intestinal tracts and glands, strengthens digestion, increases appetites and peps up egg production.

There's hardly a big poultry feeder or shipper in the country who doesn't use Cholerine 365 days in the year. Cholerine, used according to directions, is absolutely guaranteed to give satisfaction or your money is refunded.

See Your Merchant

for a sample of Cholerine today. If he hasn't Cholerine, send us his name. We'll supply you.

Don't wait until death grips your chicks. Use Cholerine first.

How to Treat Common Diseases of Baby Chicks

By L. W. STEELMAN

Poultry Specialist, Penna. State College.

LEG weakness is an ailment of baby chicks with which most poultry keepers are well acquainted. This trouble can be prevented almost entirely if the following measures are given due consideration.

Make chicks exercise for every bit of scratch feed they get. Have one inch of litter on the floor. We find that hay chaff, or sweepings from the barn floor which are free from mold, are very successfully used on some of our larger commercial poultry farms. Feed milk and greens of some kind liberally.

Infertile eggs may be fed by boiling them twenty to thirty minutes and grinding them thru a food chopper, shell and all, and feeding at the rate of one egg daily for every thirty chicks. The purpose in boiling them for this long period of time is to make sure that disease germs, such as white diarrhea, will be killed.

What White Diarrhea Is

Cod liver oil is a splendid thing to feed chicks. Mix one-half pint to twenty-five pounds of mash. It is well to mix cod liver oil with the mash at least every three to seven days and not hold it longer than this period of time, as it would lost its strength. Bone meal, such as steam cooked bone, can be added to the mash mixture to advantage. Leg weakness may also be caused by allowing the chicks to over-eat, or by using a poor system of feeding.

Again, we find this trouble where poultrymen keep their brooder houses entirely too warm or where chicks are allowed to crowd in the corners or under the brooder stove at night. It is very important that we get chicks out of doors in the direct rays of the sunlight by the time they are seven to ten days old. This is one of the best preventative measures that can be followed.

Scientists tell us that the ultra violet rays of sunlight are absorbed by ordinary window glass. It is, therefore, necessary to get the chicks out of doors in the direct rays of the sun. This in turn also permits them to consume a greater amount of less digestible material and also some roughage.

The one important trouble that confronts every poultry keeper is the so-called white diarrhea in chicks. If it were possible to ask 1000 poultry raisers how many ever had this disease in their flock at one time or another, I am sure 999 would state that their chicks had been affected by this disease.

It is a very hard matter for a poultryman to detect white diarrhea when his flock is so affected. When the chicks die during the first three or four days after being hatched, the trouble may be white diarrhea, altho such losses may be caused by poor management. The best way to detect this disease is to have a test made by a bacteriologist.

How Disease Is Transmitted

Most of the trouble is nothing more than bowel trouble. There is quite a big difference between bowel trouble and white diarrhea. The latter disease is transmitted from the hen to the chick thru the egg from which it is hatched, and the diseased chick in turn will contaminate a whole flock of healthy ones. Bowel trouble is caused mainly thru faulty or poor management.

This latter trouble may be brought about by over-heating the eggs in the incubator or over-heating the chicks in transit. For example, chick boxes may be placed against steam pipes in a railway car, or they may become chilled by putting them off at a station where they are unprotected on a cold, windy day. They might also be chilled or over-heated under the brooder stove.

Again, it may be caused by feeding too soon before the yolk is properly absorbed, using a food that is hard to digest before first feeding grit, feeding them something that is constipating, over-feeding, or by giving sweet milk one day and sour milk the next day.

Coccidiosis Is Destructive

Coccidiosis is a problem with which most Pennsylvania farmers are well acquainted. It is one of the most destructive diseases which makes its appearance in the flock after the soil becomes dried out in the spring and the days become warm. On account of the damage done to flocks of chicks during the months of May and June, most poultry keepers should learn how it acts.

You no doubt have noticed some

icks standing in the corners of the rooder houses, their wings drooped nd their eyes closed, or perhaps anding near or under the brooder ove. When they are picked up, one ill notice that they may have food their crop, but are almost as light a feather.

The coccidium is a parasite that is ked up from the ground in the re stage. On passing thru the instine, it develops and multiplies idly. These parasites seem to ialize in destroying the walls of e intestines which feed the blood. reality the chick will eat and yet e from starvation due to the fact at the blood has not been properly urished.

Young Chicks Have Disease

This disease is most common ong chicks between the ages of o to ten weeks, altho it has been ticed in younger birds and also in ture hens. Post mortem examinan often shows a thickened small testine, with a pale mucus memane extending its entire length. en the walls of the intestines are amed. The ceca, or the long blind uches, attached to the lower parts the intestine may also be affected. ey are inflated with a mass which either hard and core-like or soft nature.

The trouble is most common among hatched birds, especially where y are reared on ranges. Faulty agement, such as poor rations, er-feeding, overheating and chill, will often bring about this uble. All of these may so devital the birds that they become easy for the parasites.

Prevention Is Best Cure

Prevention is the best cure. This in adequate sanitation and keep the youngsters fit by feeding and using them properly. The treatnt that has been recommended d used with success during the t few years is as follows:

1. Do not over-crowd.
2. Feed sour milk at all times.
3. Feed a limited amount of wet, mbly mash two or three times ly. Do not over-feed.
4. Give no hard grains until birds again normal.
5. One teaspoonful of hydrochlor- acid to each quart of drinking ter.
6. Give one-quarter pound of ep- salts to every 100 chicks in a t mash. One dose is usually sufient.
7. Observe strict sanitation in ltry houses and yards.
8. Clean houses daily and burn the litter.
9. Spray the floor with a good nfectant.
10. Remove birds to new ground plow and spade the yards and ways and lime heavily.

an Ground Prevents Many Losses

Some of the experiment stations recommending the use of powd crude catechu in three gallons water. Allow the chicks this water for three days, a clear drink for day, then repeat the medicated k for three days. It is advisable give a dose of epsom salts at the e of one quarter pound to every chicks each week while this is fed.

One of the most successful poultry in the state keeps diseases of cks down to a minimum by pracng a three-year rotation in order keep his chicks on fresh, clean und.

t is claimed by some poultry horities that fifty per cent of the cks produced die each year due to r feeding. The feeding system lined in the accompanying chart one that has been used with sucs by some of the larger commer poultrymen of Pennsylvania.

Chick Feeding Chart

Age	Mash	Grain	Drink
2 days to 2 weeks	Wheat bran, 5% dried buttermilk, 2% mineral mixture	Chick feed or rolled oats	Water
2 weeks to 4 weeks	½ wheat bran mixture, ½ growing mash	½ chick feed, ½ cracked corn and wheat	Water
4 weeks to 8 weeks	Growing mash including mineral mixture	Cracked corn and wheat	Water
8 weeks to 6 months	Growing mash (hopper fed)	Corn and wheat (hopper fed)	Water

Growing mash contains:

200 lbs. wheat bran, 200 lbs. corn meal, 100 lbs. ground oats, 100 lbs. wheat middlings, 50 lbs. fish meal, 35 lbs. dried buttermilk, 30 lbs. mineral mixture (3 lbs. bone meal, 2 lbs. pulverized limestone, 1 lb. table salt).

If liquid skimmilk or buttermilk is available, omit dried buttermilk in each mixture.

Keep grit and oyster shell before chicks at all times.

Meat scrap may be substituted for fish meal.

Loafers *never* produce

STUMPS and boulders are "loafers" on the farm—they produce nothing while they prevent the entire cultivation of the field.

Stumps and boulders are breeding places for vermin and are frequently the cause of broken implements. Thoroughly clearing the land you now have under cultivation increases its value and lessens the cost of farming.

Ask for du Pont, and *look* for the du Pont Oval *when buying* dynamite. Your dealer handles the du Pont dynamite you need to move those "loafers"—the stumps and boulders.

And don't forget—a copy of the "Farmers' Handbook of Explosives" is yours for the asking. Its 110 pages tell all about the use of dynamite on the farm. Write for your *free* copy today.

Need Better Radio Manners

The President Wasn't Treated Right

NOW that we git our speeches by radio somebody has to fix up some new rules on ettyket. I heard President Coolidge talk when he was swore in the other day, here in the Agricultural College chapel and it made me feel kind-a funny because I didn't know exactly how to behave. Josephine not bein' thar to keep me straight on my manners. When that thar announcer sez over the radio that the Congressmen and Senators was filin' in from the Capitol to the speaker's stand, I didn't know if I should let out a good western holler, clap my hands, or put one hand on my pocketbook.

When the Chief Justice give the President the oath of office I nearly choked, I felt that solemn. The trouble is we been gittin' our information thru the eyes, visual instructions it is called, like movie films, and some kinds of shows where the baldheads allus take the front row. We're all the time lookin' at something or other and sometimes, in my holler than thou moments, I feel that it's being a blessing to be near-sighted.

They Walked Out on Coolidge

Now along comes this here radio and it upsets all our notions about imbibin' information, because it gives it to us thru the ear only. We cain't see the speaker to make faces at him if he sez something we don't approve of and we don't know hardly whether we ought to applaud when he makes a good hit.

We got to git used to the new way and fix up some kind of rules to go by. When I seen people git up in that audience and go out while President Coolidge was talkin' I felt ashamed of 'em. It seemed like the President was right thar, no matter if he was 2000 miles away. What's 2000 miles to the radio? They ain't no distance any more and if you kin bring the voice so near, why it's just the same as if the man was thar hisself. . . . What next? Science is a wonderful thing.—Thos. Jefferson Putnam, "Specialist in Rural Devilment," Colorado Agricultural College.

Laurels for Lewisburg

INVESTIGATORS for the United States Department of Agriculture have been making a study of small towns and villages in the United States, with the view of learning how these small centers of population may be made more attractive places in which to live, and better shopping, school and social centers for farmers.

The town of Lewisburg, Union County, Pa., is cited as a good example of what may be done when people plan and carry out a program of community improvement.

The Department points out that a town dump at Lewisburg has become a scenic asset thru the activities of women, who formed a civic club, launched civic improvement propaganda, and accumulated funds for an improvement program. Formerly the first impression a visitor got on arriving and the last one he took away with him on leaving was one of squalor, because the town dump lay across the main approach to the town. Today the land where the dump stood is the property of the civic club. Old shacks have been removed from it and refuse cleared away. It has been leveled and planted to grass, flowers and trees. It is spanned by gravel walks and surrounded by ornamental lighting standards. Now the visitor enters thru a green and smiling park.—W

News and Notes

HERE'S an item for those who are interested in speculation. If you were a billionaire in 1914 and had bought one billion dollars' worth of German paper money,—marks,—your investment would now be worth one-tenth of one cent. The new German bank, established under the Dawes Plan, redeems the old paper money at the ratio of one trillion to one.

FARMERS in western Illinois are seeking government aid in their war on wolves. They claim that the fight against these animals in Missouri has driven them across the frozen Mississippi into the border counties where they are causing heavy losses to sheep growers.

* * *

NEARLY 700,000 persons in the United States were married when they were under sixteen years of age, or were married to children under sixteen, according to the Russell Sage Foundation. Early marriages are more frequent in small towns and rural districts than in large cities. The percentage of fifteen to nineteen-year-old girls who are married is lowest in New England, the ratio being half of the percentage for the country as a whole. The percentage of youthful marriages is highest in the central southern states.—W.

Moyer
Specific for White Diarrhoea

Don't wait for white diarrhoea to appear in your young broods. See that every newly-hatched chick drinks first of all, water containing Moyer's Specific for White Diarrhoea. See that every one of them gets it. See that they drink nothing else for the first thirty-six hours.

This noted prescription has proven over and over again to be one of the most valuable remedies that the poultry raiser can keep on hand. Used both as a curative and preventive measure it enables him to cut his losses from this dreaded disease to practically nothing, and to keep it out of his flocks.

Tile Drain Preferred

I have a field that is somewhat rolling and with the exception of a wet spot at each end is very productive. These spots are non-productive in any season. One side seems to dry up during a hot summer. It is pretty level and the ground bakes so that the crop never does well there. The other side slopes considerably but never dries up completely. It looks as tho this field might easily be drained. What kind of drain would be best; one of stone or of tile?—R. E. Y., Somerset County, Pa.

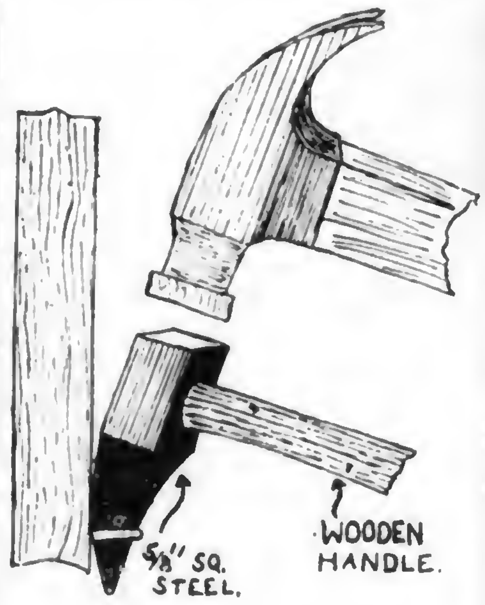
You evidently have a low spot at one end of your field and a seeping spot at the other sloping end. I have no doubt that a very modest little drainage system could be installed which would relieve the situation entirely.

From the standpoint of economy, efficiency and time and labor saved, I would suggest a tile drain rather than one of stone. My suggestion would be that you consult your county agricultural agent and have him arrange for an extension agricultural engineer to look over your field. He can guide you much more intelligently if he is on the ground than I could by merely replying to your inquiry.

A little extra time devoted to properly planning the system, digging the tile ditches to proper grade and running them to the best outlet, will mean much in ultimate results.

I would further suggest that if you lay a tile drainage system, you use nothing smaller than a four-inch line for the laterals and perhaps a six-inch tile for the mainlines. Much will depend upon the extent of the system, however. In any event, I feel certain that drainage will solve your problem.—Frank A. Meckel.

A Hardy Staple Puller



HERE is a handy tool that we have constructed for use when pulling staples from an old fence. It is quite simple, and any blacksmith can make it. The tool consists of a piece of five-eighth-inch steel sharpened and bent, with a wooden handle thru a hole in the steel head. In use the point of the implement is driven thru a staple, and an upward lift on the handle draws the staple out.—A. C. W.

Field Selection Best

COUNTY AGENT F. W. MYER, of Northumberland County, reports that seed corn secured from the farm of P. S. Albright, Milton, which was selected in the field before the corn was cut and then placed on a hanger to dry, showed a germination of ninety-five per cent. The seed corn, which was selected in the field at husking time, germinated eighty-one per cent, and a composite sample taken from the crib tested but seventy-seven per cent.—B.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Cows Need More Protein

What should we feed to cows to produce a large quantity of milk? I am feeding wheat bran, corn bran, oats chop, a commercial stock feed, corn chop, besides fodder and hay.—G. A., Montgomery County, Pa.

The feeds which you mention are all low in protein and a mixture of them will not make a good milk producing ration. Corn chop contains 9.5 per cent protein, oat chop about twelve per cent, the stock feed you mention about ten per cent, wheat bran sixteen per cent and corn bran 9.7 per cent. A mixture of these is likely to contain only eleven to twelve per cent of protein whereas to go with roughage such as fodder and mixed hay the grain mixture should contain approximately twenty-four per cent protein.

The following mixture would give you much better results than your present mixture:

100 lbs.	wheat bran
100 lbs.	ground oats
100 lbs.	cottonseed meal
100 lbs.	linseed oil meal

Feed this mixture at the rate of one pound of grain to every three to three and one-half pounds of milk produced by a Jersey or Guernsey cow, and one pound of grain to every four to four and one-half pounds of milk for a Holstein or Ayrshire cow. —A. A. B.

"Tuts" Was Champion

COW testing associations spot the best cows in the herd as well as aid in weeding out the low producers. "Tuts," a purebred Holstein cow, produced 2538 pounds of milk during January and thereby won first honors over all association cows in the state for the month. The milk tested 3.9 per cent, yielding ninety-nine pounds of butterfat. She was kept under ordinary farmer's conditions but was milked three times a day. Her feed consisted of 540 pounds of hay, 1000 pounds of silage and 650 pounds of grain.

"Tuts" is owned by Mast Stoltzfus, Morgantown, Pennsylvania, a member of the Goodville Association in Lancaster County. Another Holstein cow owned by Mr. Stoltzfus produced 1885 pounds of milk.—F.

Bradford Holstein Sale

THE Troy-Canton Holstein Breeding and Sales Association of Bradford County, Pa., is to hold its fifth sale of registered Holsteins in the Sale Pavilion at Troy, on Saturday, May 9th. About sixty animals, practically all from herds that are fully accredited or are being tested under the accredited herd plan, will be offered to buyers. Among this number will be several young cows fresh or due soon, several bred heifers for fall freshening and a limited number of bulls of service age.

Catalogs of the sale may be obtained from D. K. Sloan, Towanda, Pa. Other members of the sale committee are: R. H. Fleming, Alba, Pa., J. O. Cowl, Troy, Pa.—W.

Her Own Monument

A FITTING memorial in honor of her life's work of usefulness is being planned for Lilith Gem Kolkluff, a purebred Holstein, owned by the Pennsylvania State College, according to P. D. Jones, dairy herdsman. After producing nearly fifty tons of milk during five lactation periods, her usefulness is to be extended indefinitely after her death, if arrangements now being made to mount her skeleton for use in the classrooms of Ag Hill can be carried out. Certain measurements of this animal will be taken for use in the experiment now being conducted in cooperation with the United States Bureau of Dairying. In this experiment an effort is being made to secure data to use in the development of a more scientific basis for judging. —B.

We Waste Much Plant Food

By J. G. LIPMAN

Staff Contributor and Adviser

THE subject of conserving the nitrogen in animal manures is still receiving much attention. There is justification for the interest in the subject, since the annual losses of ammonia from animal manures are so great as to involve values running into many millions of dollars.

It is well known that the loss suffered by farmyard manure may be three-fold in character. Manure exposed to the weather is certain to lose a considerable proportion of its nitrogen and potash because of the leaching action of rain. About one-half, or more, of the total nitrogen and potash are present in fresh manure in water-soluble form. Hence, the losses due to leaching are bound to be very large.

Loss of Ammonia

Another source of loss which falls on the nitrogen only, is that due to the decomposition of manure and the escape of the ammonia formed in the process of decomposition. The keeping of manure under cover will protect the manure against losses due to the leaching of soluble nitrogen and potash compounds. It will not, however, protect the manure from losses due to the escape of ammonia.

A third source of loss lies not in the direct escape of ammonia or other constituents of manure, but in the changing of the soluble and, therefore, more readily available constituents into less soluble and, therefore, less available forms from the standpoint of crop production.

In manure stored in heaps or under the feet of livestock there is an intensive multiplication of bacteria and fungi. These eat up, as it were, the soluble nitrogen compounds and convert them into less soluble products, which, before they become available to crops in the field or garden, must undergo decomposition.

Sheds Prevent Leaching

These facts, already familiar to every progressive farmer, are used as the basis of methods of treating manure that would diminish the losses referred to above. Farmers attempt to protect the manure against the leaching action of rain by keeping it under cover.

In some of the European countries covered barnyards are considered quite essential on every well-kept dairy or livestock farm. The tendency to build covered sheds has become more manifest of recent years in certain sections of the United States: in others the covered shed is less in evidence than it was twenty-five or more years ago.

Where covered sheds are not available and where the storing of any considerable quantities of manure for any length of time is not practicable, livestock owners prefer to haul the manure to the field and spread it at more or less frequent intervals. The soluble nitrogen and potash compounds in fresh manure are thus washed into the soil and held there more or less firmly.

Cause of Fire Fang

While this is not the most effective method of conserving plantfood in animal manure, it is a reasonably effective method and perhaps the most acceptable one where manure cannot be carefully stored under cover.

As to the losses which occur in manure heaps kept under cover, it is recognized that in so far as the air is allowed to enter freely into the interior of the heap bacterial activities will be stimulated and, as a result of the more rapid decomposition of the manure, much ammonia may escape.

Furthermore, the rapid rise in temperature, because of the intensive multiplication of bacteria, leads to so-called "fire fanging," an undesirable condition which involves not only the escape of ammonia, but also the transformation of the readily available nitrogen compounds into the more insoluble and less available products.

To avoid this condition a number of expedients have been adopted. In some of the European countries—notably in France and Belgium—the solid and liquid manure are kept separate.

The liquid manure is allowed to run into a cemented pit, where certain changes take place, but the resulting losses of ammonia are very slight. The solid manure, kept by itself and in a moist condition, does not seem to suffer any serious loss or deterioration. Shortly before hauling the manure to the field the liquid manure is pumped on the solid manure and the entire mass then hauled and spread.

Keeping Out Air Prevents Losses

In other cases the manure is allowed to accumulate under the feet of cattle in open or covered barnyards and because of the moist condition of the manure and the constant tramping of it by the cattle, the air is more or less thoroly kept out of it and the resulting losses of ammonia are, therefore, quite slight. Where manure is stored in heaps these are also kept moist and compact in order that the air may be kept out as much as possible and the escape of ammonia prevented.

(Concluded on Page 19)

One Way to Lose Money

A NORTHERN New Jersey fertilizer dealer is quoting a 4-8-4 mixture at $36.80, and a 2-8-2 mixture at $27.20, both f.o.b. the factory. One ton of the former at $36.80 contains just as much plant food as two tons of the latter at $54.40, excepting eight units of phosphoric acid which can be purchased retail at about $9. In other words, the purchaser is losing $8.60 when he buys two tons of the 2-8-2 fertilizer instead of a ton of the 4-8-4. An even greater difference would be shown in comparing a 2-8-2 with a still higher analysis mixture such as 5-10-5.—H. R. Cox.

Addressed to the man who *"will probably buy a milker some day"*

PERHAPS you are one of the thousands of men who are dairying in a small way—say six or eight cows.

You expect to buy a milking machine some day. Very probably it will be an Empire Milker. You realize that hand-milking can not compete with Empire milking. That it is becoming harder and harder to get competent help. That hand-milking is a back-breaking job.

You probably have figured out that you will get your milking machine when you have a dozen cows or more. You haven't been able to see quite how it would pay you to install a machine for *six* or *eight* cows.

You were perfectly right—*up to now.*

But you aren't right about it any longer.

And here's why—

The Empire Electric Milker Makes Machine Milking Profitable for the Small Dairy

After several years spent in getting it absolutely mechanically perfect, the Empire Milking Machine Company is now offering the Empire Electric Milker.

With a ¼ h.p. motor, the Empire Electric Milker operates a Double Unit Milker—milking two cows at a time. The ½ h.p. outfit operates two Double Units—milking four cows at once.

Never before has anyone been able to get the *power end* of the milking machine down to a point where it would be economical to operate in a small way.

Now—it has been done. The Empire Electric Milker is economical in original cost, economical to install, economical to operate.

It works with the time-tested Empire Units. You realize the importance of that.

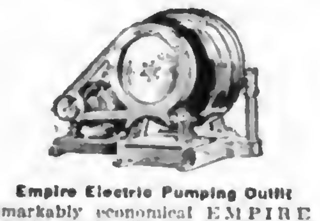
It works with the famous Empire Pulsator.

It uses the patented and exclusive Empire Teat Cups which imitate the natural sucking action of the calf.

It has all the Empire advantages listed at the left—advantages which set the Empire apart from all other milkers.

It does everything that an Empire Milker does on the biggest dairy farms in the country. And it does it so economically that no farmer who owns six or more cows can afford to be without it.

Write for the free Empire catalog No. 33. Read it. Then take it with you to the nearest Empire agent. He is ready to prove every statement we make.

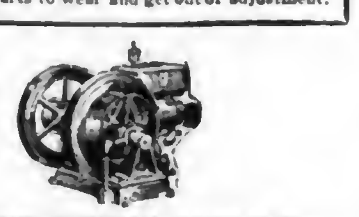


Empire Electric Pumping Outfit

The remarkably economical EMPIRE Electric Milker Pumping outfit. Type R-2 with ¼ h.p. electric motor operates 1 double unit milker. Type R-3 with ½ h.p. electric motor operates 2 double unit milkers.

Empire Advantages

1. Teat cup lining is hand made and has linen inserts. Basic Empire patents cover these teat cups—they give the only complete three-sided massage, duplicating the calf's suck.
2. Standard Empire Milker Units used with Empire Electric or Engine type Pumping Outfits provide a practical size for *every* dairy of 6 or more cows.
3. Single or double units to meet your requirements.
4. Durable rubber parts that stand boiling.
5. Single pipe line with no complicated or moving parts to wear and get out of order. Clean. Costs less.
6. The Simple Pulsator guaranteed 4 years against wear. Only one Pulsator needed for single or double unit.
7. Low power cost—¼ H. P. outfit milks 2 cows at once—larger sizes proportionately economical.
8. Sanitary claw with automatic shut off and without moving parts to wear and get out of adjustment.



Empire Engine Combination Pumping Outfit

For every farm not equipped with electricity there is an ideal Empire engine-operated milker pumping outfit—"A size for every dairy"—from the big Type J-Duplex outfit that operates eight double units at a time to the wonderfully economical Type R—Engine-Combination pump shown above. This outfit operates 2 double units; is provided with pulley so that engine may be used for all the light power jobs on the farm. Engine has ample surplus power to run separator or churn while milking.

Mr. Landis Tells the World

He is Satisfied That Bull Associations Pay

By S. J. BROWNELL

THIS is the story of what a purebred sire association has done for a Montgomery County, Pennsylvania, farmer. In 1919 forty-six farmers in the vicinity of East Greenville organized a seven-block Holstein bull association. Seven outstanding yearly record bulls were purchased, at an average of $1000 each, and one was placed in each of the seven blocks.

One of the members of this purebred sire association was William H. Landis, of East Greenville. After five years of membership in the organization Mr. Landis, to use his own words, "can tell the world that bull associations pay."

In 1921 twenty-six members of this association, including Mr. Landis, decided that they must free their herds from tuberculous animals before they could continue on a definite program of improvement. Twenty of the members refused to test and were, therefore, disqualified to have the services of the association bulls.

A 570 Per Cent Increase in Purebreds

The test gave the association's program a setback of two years, for the percentage of reactors was high, but events have proven the wisdom of this move for disease-free herds.

Since the testing of the herds a steady breeding program has been carried out which showed a 310 per-cent increase in purebreds in the herds of the twenty-six active members up to the year of 1923. Inventory of the herds taken at the close of the present year of organization shows the increase in purebreds in the herds of the active members to be 570 per cent. In other words they have practically five and three-fourths times as many purebreds as they had at the time of organization.

Realizing that he had developed some high-class stock thru the use of these outstanding purebred sires, Mr. Landis started on the fair circuit in 1924 with three of the daughters of one of the association bulls.

Daughters Win at Fairs

At the Allentown fair where they were first shown, the judge announced it was a very hard proposition to place the three because of their similarity, and they all got into the money class. They also won first place in the get-of-sire class.

At the Quakertown Fair in Bucks County they won second over all breeds in the get-of-sire class, and one was placed first by a different judge.

At Doylestown, in Bucks County, the third heifer, which had not as yet received a blue ribbon individually, was placed first, and again the three won second over all breeds for get-of-sires. This gave the three heifers each a first place decision at the three fairs where three different judges made the decision.

These conditions are no reflection upon the ability of the judges in placing the animals, but are brought out to emphasize the uniformity of type and similarity of conformation.

Prove Worth at Milk Pail

The three heifers, whose picture is shown herewith, were again shown in the get-of-sire class at the Tri-State Fair, Trenton, New Jersey, in a class of ten competing herds. At this fair they placed fourth. They were somewhat handicapped due to the fact that they freshened during their stay there.

In October one of these three heifers was first in production in the Montgomery County Cow Testing Association for all breeds and all ages, with a production of 1251 pounds of milk and 77.69 pounds of butterfat. Another was second in the association the same month, with 1112 pounds milk and 66.72 pounds of butterfat. This record is all the more remarkable because these animals are but two years old. The following month all three of the animals were placed with the ten highest cows in the association.

Mr. Landis's three ribbon-winning record-making heifers.

Made High State Record

The heifer which was first in October was again first in November and was third high cow for all breeds and all ages in the whole state of Pennsylvania, with a production of 1875 pounds of milk and 84.11 pounds of butterfat. This is a phenomenal record when it is considered that the competition was with twenty-six associations consisting of 8500 cows, and the record was made by a two-year-old.

Mr. Landis has sold two of the daughters of the association bulls to buyers from out of the county at a price of $500 each. Other buyers are now interested in obtaining some of the same blood. Without a doubt the association bulls have increased the value of the herds, thru their daughters, very materially, for the members of the association now own 141 daughters of these bulls. It is readily seen that the members have greatly increased the inventory value of their herds.

Mr. Landis, like other members of the organization who realized the necessity of keeping records of their herds, helped form a cow testing association for this purpose. This group was organized last July and is showing some very creditable results; in fact, the measure of progress of the bull association is due mainly to the records obtained in the cow testing association.

Not one buyer in a hundred who sees and tries a De Laval in comparison with any other, ever fails to choose the De Laval.

$6.60 to $14.30 Down
Balance in 15 Easy Monthly Payments
Trade allowance on old cream separators

See and try an improved De Laval side-by-side with any other cream separator you may be thinking of buying. Your De Laval Agent will gladly arrange a demonstration and trial for you.

If you then choose the other machine you will know what you are doing; but the chances are a hundred to one that you will not, and you will know why you do not.

We can make no claims of De Laval superiority which seeing and trying the machine itself will not more than substantiate.

A cream separator is the most important farm equipment investment any cow owner ever makes. You can't afford to make a mistake, or at least to do it unknowingly.

Wasting Plant Food

(Continued from page 17)

Some of the experiment stations on the Continent of Europe have advised farmers to mix fresh manure with well-rotted manure, alternating a layer of fresh manure and a layer of well-rotted manure, and, when the heap is completed, to keep it compact and moist. The mixing of well-rotted manure with fresh manure seems to favor a more rapid and efficient decomposition of the fresh manure with but slight loss of ammonia.

Chemicals to Hold the Ammonia

For the conservation of ammonia in manure it has been suggested further that the addition of chemicals or other products that would hold on to the ammonia more or less tenaciously would be desirable. Among the products that have been used more or less extensively, mention may be made of land plaster, kainit, ground phosphate rock and acid phosphate.

The use of acid phosphate or ground phosphate rock is being recommended by our experiment stations and our colleges of agriculture because of the fact that manure in itself is not a balanced fertilizer and that the addition of materials containing phosphorus improves its character for crop production.

Where acid phosphate is used the escape of ammonia is, no doubt, partly prevented. This is true also of land plaster. Nevertheless, the use of land plaster or acid phosphate, while it may help to reduce the loss of ammonia, will not serve to prevent the escape of a large part of it.

Georgia Experiments with Sulphur

The writer proposed some time ago that sulphur might be a helpful means for conserving ammonia in manure. This suggestion was based on the thought that sulphur is changed by certain bacteria into sulphuric acid, which, on its part, has a great affinity for ammonia. Hence, by adding a certain quantity of sulphur to manure, the conservation of ammonia might become feasible at a very reasonable cost.

Evidently this same thought has guided the Georgia Experiment Station in undertaking experiments for the purpose of determining whether sulphur added to manure would help to stop the escape of ammonia. In Press Bulletin No. 189, entitled "Sulphur to Stop Nitrogen Waste," the Georgia Experiment Station describes some interesting experiments.

What the Experiments Showed

A compost mixture was made up in these experiments consisting of six parts of Florida soft phosphate, three parts dried soil, two parts cottonseed meal, and one part dried stable manure. This mixture, when kept moist in jars, lost in a period of seven months about sixty percent of the nitrogen. This loss was not due to leaching, for the mixtures were kept under cover in tight receptacles. It must have been due, therefore, to the escape of the ammonia.

When a similar mixture had added to it two pounds of ordinary flowers of sulphur for each 100 pounds of the dried compost mixture there was no loss of nitrogen. In fact, the proportion of nitrogen in ammonia form increased in the mixture from 0.065 per cent to 0.767 per cent. The sulphur, changing into sulphuric acid, had evidently combined with the ammonia and held it in the mixture in the form of sulphate of ammonia. The loss of nitrogen was thus prevented.

The investigations in question are still being continued at the Georgia Experiment Station.

BARNYARD GOLF RULES

Official Rules and Regulations for Horseshoe Pitchers

QUESTIONS are frequently raised as to the rules governing the good old game of quoits (horseshoes). The official rules of the National Horseshoe Pitchers' Association say the regulation distance between the stakes shall be forty feet for men, and thirty feet for women, measuring where the stake enters the ground. To those accustomed to pace off any convenient distance as in the old days this makes quoits a real man's game.

The rules also specify that the stakes shall be of iron, one inch in diameter, perpendicular, inclined one inch toward the opposing stake and extending eight inches above the ground. This also means that real skill is required, also real muscle to throw a "ringer."

The Pitcher's Box

The pitcher's box shall extend three feet on each side to the rear and front of the stake and the pitcher may stand anywhere inside the box. A standard regulation game consists of fifty points, and the contestant first scoring this number after all shoes have been pitched shall be declared the winner.

Pitching rules specify that no contestant shall walk across to the opposite stake and examine the position of his opponent's shoes before making his last or final pitch. All contestants shall pitch both shoes from the pitching box into the opposing pitching box or forfeit the value of one point to his opponent.

Any shoe to be scored as a ringer shall encircle the stake far enough to permit a straight edge to touch both heel caulks and clear the stake.

A foul line shall be established three feet in front of the stake, and any contestant stepping over the foul line in delivering his shoe shall lose the value of his pitch, and no score shall be accredited to him.

In Case of a Tie

A shoe that does not remain within six inches of the stake shall not be entitled to score. (This does not apply to informal pitching or where players decide upon some other distance).

All equals shall be counted as ties, and the next closest shoe shall score. In case all four shoes be tied in distance from stake, or four ringers, no score shall be recorded and the contestant who pitched last shall lead off.

A ringer scores three points. A ringer and a closest shoe shall score four points. A double ringer shall score six points and is the highest score a contestant can make. In case of each contestant having a ringer the next closest shoe shall score, and all such ringers shall be counted as ringers pitched, but not counted as a score.

If each contestant has two ringers all are cancelled and no point is scored. If one contestant has two ringers and the other a single ringer, the pitcher having the double ringer shall score three points only.

Any shoe leaning against the stake shall have no advantage over a shoe lying on the ground and against the stake. All such shoes are tied. If a contestant has a shoe leaning against the stake it shall count only as a closest shoe.

Size of Horseshoes

No shoe shall exceed seven and one-half inches in length, seven inches in width or two and one-half pounds in weight. No toe or heel caulk shall measure over three-quarters inch in length. Opening between the caulks shall not exceed three and one-half inches. No horseshoe constructed in freak design will be considered regulation. All measurements shall be made by use of callipers and straight edge. There shall be no coaching or interference except in four-handed games. Partners have the right to coach each other. At the beginning of a second game the loser of the first game shall have first pitch. All teams are to be shifted to opposing box at the end of each game.—M. G. F.

Would Pay to Borrow

A DEALER in South Jersey is quoting a fertilizer of 4-8-7 analysis at $39 a ton payable September 1. This dealer sells the same fertilizer for $36 a ton if paid for on March 1. This means that the farmer who settles on September 1 is paying interest at the rate of 15½ per cent a year. Would it pay him to borrow the money from his bank at 6 per cent?—H. R. Cox.

Keystone Wool Scores

PENNSYLVANIA wool triumphed at the recent Tri-State Wool Show in Wheeling, West Virginia. The grand championship cup was won by a purebred ram fleece shown by J. W. Stewart, Jefferson, Pa. This same fleece also won the grand championship at the recent State Farm Products Show in Harrisburg.

Keystone growers showed fully seventy-five per cent of the fleeces on exhibition, according to W. B. Connell, sheep and wool extension specialist of the Pennsylvania State College, who was one of the judges. Space was not available for many more Keystone fleeces which had been shown at Harrisburg.

The wool on exhibition sold for seventy cents a pound to Horkheimer Brothers, of Wheeling. Louis Horkheimer is well known thruout the Tri-State region as sales agent of the Ohio Sheep and Wool Growers' Association. W. B. Connell was auctioneer of the wool sale.

Hogs in the Movies

A NEW hog film, entitled "Hog Breeds and Hog Management" is available for circulation from the United States Department of Agriculture. It will be circulated thru the film distribution system of the Department of Agriculture and the co-operating state institutions. Copies may be borrowed for short periods, the only cost being the payment of transportation charges both ways.

A complete list of the Department of Agriculture's 182 films, with information on the method of distribution is contained in Miscellaneous Circular 27, which may be obtained on application to the Department at Washington, D. C.

Fewer Stallions Licensed

OWNERS of stallions and jacks who stand them for public service in the state are required to procure a license from the Bureau of Animal Industry, Pennsylvania Department of Agriculture. The licenses issued in 1924 were not valid after January 1, 1925, and therefore, the licenses should be renewed immediately in order to meet the provisions of the law. A total of 271 licenses were issued in 1924 as compared with 357 in 1923 and 408 in 1922. So far this year the applications for licenses have come in even slower than a year ago.

About everybody who could would spend most of his time in the open air if it only cost something.

Now Only $5.69 Puts A Witte On Your Place

Thousands Accept Liberal Offer On This Famous Throttling Governor Engine.

Thousands of farmers, appreciating the need for cheap dependable power on the place, have accepted the liberal offer of Ed. H. Wittte, world-famous engine manufacturer. Mr. Witte makes the startling offer to put the standard Witte Throttling-Governor Engine to work for you for as low as $5.69 down.

The famous Witte Throttling-Governor Engine, known all over the world, comes fully equipped on this offer. Has celebrated water-proof WICO Magneto and forty other improvements, including a new device that makes starting easy at 40 degrees below zero.

The Rugged Dependable Witte.

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that the women folks can operate it. Easily moved from job to job. More than 150,000 WITTES are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

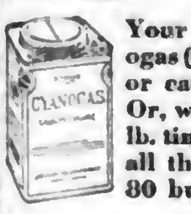
Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a postcard will do, to the Witte Engine Works, 2043 Witte Bldg., Kansas City, Mo., or 2043 Empire Bldg., Pittsburgh, Pa., and receive this interesting and valuable book that gives you valuable information about the application of engine power on the farm.

Wood Chucks Are Expensive

They cost you real money in the crops they destroy. They are an expense, and an unnecessary one. Woodchucks, rats and other destructive rodents can be effectively and economically exterminated with

CYANOGAS
(REG. U. S. PAT. OFF.)
CALCIUM CYANIDE

Simply place a heaping tablespoonful of Cyanogas (Calcium Cyanide) in the mouth of each burrow. The moisture in the air liberates a powerful poison gas which reaches the animals and kills them.



Your dealer has Cyanogas (Calcium Cyanide) or can get it for you. Or, we will deliver a 5 lb. tin sufficient to kill all the woodchucks in 80 burrows for $2.50.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth and Friends:—May I join your happy circle? I live on a farm not far from a village called Arcola. I go to the Arcola School. I have been reading the letters for some time on the Y. P. F. page and the children said that there was a deep snow. We have not got any. Some of the people are plowing.

I am twelve years of age. I have two brothers and one sister. I will send some riddles some of these days. Wishing all good luck.—Alice Marshall, Loudoun County, Va.

Dear Y. P. F.:—May I join your merry page by sending my letter? I enjoy reading the letters every week.

I live on a dairy farm near Erie, Pa. I have one sister and two brothers. I am ten years old and am in the fifth grade at school. We have a fine teacher. Our school is near our home.

My sister and I take piano lessons in summer, and our work is outlined for the winter. We try to practice an hour each day.

We go to Sunday school nearly every Sunday in the summer and as much as possible in winter. Aside from helping in the house, I feed the hens and gather the eggs. We have about fifty hens and usually raise about 200 little chicks. We are raising two calves and have had lots of fun with them. We had a good deal of snow this winter and had good times sledding down hill.

This is a fine spring day and it makes us think of summer and the flowers.—Margaret Osborn, Erie County, Pa.

Dear Cousin Ruth:—May I join your happy circle? We have taken Pennsylvania Farmer for four years. I like to read the Forum page very much. I am thirteen years old and have three sisters and one brother, a niece and a nephew.

I live on a farm. We have cows, pigs and chickens. For pets I have two dogs and one cat. I have a half mile to go to school. We have thirty-five scholars in our school. We have lots of fun playing games.

With good wishes and good luck to every one.—Anna Katharine Holtzer, Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—I have not seen a letter from Madison County so I thought I would write a letter. I am fourteen years old and in the eighth grade. I belong to the girl scouts of Morrisville. I have a brother and one sister.

HER LITTLE COUSINS
Frances Choate, Madison County, N. Y.

We have a horse who is very gentle and I drive her quite a lot. I am sorry to say my brother has a broken collarbone at this time. We have cows and hens.

I am enclosing a picture of my two little cousins. This is wishing you all good luck and hoping that you will let me join your circle.—Frances Choate, Madison County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been enjoying your letters ever since I could read English.

I came to America three years ago. Father has been in this country for ten years. Mother and I started for America before the World War but did not succeed in getting here.

We had a terrible time during the war in Hungary. The front was only about 100 miles from our town. After the war the Bolsheviks captured us. After three weeks they were forced to leave the country. Then after the Bolsheviks went, the Rumanians took possession of Hungary.

I would like to tell you all I went thru but it would be such a long story.

I am in the eighth grade. I got two brothers. I will write again soon and send you some pictures.—Irene Zimmerman, Burlington County, N. J.

Dear Forum Friends and Cousin Ruth:—I am twelve years old and live on a farm of about sixty acres. I go to Bell Air High School. There are over 500 pupils in the high and grammar school. There are forty-two pupils in the seventh grade; which I am in. I have to go three miles to school.

I have two little cats, Blackie and Tabby. They are cute.

How many have heard, or belong to, the boys' and girls' Four H. Club. I do. I like it fine. Love to write again.—Mattie L. Kirby, Harford County, Md.

Dear Cousin Ruth and Forum Friends:—As I have not seen any letters in your Forum page from Silver Run, Md., I will send you one. It won't be a very large one for the first one, maybe the next time I can do better. I am nine years old and go to Green Valley School. I am in the third grade. We live on a farm and keep two horses and three cows and hogs and chickens. I like to help mother milk. I like to ride the horses. I have a pet cat; she is very nice. I have one brother who is younger than me. I hope to hear from some others from Carroll County, Md.—Edgar J. Myers, Carroll County, Md.

Dear Cousin Ruth:—I have been reading "Our Young People's Forum" for a long time but have never gotten right down to writing to you.

I am eleven years old and am in the sixth grade. We take our final examinations in May. School closes on May 25th and then we are going to have a picnic.

On our farm we have dogs, cats and cows, but my father is a butcher and we kill the cows. We have two horses named Cap and Bob. Would you mind telling me if I could join?—Helen Faust, Yerkes, Pa.

Dear Cousin Ruth and Forum Friends:—We have been taking Pennsylvania Farmer for about two years and as soon as we receive it I turn to the Forum page. I sure do enjoy reading the letters from the boys and girls.

I live on a farm and go to the Pedricktown public school. I like my teacher and school friends. Father went to [illegible] this winter and has not come home yet but is on the way.

Cousin Ruth I was very sorry to hear you were sick. I am ten years old and am in the sixth grade. I walk to school but I think I would rather walk than ride. I am going to ask you a question before I close and it is: Do I have to send a drawing or a picture to become a member of the Young People's Forum. I would thank you very much if you told me.—Anna Gaventa, Salem County, N. J.

Dear Cousin Ruth and Forum Friends:—Wouldn't you like a new member? This is my first letter. I am a girl thirteen years old and am in the eighth grade. I go to South Presten School. My teacher is a good teacher and I like her. I have four schoolmates about my size and age.

I am very sorry you have been sick and hope you get well soon. I never like to have anyone sick.

I have read the Y. P. F. for many years and enjoy it the best of any page in Pennsylvania Farmer. I hope you enjoy my letter for this is the first time I have written.

For pets I have banties, a dog, cats and a horse that comes to our house every day for apples. His name is Tony. The name of my pet cat is Tidily-winks. He is gray and white. The name of our dog is Watch, and all the banties have names, too. I have two brothers.

Mamma said perhaps you like short letters better than long ones.—Dorothy C. Hoag, Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—This is my first letter to the Forum. I am eleven years old and live on a farm. We have cows, horses and chickens. I milk three cows and my mother milks three.

PLAYING MOTHER
Gladys H. Rettinger, Dauphin County, Pa.

I have a good teacher and she is very kind to us. I have two sisters that are married and a brother. We have three cats and a puppy.

I am sending my picture to you, with love to Cousin Ruth.—Gla
H. Rettinger, Dauphin County,

Answers to Eleanor Wasson's Riddles:

1. Mother.
2. Noise.
3. When he eats a pear (pair).

Last week the name of one of
Forum friends was omitted from
end of his letter. The last sente
should have read, "This is my
letter, I will write again soon.
Billie Ambacher, Camden County,
J." We hope Billie will keep
promise.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—If you begin at the right spot and go right along, without skipping any letters you will find that this strange looking puzzle will form the words of a saying well known to you all. You may not hit on the right place to begin the first time you try. You remember about finding the thing in the last place you looked for it? Maybe something like that will happen with this puzzle. When you have found the familiar saying, send it to me on a POSTAL CARD not later than March 28. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVA FARMER, 261 SOUTH STREET, PHILADELPHIA.

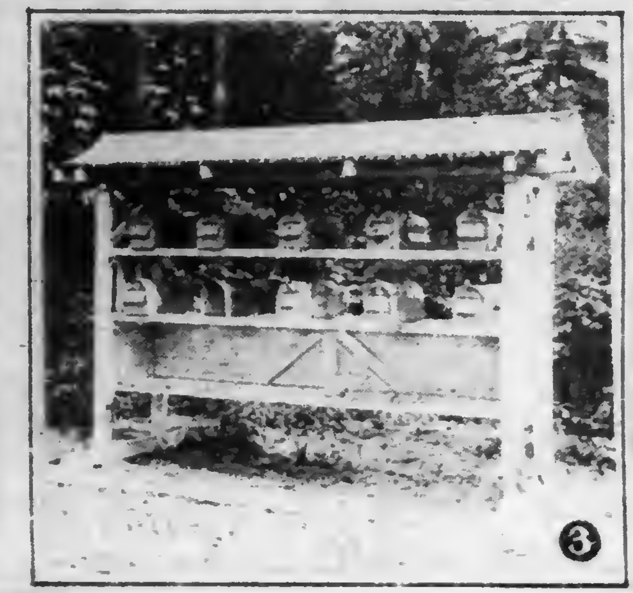
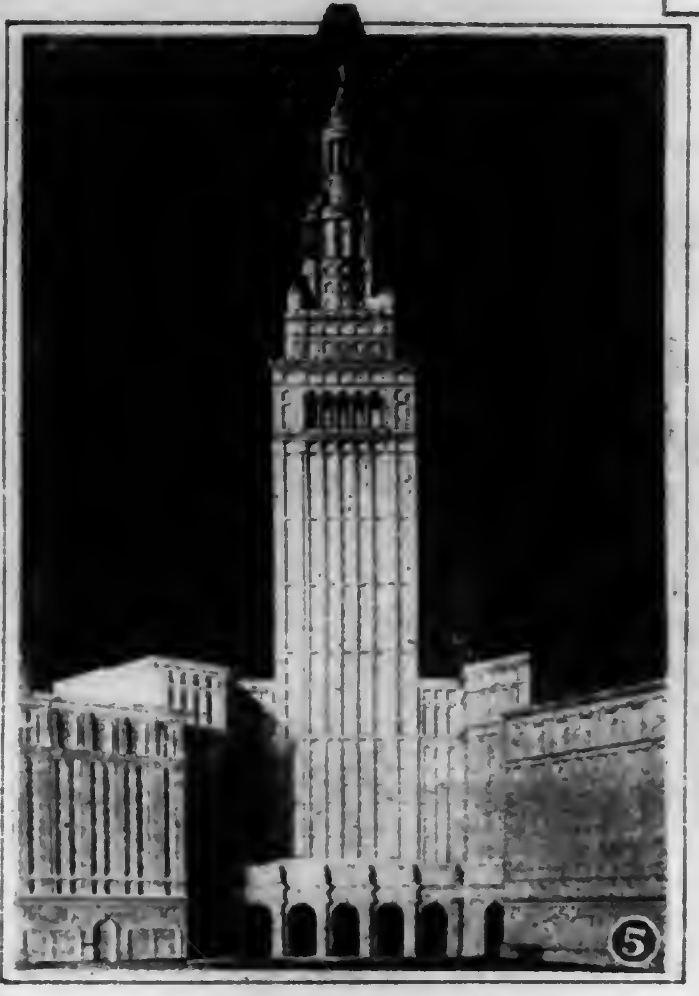
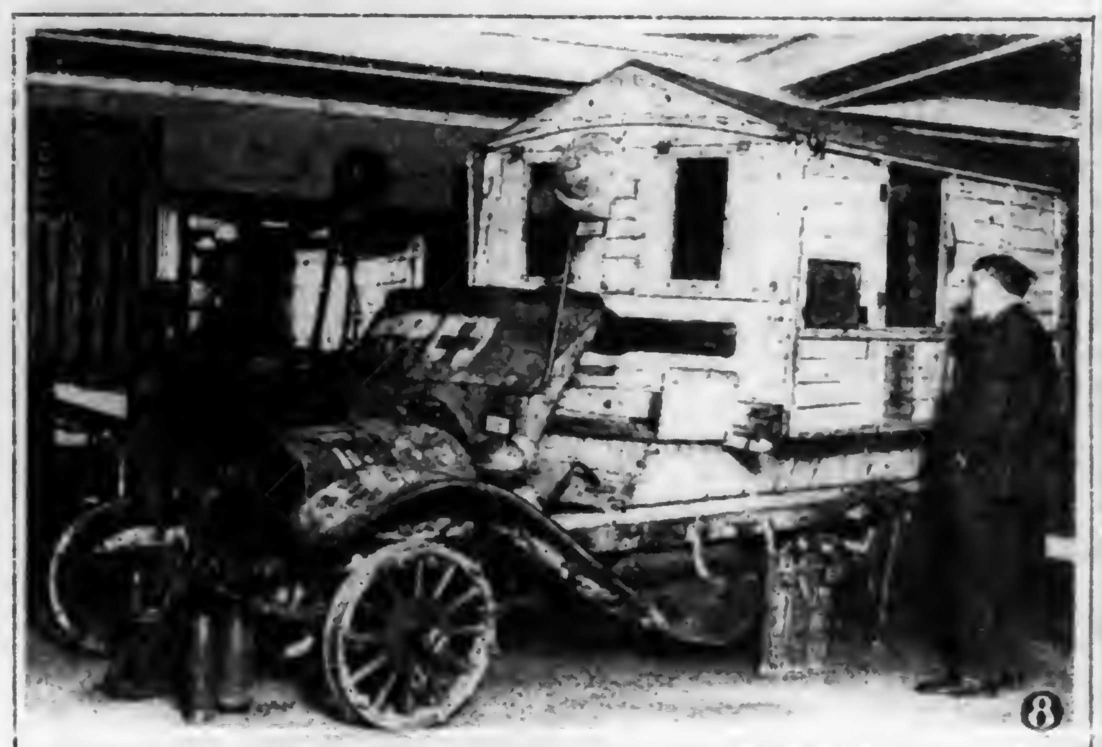
PASSING EVENTS IN PICTURES







(Copyright by Underwood & Underwood)

1.—Mrs. Charles E. Hughes, who will be missed from Washington official life, now that her husband is no longer in the Cabinet.
2.—Huge stacks of cork, as it comes from the trees, and a pile baled for shipment from Almorania, Spain.
3.—An apartment mail box, which is certainly more sightly than the usual haphazard placing of rural boxes. It took an enterprizing citizen of the State of Washington to get this improvement under way, and his neighbors did their share.
4.—A pet crow, with his owner—he speaks only Italian, but much of that.
5.—A model of the new Union Terminal to be built in Cleveland, Ohio.
6.—The heir to the throne of Roumania learning the "moves of the game" at a chessboard. His grandfather is now king.
7.—On the eve of his retirement, the oldest member of Congress, General I. R. Sherwood, gives the youngest, C. J. McLeod, a few kindly words of advice.
8.—A relic of the World War—this Red Cross ambulance saw service from 1914 to 1918, and valiant service, too, as it wears a Croix de Guerre and three stars.

Mrs. IDA S. HARRINGTON

Our Weaving Goes Merrily On

This Week We Undertake a Sewing Basket

IN MAKING a sewing basket the materials needed will be:

8 long strands No. 3 round reed.

5 long strands No. 2 round reed.

A nut pick.

A pail of tepid water.

A tape measure.

A knife, shears, or razor blade.

Cut the foundation pieces as follows:

16 pieces of No. 3 reed, 30 inches long.

32 pieces of No. 3 reed, 14 inches long.

Roll the 5 strands of No. 2 (the weavers) into little coils which fit in your water pail, and soak these and your cut pieces of reed thoroly. When they are perfectly pliable, start the basket base by arranging the 16 thirty-inch pieces in groups of four, as in Figure I.

Start with the Weavers

Now weave for two rounds, using one of your long weavers. Start the end of the weaver under D, weaving toward the left, over A, under C, over D, under B, over C, under A, over B. That is one round. Weave a second round in the same way, then start the third row of weaving by separating the spoke groups, A, B, C, D, into groups of two instead of four.

Use your nut pick to help push the weaver up close to the preceding round if necessary. Weave just one row over the spokes in groups of two. The spoke where we first started weaving (D group) is called the initial spoke. Now that each group is divided, let us call the second half of the D group (or D 2) the initial spoke.

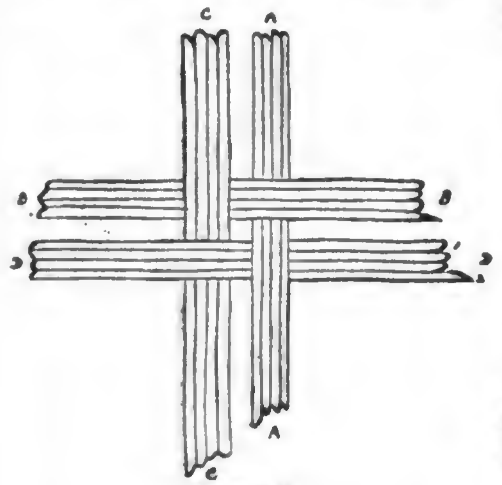

Figure I.

With an Even Number of Spokes

Because an even number of spokes makes different weaving (See Lesson 1) we now introduce a second long No. 2 weaver. Place the end of this under the first spoke group to the left of D1, and weave one round.

You will notice that this second weaver passes under the spokes which the first weaver passed over. Continue weaving in this way with the two weavers kept separate, and the first weaver always ahead of the second, to avoid crossing.

When your base is five inches in diameter, soak it again. Now to the right of each spoke (widening the opening with your nut pick) insert the 32 extra spokes, 14 inches long. Push each spoke in for about one inch. Then continue weaving, over 4, under 4, until the base measures six inches across. Gather the spokes into a group and tie them together at the end, while you give your work another good soaking.

Shape the Spokes Upward

When you start weaving again, keep shaping the spokes upward by holding them firmly with your left hand as you draw your weaver tight with the right. Set your base flat on a table and weave on the outside of the basket.

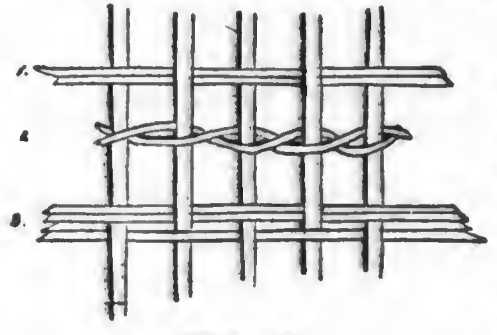

Figure II

When your basket is one inch tall, separate the spokes into groups of two again, and change your weave to "pairing." This also requires two weavers, so continue using the same two, but let them cross each other, the left one passing in front of one set of spokes, back of the next, and out, when the other weaver (now on the left) repeats—in front of one set of spokes, back of the next and out. (See Figure II).

Two Weavers Instead of One

After one and one-half inches of pairing make a one-inch border of double under and over. (Figure II). This is the simple weave described in the first lesson, only you use two weavers like one. Then weave two inches more of pairing, drawing the spokes together so that the shape of the basket rolls in.

Soak thoroly once more, and finish with this border: Pass one pair of spokes under the next two pairs to the right, over the next pair, under the next, and in, rolling the entire border inward. Clip all ends about one inch from the spoke that holds them.

Finish this basket with a coat of clear, thin shellac. Refer to Lesson I for directions on joining weavers.—G. S. S.

Early Tomato Plants

TOMATO plants are easy to raise. For a number of years I have raised my own, and find that I get far better results than when I bought them.

It is quite a little work, but work that I enjoy. They grow so fast that it is interesting to watch them. If the seeds are soaked in warm water for a few hours before they are sown, they will sprout more quickly. Have the earth warm when sowing and keep in a warm place. They do not need sunlight until the plants come up. I keep them on a shelf near the fire or on the incubator top if I am using the incubator.

When the Plants Have Come Up

After the plants begin to come thru the ground they must have sunlight. I like to use part woods dirt and part rich dirt from the barnyard. Having good earth for them is half the battle. I put the earth in the oven and let it get hot, but do not let it stay in the oven and bake, as that spoils it.

When there are four leaves, transplant to four or six inches apart. They may be set into separate dishes at this time or put into pots, when they are again transplanted. I sow my seed on St. Patrick's Day. I have raised plants that were blossomed when set in the garden, and which gave us ripe tomatoes in the middle of July.

This is a good way to make a little pin money, as there is always a demand for healthy home-grown plants.—Mrs. E. M. C.

Another Reader Seeks Advice

She, Too, Would Improve the Plan of Her Kitchen

Dear Pennsylvania Farmer:—We get your good paper every week. Others have asked you to help plan their rooms. Here I come too. My kitchen is twelve by twenty feet. Is it too large? I have a dining room. Hope you will understand my rough plan, and help me if there is a better way to arrange it.—Mrs. C. D. L., Penna.

The kitchen is much too large; a great deal of energy and effort is wasted, in walking from one piece of equipment to another.

I notice that there is a sewing machine in the kitchen. Therefore, the housewife would probably appreciate a convenient little sewing room near at hand, where she could keep her sewing all spread out, and not have to gather it up every time she leaves it.

This Is What to Do

So, here are my suggestions:

1. Divide the old kitchen into kitchen and sewing room by a partition of tongued-and-grooved boards. The exact position of this partition will depend on just where the window comes.

2. Move the cabinet into the new kitchen. Make a place for the oil stove by shifting the range a little.

3. Build a new cupboard in the new kitchen, against the new partition.

4. Put a glass door in the new partition; cut a new window in kitchen; perhaps replace the door to porch with a glass door.

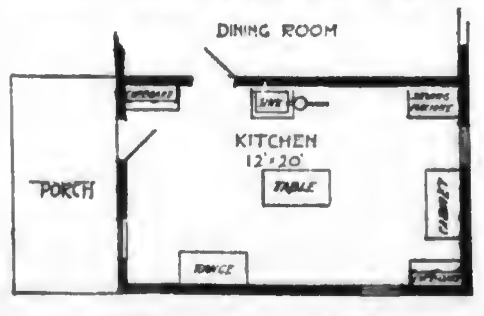
5. Put shelves across the end of sewing room, covered by a curtain.

6. Put a water closet or chemical toilet, shut off by a curtain, in the sewing room, where I have marked it on plan. This feature will, I believe, be a very great comfort and convenience to the housewife.

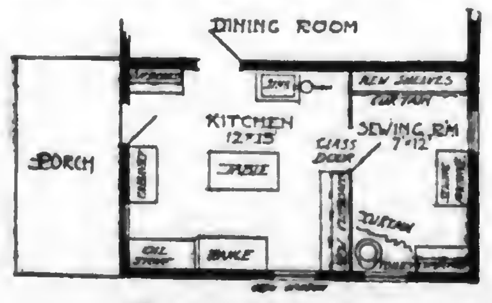
7. The sink is not in the best place, but since it and the pump are all set, the expense of changing would probably be quite high.

8. The old cupboard should remain in the new sewing room; it will be extremely handy to hold sewing materials, etc. Moreover, it helps to screen the toilet.

If these changes seem too expensive, something much simpler may be done. A denim curtain may be put up, instead of the partition; all the other new work being left until later, and done by degrees.—W. D. B.



The present plan.



The improvements

"Leave Out Electricity"

DEAR EDITOR:—I think it would be better to give thoro discussion to the training of children, and not so much to this electric equipment stuff. Every farmer has children that ought to be well trained, while 90 out of every 100 cannot afford an electric equipment, and some not even lights. In the eyes of many readers, the electric fuss in a recent issue was wasting precious space in your good paper.—Mrs. F. N. R.

Editors' Note:—The aim of the "electric fuss" is that ninety per cent of the farmers may have electric power as well as children.

For Richer, for Poorer

A MAN came home one day and said to his wife, "We have lost everything; everything is in the sheriff's hands and will be sold!"

The wife, looking up, said, "Will he sell you, too?"

"No."

"Will he sell me?"

"No, no."

"Then we still have health and two hands each. We will start anew together!"—J. W. L.

"Tommy, stop eating with your fingers."

"But, mamma, weren't fingers made before forks?"

"Not yours, Tommy."—American Legion Weekly.

"Politicians used to cater to the plain people."

"Well?"

"But now we must consider the good-looking vote."—Louisville Courier-Journal.

---

o Need to Worry about Them

r Girls Are Learning to Be Good Housewives

FEW weeks ago we were having an institute in a fine, modern school building in Southern Ohio. g the morning session I slipped from the meeting long enough lt the home economics class.

re are six girls in that home nics class, all from farm homes. embers of the class, under the vision of the teacher, are serv- afeteria lunches at noon to the l children. They serve five- soup, three-cent cocoa, a five- baked dish, and five-cent sand- s.

A Division of Labor

girl was general manager of afeteria for one week and each as given definite work to do for day.

t as I entered the class room irls were taking stock of sup- The general manager was mak- ut the list of supplies to be . Quantities and prices were n down. Some things had to minated, because they could not l them, others because they l take too long to prepare.

girls had some marshmallows rom a party that week, and in ng how they might use them to advantage, I learned a way new e, anyway, for preparing baked h. I also learned that the best to cut marshmallows was with d scissors.

woman is hired each day to come to the kitchen from ten o'clock until three. She helps in the preparation of the vegetables and in washing the dishes. She is paid from the profits made in the lunch room.

Profit Goes toward Equipment

So far this year the girls have been able to make enough profit to buy some much-needed equipment that the board was unable to purchase for them.

The girls were serving lunches to around eighty each day. All this was a part of regular school work in home economics.

I fancy when those girls are in their own homes they will plan and serve properly balanced meals to their families, easily and quickly and will not become slaves to the getting of meals.

When Son Comes to Marry

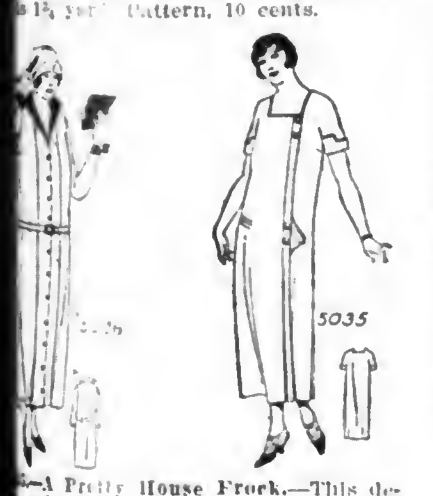
If my son were at the age to be looking up a girl—well, I should either send him down to that town, or I should invite some of those girls to my home—to visit me.

Yes, I am quite sure those girls when they get into their own homes will budget, because they are being trained in school not only to budget their money, but also their time. And I think one thing that definitely impressed me that morning was that the girls were planning first to use the food supplies on hand.—M. H. M.

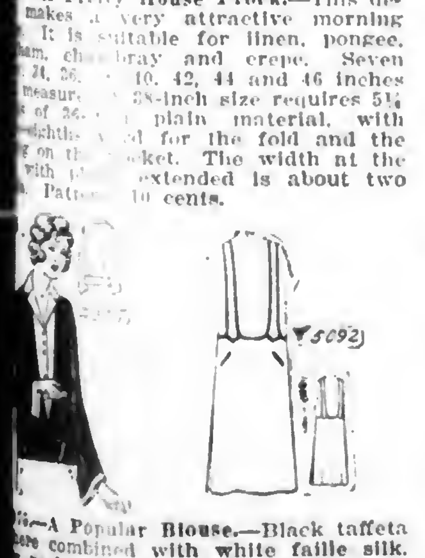
When Spring Is in the Air

irections for Ordering.—Give figures letters of each pattern exactly as ted at beginning of each description. bust measure when ordering waist rns, waist measure for skirt, and for children's patterns. Address nsylvania Farmer, 261 S. Third et, Philadelphia, Pa.

—A Good Style.—Kasha, broad- taffeta or crepe could be used for model. Nine sizes: 40, 42, 44, 46, 48, 54 and inches bust measure. A h size will require 5½ yards of one ial 40 inches wide. For facing on cuffs and revers portions of the three-eighths yard will be re- d. The width of the dress at the is 1¾ yard. Pattern, 10 cents.



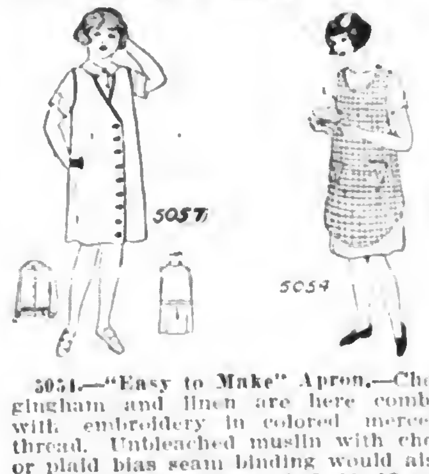
—A Pretty House Frock.—This de- makes a very attractive morning It is suitable for linen, pongee, ham, chambray and crepe. Seven 34, 36, 40, 42, 44 and 46 inches measure. 38-inch size requires 5¼ of 36 plain material, with eighths yard for the fold and the on the pocket. The width at the with plaits extended is about two . Pattern, 10 cents.



—A Popular Blouse.—Black taffeta are combined with white faille silk. model is also pretty in crepe or de chine. The collar may be rolled high or turned back together with the fronts, as shown in the large view. Six sizes, 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires three yards of one material 32 inches wide. If made as illustrated it will require 2⅝ yards of one material and five-eighths yard of contrasting material 32 inches wide for vest, collar and facings on the sleeve. Pattern, 10 cents.

5092.—A New and Popular Skirt Model.—This style is youthful and attractive, and will look well with some of the new spring blouses and "shirts." Charmeen, flannel, kasha, or linen could be used to make a skirt like this. It is also excellent for sports silks. Seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure, with corresponding hip measure 35, 37, 39, 41, 43, 45 and 47 inches. The width at the foot with plaits extended is 1⅞ yard. To make this model for a 29-inch size requires 2½ yards of 40-inch material. Pattern, 10 cents.

5057.—A Seasonable Style.—Linen, poplin, chambray or pongee could be used for the dress, and crepe, lawn, batiste or linen for the guimpe. The dress is sleeveless. The sleeve of the guimpe may be short as in the large view or in wrist length as shown in the small guimpe view. Four sizes: 6, 8, 10 and 12 years. To make the dress for a 10-year size in 36-inch material will require two yards. The guimpe will require 1¾ yard if made with long sleeves. With short sleeves 1⅝ yard is required. The belt of contrasting material requires one-eighth yard. Pattern, 10 cents.



5054.—"Easy to Make" Apron.—Checked gingham and linen are here combined, with embroidery in colored mercerized thread. Unbleached muslin with checked or plaid bias seam binding would also be attractive. Five sizes: 6, 8, 10, 12 and 14 years. If made of one material, a 10-year size requires 1⅛ yard of 36-inch material. Pockets of contrasting material require one-eighth yard cut crosswise. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

If in doubt use CALUMET
THE WORLD'S GREATEST BAKING POWDER
—the next time you bake give it just one honest and fair trial. One test in your own kitchen will prove to you that there is a big difference between Calumet and any other brand, that for uniform and wholesome bakings it has no equal.
If there were a more dependable leavener obtainable, millions of housewives, leading domestic science teachers, cooking experts, great railroads, big hotels and good bakers would not use Calumet in preference to the hundreds of other makes that are on the market.
Avoid the disappointments—the unnecessary expenses that come from using unknown brands of baking powder. Use Calumet and your pies, cakes, biscuits, muffins, everything you bake will be perfectly raised, easily digested and appetizing.
BEST BY TEST
Every ingredient used officially approved by U.S. food authorities

Choice of Color Is Importan

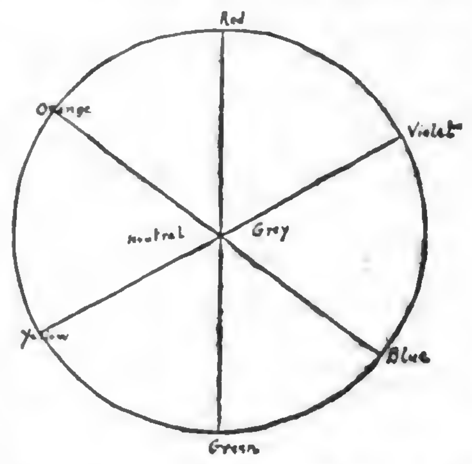
A Few Simple Rules to Guide the Home Maker

THE present-day housekeeper is learning the value of color in successful home decoration. She may possess an appreciation of color in a harmonious room without having a working knowledge of how to obtain like satisfactory results for herself.

For the benefit of housekeepers who did not enjoy the privilege of studying color harmony in school, a practical decorator has made these suggestions.

The Diagram Will Help You

Make a diagram like the illustration. Self-tone harmony means the use of two or more of the tones or shades of one primary color toward the next. For example, one may safely use various tones of color between and including orange and yellow and feel certain that they will harmonize satisfactorily.



Complementary harmony is obtained by going from one primary color down through neutral grey to the color at the opposite side of the circle.

For example, if we are doing a room in tones of yellow and wish introduce some color that will trast with and bring out our scheme, we may safely choose This little hint is of great help we are choosing the new curtains wall-paper for a room.

Color Applied to Large or Small

The amount and intensity of is also a stumbling block. Here our decorator friend has a not- forgotten rule. "Look at she suggests. "The larger the the less intense the color. One leaf may be intensely green, but forest-covered mountain takes on soft, neutral tone.

"In a room, use the bright for small objects such as a bowl, cushion or a book-binding. For large areas, such as walls, floor upholstery reserve the softer, shades."

Another rule it is wise to is that the walls should be in tone than the floor and the lighter than the side-walls.

Effect of Figured Material

Sometimes the question of to choose plain or figured seems a problem. Remember if floors, walls, draperies and stery are all plain, it gives a bare and uninviting While if all are figured the effect cluttered and fatiguing.

With these simple rules in mind, can be reasonably certain of ing satisfactory results in the of new furnishings.—G. L. S.

This Luxury Costs Nothing

IT WAS early in the winter and not exceedingly cold, but the woman next to me at the entertainment was in heavy garments, as all the rest of us were, and those garments fairly reeked with mingled odors of onions, grease, cabbage and others not easily identified because of the perfume she used. If you have ever sat in a warm room next to such a being you can imagine how the pleasure was marred for those nearby. Yet that woman was a good housekeeper, so called, and prided herself on her neatness and thrift.

She is one of those who feel very virtuous and saving when every crack in the house is stopped tightly the first day of November, and the stuffing is not pulled out until the first of May. Even the keyhole has a nice little plug in it and there is a sign on the front door inviting callers to come to the storm door at the side. Everything is as near air tight as possible.

Of course, she has her garments hung in a closet with the door shut and this she blissfully thinks keeps out the odors, but to make matters sure she puts on a quantity of perfume and sallies forth.

Easy to Heat Fresh Air

If fresh air cost good money we would find it more common, but because it can be had for nothing housekeepers strenuously keep it out. Contrary to common belief fresh air heats more readily than stale, so it is economy to air the house well daily. It is also pleasing to all cerned to air heavy wraps, and suits in the winter sunshine.

Aside from the fresh air in bedrooms at night the living should be supplied with this ing atmosphere every hour of the After meals put the children in warm room and air all the rest of house until any one coming in outdoors can not detect what you for dinner. Then collect the in one of the warmed, aired and complete the task by the air where they have been. whole thing need not take more twenty minutes.

To Ventilate the Living Room

A piece of board as wide as window put under the raised sash lows a constant inflow of fresh air the living room without a draft. course, in a howling winter leakage will take care of the fresh problem in spite of all the around the doors and Weather strips are excellent and even cloth stuffed along windows is a great help in comfortable, but don't shut all air out. Make sure that every ber of the family gets enough— the new baby.

The best smell is no smell, everybody who has occasion to go a crowded, overheated room in will agree. Therefore it is well take what can be had for nothing make life more healthful and pleas thru its use.—Hilda Richmond.

FACTS ABOUT STARCH

Not Necessarily Indigestible When Under-cooked

RAW or slightly cooked starch as an article of diet, according to recent authorities, is not indigestible, in spite of what we have always been taught.

"There seems to be no question that cooked starch is more readily absorbed. The next question is, is it more completely absorbed, and is complete absorption wholly desirable?" says Dorothy E. Lane of the University of South Dakota, writing in the Journal of the American Osteopathic Association for January.

Mrs. Lane sums up the results of a number of recent digestion experiments with raw and cooked starches. She shows that cooked starches were completely absorbed. So were separated raw starches, tho their absorption was slower. Starches surrounded by cellulose, however, were not so completely digested.

Two Types of Bacteria

The fact that starch in certain forms is more slowly absorbed, or even not completely digested, Mrs. Lane considers an advantage rather than a drawback. She shows that there are two chief types of bacteria in the human digestive tract. One produces beneficial lactic acid fermentation, and the other causes harmful putrefaction of the unabsorbed protein which has passed into the large intestine.

Mrs. Lane states that other investigators as well as herself, have found that starch surrounded by a certain amount of cellulose and thus escaping earlier complete digestion, reaches the large intestine and undergoes bacterial fermentation, producing lactic acid. This, she says, antagonizes the harmful putrefaction of the unabsorbed proteins, and thus greatly lessens the amount of putrefactive products entering the general circulation.

This writer also declares that the cooking of starchy foods destroys a large proportion of the vitamins, alters the organic mineral substances and in many cases induces flatulency.

She advises cooking oatmeal ten minutes, new corn five minutes and new young peas ten minutes, while bananas and apples are always to be eaten raw.—R. G. H.

Electric Toaster

PRODUCES evenly golden brown toast quickly. The heat is not so intense as to dry the bread. Toasts it right at the table. Toasts two slices at one time. Economical to operate.

To live, laugh, love one's friends and be loved by them is to bask in the real sunshine of life. Other things are incidental; these are important.

The best way out of a difficulty is thru it.—Elyria, Ohio.

Wall Paper as low as 3¢ a single roll

Wall Paper Sample Book MONTGOMERY WARD & CO.

Send for this new book—over 100 samples FREE

NOW you can afford to re-paper every room. A few dollars will re-paper several rooms! Look at your home. If there is a dingy, faded wall, write for Ward's free sample book of Wall Papers.

You can now buy papers at *one-half the prices you have known.* Here are low prices that are simply amazing. Think of good paper at 3 cents a single roll. Think of papering an entire room—10x12 feet, side walls and ceiling, all for as little as 82¢.

Over 100 Actual Samples in this book—free

Large sized samples of the newest, best patterns. Tapestries, fabrics, all-overs and stripes. Everything desirable in the latest designs.

Write for your free copy of this book of 100 actual samples. See how little it now costs to re-paper. You can hang the paper yourself. The Sample Book tells you how.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., discovered a process of making a new kind of paint without the use of oil. He named it Powdr-paint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much. Write to A. L. Rice, Inc., Manufacturers, 114 North St., Adams, N. Y., and a trial package will be mailed to you, also color card and full information showing you how you can save a good many dollars. Write today.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continuea

THAT last peril is one of the half-solved mysteries of my life. The following affidavit, secured by an assistant of the district attorney from a young physician in a village above Ballybeen, never a matter of record, heightened its interest for me and my friends.

"Deponent said that about eleven o'clock on the evening of the 24th of September (that on which the attack was made) a man unknown to him called at his office and alleged that a friend of the stranger had been injured and was in need of surgical aid. He further alleged that his friend was in trouble and being sought after and that he, the caller, dared not, therefore, reveal the place where his friend had taken refuge. He offered the deponent the sum of ten dollars to submit to the process of blindfolding and of being conducted to said place for the purpose of giving relief to the injured man. Whereupon the deponent declares that he submitted to said process and was conducted by wagon and trail to a bark shanty at some place in the woods unknown to him where the bandage was removed from his eyes. He declares further that he found there, a strong built, black-bearded man about thirty years of age, and a stranger to him, lying on a bed of boughs in the light of a fire and none other. This man was groaning in great pain from a wound made by some heavy weapon on the side of his head. The flesh of the cheek and ear were swollen and lacerated. Deponent further declares that he administered an opiate and dressed and put a number of stitches in the injured parts and bound them with a bandage soaked in liniment. Then deponent returned to his home, blindfolded as he had left it. He declares that the time consumed in the journey from the shanty to his home was one hour and ten minutes."

IT SHOULD be said that, in the theory of the district attorney the effort to retire the principal witness, if, indeed, that were the intention of their pursuit of me, originated in the minds of lawless and irresponsible men. I know that there are those who find a joy in creating mysteries and defeating the law, but let it be set down here that I have never concurred in the views of that able officer.

At the examination of Amos Grimshaw my knowledge was committed to the records and ceased to be a source of danger to me. Grimshaw came to the village that day. On my way o the court room I saw him walking slowly, with bent head as I had seen him before, followed by old Kate. She carried her staff in her left hand while the forefinger of her right was pointing him out. Silent as a ghost and as unheeded—one would say—she followed his steps.

I remember when I went on the stand my eyes filled with tears. Amos gave me an appealing look that went to my heart. It was hard for me to tell the truth that day—never has it been so hard. If I had had the riches of Grimshaw himself I would have given them to be relieved. Was there nothing that I could do for Amos?

I observed that old Kate sat on a front seat with her hand to her ear and Grimshaw beside his lawyer at a big table and that when she looked at him her lips moved in a strange unuttered whisper of her spirit. Her face filled with joy as one damning detail after another came out in the evidence.

AUNT DEEL and Uncle Peabody came to the village that day and sat in the court room. They had dinner with us at the schoolmaster's,but I had little chance to talk with them. Aunt Deel went up to my room with me and slyly gave me some fresh cookies wrapped in a piece of newspaper which she carried in a little basket bought from the Indians.

"Here's somethin' else," she said. "I was keepin' 'em for Christmas—ayes!—but it's so cold I guess ye better have 'em now—ayes!"

Then she gave me a pair of mittens with a red fringe around the wristbands, and two pairs of socks.

I remember that my uncle laughed at the jests of Mr. Hacket but said little and was not, I thought, in good spirits. They went home before the examination ended.

The facts hereinbefore alleged, and others, were proven, for the tracks fitted the shoes of Amos. The young man was held and presently indicted. The time of his trial was not determined.

I received much attention from young and old in the village after that, for I found soon that I had acquired a reputation for bravery, of the slender foundation of which the reader is well aware. I was invited to many parties, but had not much heart for them and went only to one at the home of Nettie Barrows. Sally was there. She came to me as if nothing had interrupted our friendship and asked if I would play Hunt the Squirrel with them. Of course I was glad to make this treaty of peace, which was sealed with many kisses as we played together in those lively games of the old time. I remember that I could think of nothing in this world with which to compare her beauty. I asked if I could walk home with her and she said that she was engaged, and while she was as amiable as ever I came to know that night that a kind of wall had risen between us.

I wrote a good hand those days and the leading merchant of the village engaged me to post his books every Saturday at ten cents an hour. Thenceforward until Christmas I gave my free days to that task. I estimated the sum that I should earn and planned to divide it in equal parts and proudly present it to my aunt and uncle on Christmas day.

One Saturday while I was at work on the big ledger of the merchant I ran upon this item:

October 3. S. Wright—To one suit of clothes for Michael Henry from measures furnished by S. Robinson $14.30
Shirts to match 1.70

I knew then the history of the suit of clothes which I had worn since that rainy October night, for I remembered that Sam Robinson, the tailor, had measured me at our house and made up the cloth of Aunt Deel's weaving.

I observed, also, that numerous articles—a load of wood, two sacks of flour, three pairs of boots, one coat, ten pounds of salt pork and four bushels of potatoes—all for "Michael Henry" had been charged to Silas Wright.

So by the merest chance I learned that the invisible "Michael Henry" was the almoner of the modest statesman and really the spirit of Silas Wright feeding the hungry and clothing the naked and warming the cold house, in the absence of its owner. It was the heart of Wright joined to that of the schoolmaster, which sat in the green chair.

I fear that my work suffered a moment's interruption, for just then I began to know the great heart of the Senator. Its warmth was in the clothing that covered my back, its delicacy in the ignorance of those who had shared its benefactions.

I count this one of the great events of my youth. But there was a greater one, altho it seemed not so at the time of it. A traveler on the road to Ballybeen had dropped his pocketbook containing a large amount of money—two thousand seven hundred dollars was the sum, if I remember rightly. He was a man who, being justly suspicious of the banks, had withdrawn his money. Posters announced the loss and the offer of a large reward. The village was profoundly stirred by them. Searching parties went up the road stirring its dust and groping in its grass and briers for the great prize which was supposed to be lying there. It was said, however, that the quest had been unsuccessful. So the lost pocketbook became a treasured mystery of the village and of all the hills and valleys toward Ballybeen—a topic of old wives and gabbing husbands at the fireside for unnumbered years.

BY AND by the fall terms of school ended. Uncle Peabody came down to get me the day before Christmas. I had enjoyed my work and my life at the Hackets', on the whole, but I was glad to be going home again. My uncle was in high spirits and there were many packages in the sleigh.

"A merry Christmas to ye both an' may the Lord love ye!" said Mr. Hacket as he bade us good-by. "Every day our thoughts will be going up the hills to your house."

As he was tucking the bl around my feet old Nick Tubbs zigzagging up the road from tavern.

"What stimulation travels that man!" said the school "He might be worse, God Reeling minds are worse than ing bodies. Some men are born like our friend Colonel Hand that kind is beyond reformati

THE bells rang merrily as we ried thru the swamp in the snow paths.

"We're goin' to move," said uncle presently. "We've agr get out by the middle o' May."

"How does that happen?" I

"I settled with Grimshaw agreed to go. If it hadn't 'a' for Wright and Baldwin we wo 'a' got a cent. They threaten bid against him at the sale. settled. We're goin' to have a home. We've bought a hundred fifty acres from Abe Leonard. to build a new house in the It will be nearer the village."

He playfully nudged my ribs his elbow.

"We've had a little good Bart," he went on. "I'll tell ye it is if you won't say anything it."

I promised.

"I dunno as it would much," he continued, "but I want to do any braggin'. It anybody's business but ours, an An old uncle over in Vermont three weeks ago and left us eight hundred dollars. It was Uncle Ezra Baynes o' Hine Died without a chick or child. aunt and me slipped down to dam an' took the stage an' went an' got the money. It was money than I ever see before life. We put it in the bank in dam to keep it out o' Grims hands. I wouldn't trust that fur as you could throw a bull tail."

It was a cold clear night when we reached home the stove was snapping with the its fire-box and the pudding in the pot and old Shep dream the chimney corner. Aunt Deel me a hug at the door. Shep and leaped to my shoulders.

"Why, Bart! You're growin' a weed—ain't ye?—ayes ye be," aunt said as she stood and look me. "Set right down here an' ye—ayes!—I've done all the —ayes!"

How warm and comfortable the dear old room with those ed faces in it. I wonder if pa itself can seem more pleasant I have had the best food this can provide in my time, but anything that I ate with a relish than the pudding and milk bread and butter and cheese pumpkin pie which Aunt Deel us that night.

Supper over, I wiped the dish my aunt while Uncle Peabody out to feed and water the Then we sat down in the

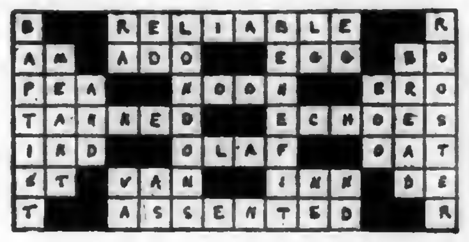
LAST WEEK'S PUZZLE ANSWER



armth while I told the story of my e in "the busy town," as they call- it. What pride and attention they ve me then!

Three days before they had heard my adventure with the flail, as to hich Mr. Hacket, the district at- rney and myself had maintained e strictest reticence. It seemed at the deacon had blabbed, as they d to say, regarding his own brave rt in the subsequent proceedings. My fine clothes and the story of w I had come by them taxed my genuity somewhat, altho not im- operly. I had to be careful not to them know that I had been hamed of the home-made suit. hey, somehow, felt the truth about and a little silence followed the ory. Then Aunt Deel drew her air near me and touched my hair y gently and looked into my face ithout speaking.

"Ayes! I know," she said present- y, in a kind of caressing tone, with touch of sadness in it. "They ain't ed to coarse homespun stuff down here in the village. They made fun ye—didn't they, Bart?"

"I don't care about that," I assur- them: "'The mind's the measure the man.'" I quoted, remembering he lines the Senator had repeated to e.

"That's sound!" Uncle Peabody exclaimed with enthusiasm.

Aunt Deel took my hand in hers and surveyed it thoughtfully for a moment without speaking.

"You ain't goin' to have to suffer that way no more," she said in a low tone.

I rose and went to the parlor door.

"Ye mustn't go in there," she warned me.

Delightful suspicions came out of the warning and their smiles.

"We're goin' to be more comf'table —ayes," said Aunt Deel as I resumed my chair. "Yer uncle thought we better go west, but I couldn't bear to go off so fur an' leave mother an' father an' sister Susan an' all the folks we loved layin' here in the ground alone—I want to lay down with 'em by an' by an' wait for the sound o' the trumphet—ayes!—mebbe it'll be for thousands o' years —ayes!"

"You don't suppose their souls are a-sleepin' there—do ye?" my uncle asked.

"That's what the Bible says," Aunt Deel anewered.

"Wal the Bible—?" Uncle Peabody stopped. What was in his mind we

"On 15 acres of corn, I lost but 3 or 4 hills"—

writes A. B. Wilmot, of E. Thetford, Vt. And it cost Mr. Wilmot only about $3.00 to save from 1-4 to 1-3 of his entire crop. Previously, the crows and other pests had fairly picnicked on his corn-fields. Hill after hill was entirely pulled up. Hill after hill he had to replant every season. This cost him not only money but it cost him a lot of his valuable time right at planting time. Then someone told him of a way to coat his seed corn in a mixture that no crows or any other pests would touch, after they once had a taste of it. This corn-saver was

Stanley's Crow Repellent

Mr. Wilmot sent for some. He mixed it with his seed corn. He did not have to wait for it to dry, but planted it at once. And it did not clog the planter. It did not injure the seed corn. It was not poisonous, so it would not kill birds or animals. But it did keep every crow, mole, squirrel and other pest off of his corn-field, after they got the first whiff of it. Now there are no more scare-crows in Mr. Wilmot's field. There's no more worry over not getting a full crop, so far as pests are concerned. And Mr. Wilmot is only one of hundreds who have written us that they would never plant a hill of corn again without coating their seed corn with Stanley's Crow Repellent. "Money Back" guarantee. Large can, enough for 2 bu. of seed corn (8 to 10 acres), $1.50. Half size, $1.00. If your hardware, drug or seed store doesn't have it in stock, order direct. Address, Cedar Hill Formulae Co., Box 500R, New Britain, Conn.

No. I'm not dead, but what is that stuff.
Let's get him out of this quick.
Seed coated with Stanley's Crow Repellent

Markets

PHILADELPHIA MARKETS

March 16, 1925.

PRODUCE

Offerings of nearly all kinds of vegetables are quite liberal and trading is fairly active on most all of the more important lines. Altho the supplies of apples are a little heavier, there was a fair outlet and prices on all good stock well maintained. Strawberries showing a wide range in condition. Asparagus is lower as the first arrivals from South Carolina make their appearance. Beans are in light supply, strictly fancy bringing very high prices. Peppers bring high prices. New potatoes are a trifle lower than a week ago, and old potatoes rule about steady. Spinach is in excessive supply for the demand. Sweet potatoes move slowly at practically unchanged values. Tomatoes show a very wide range in price. Turnips are about steady. Yams are firm. Watercress is in good demand.

ounty News and Comment

(Continued from page 7)

er grain is quite bare. The wage convention between coal operators miners is yet heated and our [illegible] are unsteady. Potatoes, 80c@$1; apples, $1@1.50; turnips, $1; cabbage, 2c; 10@12c quarter; eggs, 40c; farm 55@60c. Are few farm sales advertised and no farms changing owners. H. W., March 5.

wford County, Pa.—Many have up their maple sugar bushes and a good run of sap. Dirt roads are muddy. Not many spring pigs offer sale yet. Milk condensary asking men to increase the butterfat in milk but putting in a few Jerseys or cows with high butterfat tests. price for February, $2.21 cwt. for tterfat test. Farm butter, 40c; eggs, calves, 11c; pork, 16c; hay, $10 in —O. W. C., March 9.

derick County, Md.—Grain looking; grass should be good if weather is favorable the next few months. t and corn continue high in price there is none to sell. Spring farm have just been started; indications at stock is going to sell high, especially tuberculin tested cattle. Several ly reported bringing over $100. Eggs as 24c on the local markets; butter remains about the same, good bringing c.—R. J. W., March 9.

ester County, N. J.—The first in March showed much activity on e truck and fruit farms. The warm spell in February resulted in a lot spring plowing being done and of the cold frame duties attended Tomato and pepper beds look fine, the plants ready for the cold frames the time comes for that work. seems to be no tendency towards over planting unless it be peppers. will be a big reduction in the planting of potatoes. The canners are offering ton for tomatoes, and the decreased potato acreage will probably go into toes. There seems to be a bigger supply than in several years. Onion are very scarce and the price is high; will curtail the acreage to some extent. There is a greater tendency to sify on all the truck farms.—A. K., h 7.

iana County, Pa.—Farmers are in fields early these mornings folowing plow. Roads are to the bottom now, not nearly so deep as in former. The drag has been helping them rd summer hardness very rapidly. ng February many meetings were over the county in the interests of try, better fruit trees and bull associations. These all met with great success. Many farmers are interested in spraying machines and a trip is made to Ohio on March 13th to ase association bulls. T. b. testing been delayed this spring but a great farmers are interested. Fruit growers report no peaches for 1925, but apples not affected, it is thought. Hay is most unsalable; eggs, which have reasonably high, are down now c. Pigs are gaining in price.—H. A. March 10

caster County, Pa.—Tobacco sales been very slow, but during the last weeks buyers have been out and half the 1924 crop has been contracted for. The price ranges from 10c to per pound for wrapper and 2c to 4c fillers. The greater part of it was hased for 15c and 2c. Wheat is slowicking up and the fields look much r than they did a few weeks ago. price of wheat has dropped from to $1.80. A number of farmers still a part of their crop on hand. Parare finding ready sale at Lancaster 10c each; potatoes, 60c; butter, 45c; 28c; lard, 17c; bran, $37; gluten, ground oats, $32; dairy feed, 20 per protein, $16.50.—R. C. R., March 10.

wrence County, Pa.—Cold weather nues. Ground still covered with; roads frozen and rough, yet the birds are all here. Our road supers are taking advantage of the solid ition of the roads and are hauling rs for the betterment of bad spots on dirt roads. Hay is moving lively. thy, $15@17. The balers are having harvest now. Local stores paying for butter; eggs, 28c; butter, retail in 55c; eggs, 50c. Good health generally prevails considering sudden changes of perature.—M. L. V., March 4.

banon County, Pa.—The warm days ebruary, accompanied by some rain, ied off most of the snow in a few, with the result that the streams e swollen and damage done to some e bridges. The wheat and new grass make a fine appearance. In several ions of the county some plowing has n done in February. Sales are well nded and fair prices are realized. At cent sale cows brought up to $140 a. A sale of South Dakota horses was lately in Lebanon, the average price head being $175. From appearances it looks as if there would be several ant farms in the county this year. es: wheat, $1.90; corn, $1.30; oats,; potatoes, $1; veal, 12c; eggs, 30c; er, 50c; apples, $1.50 bu.; chickens, —P. L. M., March 2.

coming County, Pa.—The warm ther of the last few days of February offset by a six-inch snowfall on March 1 and the woodlot lumber jobs have again started up. Some very good logs have been cut from the scattered standing timber for repairs to the buildings. The farmer bee keepers report nearly a fifty per cent loss of swarms due to lack of stores in the hive. The fall of 1924 did not produce a very heavy honey flow. Fresh cows are quite plentiful, butter still holding at around 50c lb.; eggs, 30c; hay, $12, loose at barn, pressed $15; potatoes, 80c; apples, 75c bu.—C. I. C., March 2.

Monmouth County, N. J.—The spring weather of the early part of February was almost as great a change as the snow during January. Several days of weather with the thermometer ranging forty-five to sixty degrees made some fruit growers realize that a continual spell of cold weather is an advantage unless spring has come to stay. March begins more like a lion than a lamb. So far it looks like a cut in the potato acreage. Some potato land is being taken up by vegetable crops while the records indicate that a number of farms will probably be vacant. Canhouse tomatoes will be grown to some extent in the Freehold area and increased in the section of Upper Freehold and Allentown. Eggs have taken a severe drop and at present are selling for 35c and less in some local communities, while the retail price is around 40c. Plant growers are busy with their greenhouses. A dairy program is on foot in the county which contemplates the holding of community meetings with the ultimate aim of perhaps a county association where problems of better management will be considered. Farmers' meetings are being held occasionally over the county where such subjects as the Japanese beetle quarantine, vegetable marketing, and economic crop production are discussed.—E. D., March 3.

Monroe County, Pa.—A few farmers are hauling manure; many are gathering wood. Lettuce and early cabbage seed have been sown in hot beds; no clover yet sown. Dr. Phoebe Hagenbaugh, of Stroudsburg, celebrated her ninety-third birthday on February 22. Eggs, 30c; beef, 12@14c; hay, $21.70; wheat, $2; corn, $1.50; rye, $1.25; pork, 16c; shoats, $8@10 each.—G. E. S., March 6.

Passaic County, N. J.—The temperature for the past month has been above normal on the average. The roads are in fair condition. The oiled macadam roads where there has been heavy hauling have broken thru in places. Tomatoes, peppers, eggplants, etc., are being transplanted and potted. There has been no plowing yet.—N. D., March 10.

Perry County, Pa.—Last two weeks very much like spring. Farmers getting early spring work out of the way, such as manure hauling, wood supply. A few loads of fat cattle have gone out but at a very moderate price. Most of the wheat looking good for this time of year. Public sales in full swing and prices fairly good; real quality stuff is bringing good prices. Farmers realizing more and more that the scrub and common stock barely pay their feed, while real quality stock return an income. Prices: wheat, $1.70; potatoes, $1; veal, 11c; eggs, 25c; corn, $1.60; butter, 55c; hogs, 10c, live; milk, $2.67, League price, for four per cent butterfat delivered at Duncannon.—J. L. B., March 10.

Potter County, Pa.—The frost is leaving the ground and spring seems to have arrived. Robins, bluebirds, cuckoos and muddy roads are with us. Sugar making is keeping many farmers busy. There are still hundreds of bushels of potatoes stored. An interesting Grange meeting was held February 26-27. State Master P. H. Dewey stated that the man who lends money pays a tax of four mills on the dollar, while farmers often pay as high as eighty-six mills on their investment. Cows are bringing a fair price. Eggs, 28c; butter, 50c. We pay $3.10 for 19 lbs. of wheat flour.—M. C. S., March 7.

Susquehanna County, Pa.—March came in "like a lion." Farmers are kept busy doing chores and cutting pole-wood in piles—getting ready for the buzz-saw. That means a bunch of men for at least one day to work, tell stories, and help each other out. One old gentleman remarked that "seasoned wood is better than money at interest." Cars were "hung up" for a week on account of mud but are being used again, the ground having frozen, and enough snow having fallen to fill the ruts. Bluebirds have made their appearance but the cold March winds will sadly disappoint our feathered friends. Price of milk too low for the price of feed. Hogs are scarce. A few sales advertised for March. Apples, $1, potatoes, 75c, eggs, 35c; hay, $15.—J. A. G., March 4

Tioga County, Pa.—Many older people declared this the mildest February of their memory, but on the twenty-seventh the thermometer registered zero and the wind blew a gale. A new supply of ice formed, and those who did not get ice earlier hustled to get some. A few tapped their sugar orchards during the warm days of February and made a little syrup. The March meeting of the Dairymen's League was held in the Courthouse at Wellsboro with a full house. Eggs, 22c; cow feed, $17@50; potatoes, 75c.—P. W. L., March 9

CAMBRIA FENCE

Good Fence Must be Made of Good Steel

CLEAN steel wire that is strong, springy, full gage and heavily galvanized is used in making CAMBRIA FENCE.

The wire is rolled and drawn and the fence is made in the same department, which insures an inspection method that will not permit wire with flaws of any kind to be used.

The steel is carefully selected by the Bethlehem technical and metallurgical departments as the most suitable for fencing.

CAMBRIA FENCE is a Bethlehem product. Every step in its manufacture—from mining the ore to shipping the finished roll—is controlled by one organization. Uniform quality, uniform construction and uniform long life are thereby assured.

Ask your dealer for CAMBRIA FENCE. There is a style to meet any requirement of the user of field fence.

Three at Once!

CHEMICALS
POTATO SPRAY
KILLS POTATO BUGS PREVENTS POTATO BLIGHT

It is just as important to keep your potatoes free from blight as it is to fight the beetle, flea and other profit-destroyers. If at the same time you can invigorate the crop and increase the yield accordingly, at no additional cost, it means **clear gain.**

POTATO SPRAY does all of this, enabling you at one operation to fight off both classes of plant enemies and invigorate your plants. It is a non-freezing powder form of Bordeaux and arsenate compounded with great care—an insecticide and fungicide put up by a company noted for its farm fertilizers and chemicals.

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

He Lives in the Land of Golden Weddings

WE BELIEVE our readers will be interested in the following letter, received from our friend H. H. Hall, of Potter County. The editor of this paper first made his acquaintance at a farmers' institute held at a little mountain town in Clearfield County more than twenty years ago. Besides practical farm talks Mr. Hall could entertain an audience with good songs well sung. On the occasion mentioned he was singing "Little Britches," a poem by Ex-Secretary of State, John Hay. Mr. Hall's good health, physical prowess, and good age recalls another song entitled, "I'm Old, but I'm Awfully Tough."—R. P. K.

"Well, old friend, don't say you are not surprised, for I believe you are as you see my name on the envelope that brings you this.

"Mrs. Hall and I, seventy-two and seventy-seven years young, respectively, are alone on our dairy farm near the head of the Genesee River, on the northern slope of the Allegheny Mountains, about 2200 feet above sea level, and where the average season between killing frosts is about 102 days. One year in ten it may not be more than eighty-five or eighty-six days, then one will go 120 days.

Cattle Are Healthy, Too

"You whistle and say, 'What do you raise in such a climate?' I answer and say, 'About the healthiest lot of human beings on this terrestrial ball.' Within a circle of one and one-half miles from where I sit there have been celebrated within the last five years five golden weddings. Besides, in the same area are two men and two women all over eighty years of age; also, fourteen over seventy years. In addition to this we have never had a single reactor among the dairy herds of this section.

"The high altitude makes this an ideal dairy section, with one drawback, viz., the extremely short seasons make a good crop of corn for ensilage an X, Y, Z problem in milk production.

(Mr. Hall here gives production figures showing his dairy herd of seven cows has produced from 63,000 to 67,000 pounds of milk per year, feeding grain only nine and one-half months. The test is 3.7 per cent. Few do better than this any place. —Ed.).

Like the Garden of Eden

"However, good health and long life has some drawbacks. Our's is not the only farm here run by aged people. Good help in the house is out of the question. 'There ain't no such animal' as women or girls willing to do housework in small and aged farm families who are usually 'sot in their ways.' The farms do not earn enough to hire good help outside, and there you are. Now don't call this letter the squeal of a pessimist. I don't know an eighty-year-old, no, nor a seventy-year-old who is willing to trade a milking stool or a kitchen stove for a harp. We get too much out of life,—rubbering on the telephone, listening in with the radio, betting dollars to doughnuts whether our little railroad is going to lie down and die or not.

"Wouldn't you like to see the only known territory that answers the description of the Garden of Eden 'Where the rivers divide into four heads?' If so, get in your car next summer and come to see me and I will show you around. But wear something besides fig leaves, because this is not a fig leaf climate, especially in winter.—H. H. Hall."

Another Horseless Farm

DEAR EDITOR:—In a recent issue of Pennsylvania Farmer, under "Our Farm" by R. P. K., was a paragraph relative to working a thirteen-acre farm with a small tractor and without keeping a horse. Wish to say I am doing this myself, using a 950-pound walking tractor and a one-half-ton truck and not keeping a horse. We raise berries, corn, potatoes, soy beans and garden truck.

Last year I did all my plowing, seed bed work and cultivating with my small tractor. I find the machine will do any kind of work that a 1500-pound horse can do and for cultivating it works much better than a horse. My tractor will work on a five-tooth cultivator eight hours on one gallon of gas and one-half pint of oil.

You will not find it necessary to engage a single horse for any work if your farm is nearly level. But where the power of a team of horses is necessary you will find it will pay to have your heavy plowing and breaking done with them or with a heavier tractor, as the walking machines are not heavy enough to do such work satisfactorily. Mine has engine power enough but the bull wheels will slip in heavy plowing and discing.

Two-wheeled Cart Carries Half Ton

I have a home made two-wheel cart I use for hauling everything around the farm with my machine. It will handle a one-half-ton load very nicely.

The tractor requires but little practice to handle it effectively on any farm implement. I use an eight-inch bottom plow and it will travel right along in stubble ground, plowing six or eight inches deep; also use an eight-disc harrow, the discs being twelve inches in diameter. The tractor can also be used for belt work.

Tractors never tire in hot weather, and when the engine stops the operating costs stop with it; with reasonable care they seem to operate right along with no trouble. I think you will, after a trial, be very well satisfied with results in this undertaking. —C. L. C., Hunterdon County, N. J.

The Light in the Clearing

(Continued from page 29)

may only imagine, as he did not say.

To our astonishment the clock struck twelve.

"Hurrah! It's merry Christmas!" said Uncle Peabody as he jumped to his feet and began to sing of the little Lord Jesus.

"Off with yer boots, friend!" he exclaimed when the stanza was finished. "We don't have to set up and watch like the shepherds."

I scampered up the stairs in my stocking feet, Uncle Peabody following close and slapping my thigh as if my pace were not fast enough for him. In the midst of our skylarking the candle tumbled to the floor and I had to go back to the stove and relight it.

Embargo Does Not Prevent Shipment of Day-Old Chicks

SHIPPERS and buyers of day-old chicks will be glad to know that embargoes on poultry placed because of the poultry influenza do not apply to shipment of day-old chicks when placed in new or disinfected containers. Parcel post shipments are in no way affected by state embargoes. There is no reason to believe that the disease can be spread thru shipment of day-old chicks.

HILLPOT Quality

STURDY PURE BRED HIGH-EGG-YIELD CHICKS

The Results They Bring

—in dollars and cents to our customers—are frequently amazing to those unacquainted with the sterling merit of Hillpot Quality Chicks.

Quick growth and early—and sustained—laying are responsible for big poultry profits. That's a rule of successful poultry keeping that Hillpot Quality Chicks are daily proving the truth of.

LAWRENCE P. UHL

A PIONEER IN THE BABY CHICK BUSINESS. For 20 odd years I have been producing high class Baby Chicks which have gone out to thusands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business, making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have now decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices.

100% Live Delivery Postpaid.	Prices on 50	100	500	1000
White, Brown and Buff Leghorns	$7.00	$13.00	$62.00	$120.00
Sheppard Anconas, R. C. Brown Leghorns	7.50	14.00	68.00	130.00
Barred and White Rocks, Black Minorcas	8.00	15.00	72.00	140.00
S. C. and R. C. R. I. Reds	8.00	15.00	72.00	140.00
White Wyandottes, Buff Orpingtons	9.00	17.00	82.00	155.00
White Minorcas	10.50	20.00	95.00	
Silver Laced Wyandottes	10.00	18.00	85.00	
Light Brahmas	13.00	25.00	120.00	
Assorted, Heavy Breeds	7.00	13.00	62.00	120.00
Assorted, Light Breeds	5.25	10.00	48.00	85.00

For quick action, you can order direct from this advertisement in perfect safety. Reference: Farmers State Bank, Bradstreets, or Duns. Or get our free Catalog and further details as to prices on extra select Chicks. Write your exact wants at once if you cannot make up your order from above price list. I want your business this season and you may rest assured that we will take care of you RIGHT. I am the only one of the Uhl family in the hatchery business. To reach me be sure to use this address.

LAWRENCE P. UHL, BOX 65, NEW WASHINGTON, OHIO.

FUNDS FOR RESEARCH

New Agricultural Experiments Undertaken at State College

THE further endowment of the Pennsylvania Agricultural Experiment Station, starting now with $20,000 a year and reaching $60,000 a year on and after 1929, is provided for by the Purnell Bill signed a few days before his inauguration by President Coolidge.

This bill provides for the same support for all agricultural experiment stations of the United States.

Dean Watts, director of the Pennsylvania Experiment Station, expressed relief in the fact that the program of research at State College could have more leeway starting in July when the new federal support becomes effective. He said:

"Economic production and cooperative marketing are the biggest problems facing Pennsylvania farmers today and these will receive first consideration for investigation at the Experiment Station, along with the completion of an excellent program of important projects now under way.

To Study Selling Problems

"The new act emphasizes that experiment stations pay special attention to marketing, rural sociology and home economics. We will proceed immediately with the beginning of the new fiscal year in July to carry out these provisions in the best possible way."

The Pennsylvania Station is conducting the oldest soil fertility experiment in the United States. It will be continued with new phases. The breeding of new farm and garden plant varieties has recently given three new high yielding tomato varieties, a new cabbage variety, Pennsylvania 44 wheat and two new outstandng oats varieties. This plant breeding work can now be continued on a larger scale.

Plant Pests Need Attention

The need for more marketing research was shown in the Blair County survey, and work in other communities along this line will doubtless aid farmers in securing better returns for their produce. Standardization and grading will receive further study.

The landlord and tenant problem is another serious question that Dean Watts feels should have immediate attention. There are many serious plant pests and diseases that are without adequate control measures, such as potato blight, apple collar blight and wire worms of truck crops.—D. M. C.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

ITCHY SKIN.—Mare ten years old eats well but is thin; she is inclined to rub tail and hind quarters. She bites the manger but does not crib, or eat wood.—F. S. S., New Sheffield, Pa. Groom her twice daily, give her one-half ounce of baking soda and a teaspoonful of common salt in feed or in drinking water three times a day. Feed her plenty of roots, keep stable well supplied with fresh air.

SHOULDER SWEENY.—I have cured three cases by blowing air under the skin, but it has to be done twice a week and the animal gets tired of the knife. I have applied a blister, the muscles are not much atrophied.—F. M. G., Frankford, Del. Veterinarians do not approve of your line of treatment for atrophy of the muscles. A mild, stimulating liniment should be freely and frequently applied, or a mild blister applied every ten days.

BUNCH ON SHOULDER.—I have a gray horse nine years old, which when worked gets a bunch on shoulder. I don't believe it pains him, but how can I get rid of it?—J. R., Sewell, N. J. Have your veterinarian cut out bunch; no other treatment will prove effective.

SHY BREEDER.—I have a cow that has been bred several times, but fails to get with calf. Comes in heat regular.—E. H. C., New Albany, Pa. If too fleshy, reduce her, and give her plenty exercise. Keep on breeding her and she will perhaps get with calf.

E. V. M., Bloomsburg, Pa.—A healthy heifer two years old which comes in heat regularly should get with calf, if bred to a bull which is a fairly sure calf getter.

LIGHT MILKERS.—We keep two cows, both free from tuberculosis. They are eight or nine years old, but do not give much milk. One had attack of milk fever and recovered, the other was cleaned by our veterinary and she is some stiff.—O. S., Pa. Mix equal parts bicarbonate of soda, gentian, powdered cinchona, common salt, together, and give each cow a tablespoonful at dose in soft feed two or three times a day. Feed some clover, alfalfa, and roots.

NERVOUS HEIFER.—We have a heifer eleven months old, seemingly healthy, but inclined to fight other animals; when slightly punished, gets excited or faints and may fall down. She will fight everything that comes in her way. So far as I can tell she is healthy and looks fine.—E. T., East Windsor, N. Y. If she comes in heat, breed her and she will quiet down. You had better keep her in box stall away from other cattle. It is a mistake to allow her to fight other stock.

PARTIAL PARALYSIS.—I have a cow that has been sick for a month. She has some pain after eating much food; first symptom was loss of the use of her hind quarters. She sits up like a dog, but is unable to get up on her legs. Don't believe she has been hurt.—H. P. S., West Grove, Pa. Give her one dram of fluid extract of nux vomica at dose in drinking water four times a day. Apply mustard and water to loin and hind quarters three times a week. Feed her plenty clover and roots.

COW URINATES WHEN BEING MILKED.—I have a cow which freshened in November; since then she has developed the bad habit of urinating when being milked. She never had the habit before. I have bred her, but do not know as yet if she is with calf.—O. C., Mt. Jewell, Pa. Kindness and avoiding excitement at milking time is about all that can be done to overcome this habit. When one cow in a dairy urinates others are likely to follow by doing the same.

CATARACT.—I have a puppy four months old that is blind; caused by cataract, our veterinary says. Can he be cured?—S. O., Newfield, N. J. No, cataract in dogs is incurable.

NERVOUSNESS.—We have a collie dog, spayed, eight years old, who has been ailing lately. Two weeks ago she was unable to get up, had little use of her legs, but after a time we helped her up. She staggered, but in an hour seemingly recovered.—J. T. M., Drumore, Pa. Give her one ounce of castor oil once a week; feed her plenty carrots and increase her exercise, for she is perhaps too fleshy.

COUGH.—Puppy four months old has cough.—W. W., Tuckahoe, N. J. Give him ten or more drops of paragoric at dose four times a day.

FELINE DISTEMPER—CHRONIC CATARRH.—Every one of my kittens has died; the old cats have nasty discharge from nose.—W. H., Marwood, Pa. Your cats are incurable, better destroy them. Disinfect their kennel and secure new stock.

PUT your horses in sh[illegible] for spring. Don't let the[illegible] start the season with min[illegible] ailments that might put the[illegible] out of commission. Get the[illegible] fit—and keep them fit—with G[illegible] bault's Caustic Balsam. Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Old Leaky Roofs

Made Like New With

Saveall LIQUID ASBESTOS ROOFING

TRADE MARK REG.

At a Surprising Low Cost

At Last! —An amazing new way—a far better way, and a much cheaper and easier way has been discovered to stop the leaks and make your old roofs as good as new with SAVEALL —the wonderful new Liquid Asbestos Roofing.

No longer do you need to pay a lot of money for new roofs if your old roofs leak and are in bad condition. You don't even have to go to the expense of removing the old roof. It makes no difference what kind of roofs you have—what materials they are made of—or what condition they are in—SAVEALL Liquid Asbestos ROOFING will stop the leaks, stop the rot, rust and decay, stop the repair bills and make your old worn-out roofs as good as new. We prove it 4 Months Before You Pay. We prove it or—NO PAY. We guarantee it 10 years after you PAY.

FREE

With every order sent in from this advertisement we will also include **absolutely FREE** a Roofer's Brush for applying **Saveall** roofing and a 25 lb. drum of our Plastikite Patching Cement for patching leaks around chimneys, flashings, gutters, cornices, etc. Send coupon at once and get this FREE Roofer's Brush and Patching Cement.

4 Months Free Trial

Just to prove to you right on your own roofs—right before your own eyes that SAVEALL Liquid Asbestos ROOFING will SAVE YOUR ROOFS—fill up every crack and crevice, stop the leaks, cover all nail holes, pores, seams and rust spots—seal them up tight and do it for a fraction of what a new roof would cost—we will ship you all the SAVEALL you want—one barrel or ten—on 4 Months' FREE Trial without a penny of pay in advance.

Simply tell us on the coupon below how much SAVEALL you can use. We will ship you all you want without a cent of money down. You test it, try it for 4 full months at our risk and if it does not do all we claim,—you say so and we will cancel the charge.

25 Lbs. PLASTIKITE ROOF CEMENT

Guaranteed 10 Years

Saveall Roofing comes in a thick Liquid form ready to spread. The only tool you need to apply it is the roofing brush which we send FREE with every order. Saveall is composed of genuine rock fibre asbestos combined with preservative oils and waterproofing gums, and is made in our own factory under our own special process. One stroke of the brush puts on a new seamless, indestructible, leak-proof covering over the old roof surface—a roof that is not affected by heat or cold and will give you satisfactory service for 10 years or more.

Saveall Roofing has been sold on this liberal "4 Months' Trial Plan" for years. Never sold by Jobber, Retailers or Salesmen, but put up in Steel Barrels and Steel Half Barrels and sold only direct from our factory to you at lowest factory prices. None but the finest quality of materials are used in Saveall. No better grade can be obtained anywhere at any price. That's why we guarantee it for ten years. Furnished in Black only. One gallon will cover an average of about seventy square feet of roof surface.

MAKES OLD SHINGLE ROOFS WATERTIGHT AND AS GOOD AS NEW

STOPS RUST AND LEAKS IN SHEET METAL ROOFING WITH ONE COAT

RENEWS AND WATERPROOFS PAPER, FELT OR COMPOSITION ROOFS

SEND NO MONEY Just The Coupon

One gallon of SAVEALL covers an average of about 70 sq. feet of roof surface.

Wood lots of 25,000 to 50,000 feet now profitable

How about that wood lot on the hill. It's a long way from the sawmill, perhaps, but then there is at least 25,000 feet of spruce there waiting to be cut. Then there's Neighbor Smith's lot, 50,000 feet, just as far away. Both of these lots are more profitable in lumber than in taxable real estate.

Why not get a Lane Tractor Sawmill and take it up to the lots, saw the logs right on the ground (only one haulage), then when you've turned your lot into cash, give Neighbor Smith a boost, then Mr Jones. Keep that small tractor of yours busy 12 months in the year instead of 3. Get the most out of your machinery and from your farm.

The Lane Tractor Sawmill is built for the man with the small wood lot who wants some ready cash from his own farm or by helping out his neighbors.

It's a real Lane mill in every feature. One day, two men, and a small Tractor is all that is required to take down, move several miles, and set up ready for business.

6,000 feet of lumber or 500 railway ties is its 8 hour capacity.

And the cost is very small, in fact, within the reach of almost any reader of this advertisement.

The Motor Cultivator Has Arrived

his Machine Takes the Place of Many Hoes on the Modern Vegetable Farm

OTOR cultivators, or garden tractors as some folks call them, have arrived. Of they have been used by a few forward people for several years back but today have reached the point where great numbers tical growers use and believe in them. If oubt it, go to any meeting of vegetable or take a trip thru a gardening section.

few days ago I visited a number of the com- l gardeners around Bustleton, the inten- vegetable growing section for the Philadel- market, and found a far different attitude them regarding motor cultivators than I a similar trip four years ago.

them the machines have passed perimental stage, and as far as d find, every large grower is at least one and several have than one.

replies of Clarence Shallcross, had a motor cultivator for two in answer to my questions, are l of the general opinion in the leton territory.

h, I like it," he said. "I got no on it. I get mad at the darn once in a while but find out my own fault."

Valuable for Early Crops

course, the little machines will o anything and everything, but led to find a grower who would dmit they would pay for them- in one season if given a ce.

e Philadelphia men find motor vators especially valuable in the spring for the first working of "hard ground salad." This is ttuce crop which is sown on unplowed d as early in the season as possible. As the this district has a tendency to bake, the cultivation with push plows is very hard.

th his motor machine Mr. Shallcross told e does as much in half a day in the "hard ground salad" as three men will do in the same time with hand tools. This is a big saving just at the time when men are most needed. Following early lettuce cultivation there are any number of opportunities for the little tractors as their tool adjustments are practically unlimited.

It is not only on the average run of commercial gardens that the small power machines are proving popular, but on the extra large and smallest gardens as well. A friend of mine in West Springfield, Massachusetts, who operates possibly the largest market garden in New England, last spring did all his seeding with a three-row drill hitched to his motor cultivator. The year before it took six men to do the same work.

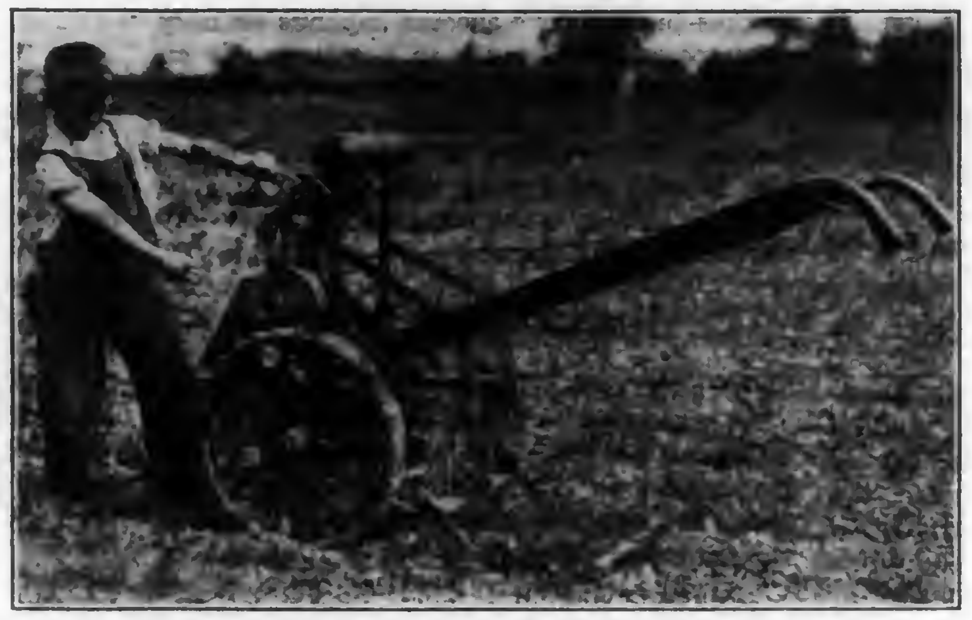
With the tractor drill he not only did his seeding in less time but had straighter rows, was more certain the seed was planted right and saved a lot of money. He has three motor cultivators now and finds lots of ways to use them to advantage, such as three-row cultivating, cutting spinach, carrying and operating from the power pully two hand dusters to combat the aphis, throwing furrow to plant row to smother small weeds, working close to large plants previous to horse cultivation and a great variety of straight one-row cultivating and hoeing.

As to what a motor cultivator can mean to the man with a small place let me tell you a little about the Philadelphia high school teacher who has had one for the past four years. This season he will buy another one, not because the first is worn out, but because he has bought two more acres of ground and his son is now old enough to run a machine.

He has devoted his time after school, Saturdays and summer vacation to intensive gardening on his two-acre place about fifteen miles from the city. He has raised the general run of garden crops, planting as large an acreage of late celery as possible, with some fruit and plenty of cut flowers to sell at his roadside market. How well he has succeeded would be telling family secrets altho he will admit taking in $750 gross last year from the half-acre plot beside his house.

Gives Tractor the Credit

His financial success he credits largely to the little tractor, for without it he could not have done what he has. When it was most needed a horse could not be hired for love or money, and the two acres would never warrant keeping one. The ground was always plowed and fitted in the spring with a team but afterwards the small tractor took care of it. This year my friend plans to keep accurate cost records of what his two tractors do for him and next fall he ought to have a real small tractor story to tell.—Montgomery Dodge.



This ten-year-old boy did all the cultivating of 100.000 asparagus roots last year with garden tractor. He is shown starting the motor.

SOILS AND FERTILIZERS

By Dr. J. G. LIPMAN
Director New Jersey Experiment Station
Questions on these subjects are invited.

tilizer Mixing—Danger of Scab

For fertilizing potatoes I, as well as most the other growers here, use the chemicals mix them by hand. Nitrate of soda, sul- of ammonia, acid phosphate and muri- of potash, with ground limestone as a ditioner, are the chemicals generally used. Generally these chemicals are mixed and in the fertilizer drill, or the potato ter, the same or the following day, thus g up considerable help at a rush time. If mixing could be done, say a month be- planting, much time would be saved in rush of planting.

Kindly advise me if a mixture of these terials would deteriorate if allowed to for, say, one month. How would the chanical condition be? Any information can give me will be much appreciated. a mixture about as follows: 125 pounds nitrate of soda, 65 pounds of sulphate of monia, 700 pounds of acid phosphate, 250 nds of muriate of potash, and 250 pounds ground limestone.—K. A. S., Prince Ed- rd Island, Canada.

theoretical grounds, two objections might ed against mixing the chemicals you men- ome time prior to their use. One has to do the effect on the mechanical condition of the zer, and the other with the possible loss of ammonia. When sulphate of ammonia is mixed with lime there is some loss of ammonia from the mixture, even at ordinary temperatures.

The loss might be quite small where the lime consists of ground limestone and where the materials are kept in a dry condition. If hydrated or ground burned lime is used, the loss would be much greater, especially when the material is kept in a moist atmosphere.

When only 65 pounds of sulphate of ammonia per ton of mixed material containing also 250 pounds of ground limestone and 700 pounds of acid phosphate are used, the danger of loss of ammonia would be quite slight. On the other hand, the tendency of the mixed material to harden on standing would be fairly pronounced.

Tends to Develop Potato Scab

If the saving of labor due to mixing a month or more before the use of the materials were large enough, the farmer might take a chance of being obliged to regrind or pound up the material and to screen it prior to its use.

There is another feature about the mixture which you are using that should not be overlooked. The addition of ground limestone to potato fertilizers always has a tendency to favor the development of potato scab. The practice of using ground limestone as a filler, if continued year after year, is certain to lead to considerable trouble from potato scab.

If this condition arises, the use of sulphur might become necessary for ridding the soil of the potato scab fungus. Where the land is free from scab, where clean potatoes are being grown, and where the seed is treated with corrosive sublimate or formaldehyde, there may be no serious objection to the using of ground limestone as a filler as you are doing.—J. G. L.

The Value of Oyster Shell Lime

Please advise us on the value of oyster shell lime for grasses, general crops and orchards. Would you recommend its use in preference to hydrated lime for any of the above uses?—O. E. L., Cape May County, N. J.

Hydrated lime usually contains sixty-five to seventy per cent of actual lime: on the other hand, ground raw oyster shell lime is sold on the basis of fifty per cent of actual lime. One and one-half tons of oyster shell lime should, therefore, be equivalent to one ton of hydrated lime. It should be remembered, also, raw oyster shells contain about three fourths of one per cent of nitrogen and of phosphoric acid. The value of shell lime for grasses, general crops and orchards should be as great as that of the hydrated lime.—J. G. L.

Vol. 91, No. 13. Phila., Pa., March 28, 1925 Whole No. 1454

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

It may be a little farther around the corner of a square deal, but the road is better.

A Phenomenal Growth

THE past twenty years has seen the development of many additions to modern life, some of them having an unprecedented growth. Perhaps the leading two are the automobile and the radio. Even so short a time ago as four years the radio was known to the majority of people simply as a principle, and few imagined that in the next few years it would be found in millions of homes. Even when it became evident that its development would be general many people felt that it was but another passing fad which the American people are wont to indulge for a while and discard. But the benefits which the radio brings to families is so real and so much appreciated that it has already passed out of the age of fadism and has become almost a household necessity. No class of people are more benefited by a good radio set than farmers. Shut away by distance from much of the best music, lecture halls, etc., the simple process of "tuning in" gives them many of the things which country life lacked heretofore. As time goes on, transmission of the more practical things will no doubt become even more common and a radio will be considered as necessary as a telephone.

Public Censorship

A GREAT deal of publicity has been given to the news item that certain books and plays made public during the past winter have offended the moral sense of the general public. What is more interesting is the fact that in almost every instance they have proven to be financial failures because of lack of patronage. This result was not due to the work of the censors so much as it was the disapproval expressed by the public in withholding its patronage. This is but another example that the public as a whole has a rather high moral standard and that it does not approve of obscenity, lewdness and other risque forms of entertainment. Will H. Hays, in a speech the other day to motion picture directors, said: "I simply lay before you one formula, and that of what you must not do. You must not offend common decency. That's all."

What is "Business"?

THE question most frequently asked during the past few years when a political or economic subject was under consideration has been, "What will be the effect on business?" Of course, the word is used loosely by the majority, but among politicians and city editors business means, manufacturing, transportation, buying and selling, and making loans. It should include agriculture, but most frequently this fundamental business is not in the minds of those who talk most about lessening taxes, fixing rates, passing restrictive laws, etc. They seem to forget that agriculture is the foundation of prosperity in the United States, and proceed on the assumption that a permanent structure can be built upon an insecure basis.

Farmers as a class are anxious that other legitimate business shall be prosperous. They fully realize that their own business success depends upon a prosperous buying public, but they do object to the assumption that the business of producing the nation's food and clothing material is conducted on a different economic basis than that upon which other lines of business is conducted. To be told repeatedly that the farmer's success depends entirely upon personal efficiency in production is an affront which, we hope, will arouse farmers to the duty of forming strong selling organizations. The wielding of a business "club" has become even more effective in modern times in getting what you want than was the old-time voters' "club."

Planting Intentions

THE acreage of leading crops which farmers expect to plant the coming season, as estimated on March 15 and reported by the Department of Agriculture, is slightly above the 1924 acreage in most instances. Of course, the intention to plant is not a forecast of what will be planted. Weather, labor, prices and other conditions will have a bearing upon the actual crop acreage. It may be more and it may be less than the estimate made at this time.

The following figures indicate the proposed increase in the crops named: spring wheat, 14 per cent; corn, 2.3 per cent; oats, 5.6 per cent; barley, 23 per cent; sweet potatoes, 29.5 per cent; tobacco, 10 per cent.

It is estimated that there will be a decrease of four per cent in the white potato acreage.

Insure Your Seed

A GOOD deal of alarm was felt last fall over the question of this year's seed corn supply. So much corn was immature when it was cut, and so much frosted before it was harvested, that it was felt much of the 1924 crop would not germinate. The fear has lessened somewhat, but no farmer whose corn was not fully ripe when cut, or was not kept under good conditions, can afford to guess at its germination qualities. It should be tested, and tested thoroly. This means that each ear should be numbered and an accurate watch kept of its performance in the testing box or "rag doll." Many men do not mark the ears tested and when they are done they do not know which ears show low vitality.

The seed potatoes should be treated for scab before they begin to sprout. This advice applies regardless of whether it is certified seed or not. Scab was severe in many localities last year and many potatoes sold at a discount because of their scabby appearance. Treatment of seed is somewhat troublesome but it is foolish to plant costly and otherwise good seed only to harvest a crop that w bring top prices. Treatment with forma corrosive sublimate should be given befo potatoes begin to sprout.

Factional Bickerings

THERE is still considerable of a " at Harrisburg, notwithstanding things have been corrected. The "me due to factionalism and cliques existi the Hill. To an outside observer it ap that things and purposes other than the action of the immediate business actuate of the so-called leaders. When politician get that their chief business is that of r senting the people and become mere pa log-rollers it is time for the people to r their wrath and smite them. As a re the present situation two bills in which of the people of the state, including fa are vitally interested are in jeopardy. O the bond issue for forest development, the other is the new game bill. The latte prepared by a conference representin farmers, the sportsmen and the Game mission. It would afford a measure of for those who have suffered loss thru th redations of deer and other game. Perso we prefer a political fight between two parties, rather than fights between fa within a strongly dominant party.

Wheat Prices

THE quotations of the wheat market day to day during the last week shown a price change about as erratic movements of the thermometer have lately. No doubt fortunes have been mad lost in wheat since the last crop was ha ed, but not by farmers. No one knows the price of wheat will be next July, the speculators are betting that it w around $1.40 to $1.45, and that it will be next September. While these men freq miss it, yet they are shrewd "guessers" the price futures indicate that grain for the coming year will not reach th level of the last two or three years.

Washington Letter

TO REVISE MARKETING PLAN.— the intention of the President's Agric Conference to hold another session Congress convenes, at which, it is indi a cooperative marketing plan will be de ed which will more nearly meet the app of the farmers. It is felt by members farm bloc who favored the Capper-H cooperative marketing board bill, tha farmers in general did not fully under the proposed plan and that much misle propaganda was sent out for the sole p of stirring up opposition to the bill.

ASSISTANT SECRETARY IS D FARMER.—R. W. Dunlap, of Ohio, has appointed assistant secretary of agric by President Coolidge. Mr. Dunlap co near to being a dirt farmer as any m ceiving an appointment to office in Wa ton in many a day. He has spent pract his whole life farming. He is a gradu the Ohio State College of Agriculture, some time he served as state dairy and commissioner and also as secretary o state board of agriculture. With these qualifications and his known [illegible] mating progressive movements al lines it is believed that he will take assistant secretary's place something than name only.

THREE STATES CLAIM JARDI Three states are claiming Secretary of culture Jardine as their own or ad "native son." At a banquet in Washi given by the Idaho state society Secr Jardine was welcomed on behalf of his state by the toastmaster. Gov r Sp

claimed the secretary for his because he received his education in Utah, and Representative g, of Kansas, claimed him for as, because he came to the Sunr state when he got wisdom. tary Jardine assured them that longed to all these states.

AR NEW DISEASES.—The of the Department of Agriculin preventing contagious anidisease from gaining a foothold s country is made much more lt because of the activities of e institutions and independent ists in bringing into this country virus of deadly diseases that are lent in foreign countries. A few go an East African scientist had journeyed nine thousand with a quantity of hog blood ing the virus of a dread disturned the virus over to the u of Animal Industry. It was tly consigned to an incinerwhere it was burned and ceased a danger to the thousands of isers in this country.

e gentleman from East Africa the best of intentions," says Dr. er, chief of the Bureau of Animal Industry. "He wished to have entists who have been so succl in combatting hog cholera in ountry work on an unknown e which was causing great to swine growers in his country. But if a small portion of the hog had escaped it might have d a greater menace to the industry in this country than cholera ever was."—E. E. Rey-

Harrisburg Letter

AKING NEW PATHS.—Once bills carrying appropriations of money hospitals and homes, of which ought to be supportheir communities, are making ges in legislative policy in Harg. Instead of being sent to esk of the Governor in the closours of session they are going year in a mass so executive action must be taken in time for the makers to review any reductions tees he may deem necessary.

ONOMY RULES.—The interestpart about all this legislative dent making is that economy uled in rigorous style, another to take the edge off any gubertial objections. But in cutting the departmental allowances, not the hospitals, have suffered. will not tend to make things more pleasant. The total sum will be under the lowest estiin all probability, but at the time there will likely be the est sum ever given for educa-

W AGRICULTURAL BILLS.— not appear many bills dealing with agriculture will get thru. The emergency appropriation has been run on a siding. The corn borer quarantine has been sent to the Governor and several bills dealing with fertilizers are scheduled to go thru. But there has been an absence of weed and other bills which occupied attention in former years. The bill regulating sale of insecticides and fungicides has been changed so that stocks on shelves at this time shall not be affected.

TALK OF NEW DRY BILL.—Defeat of the administration dry bill, which had provided the headquarters of the alcohol permit board should be in the Department of Agriculture, altho none of its employes should have anything to do with it, has caused some talk of a substitute bill of less drastic form to control the alcohol trade and be administered by state police.

NEW DEER ARRANGEMENT.—An agreement has been reached whereby a new measure to provide for killing deer where they become a nuisance is to be put thru. It does away with much of the red tape now necessary under the Game Commission. In this connection there has appeared a substitute plan for the $25,000,000 forestry bond issue, which will come to a show-down this week. It is a bill to add a dollar to hunters' licenses and provide that $500,000 a year shall be spent for buying lands for forests, hunting and fishing; a share of the money to be used for game propagation and $150,000 made available every two years for damage done by game. It is estimated the whole hunters' license revenue would run over a million dollars a year under this plan. —Hamilton, Harrisburg.

New Jersey Letter

SOUTH JERSEY FRUIT NOTES. —The cold snap of early March, altho damaging the fruit buds to some extent, is now generally considered to have been of considerable benefit. The warm weather of late winter advanced the buds to a danger point and further development of the buds followed by cold weather would have caused considerably more damage. Indications point to a fair sized crop of both early apples and peaches in central and southern New Jersey.

MILK CONTRACT AGITATION.—Milk producers adjacent to the New Jersey shore resorts and Philadelphia have been meeting some difficulty with milk distributors on the question of annual contracts. Many farmers found it to their advantage to distribute their milk during the summer months so as to secure the benefit of the heavy seashore trade, whereas dealers insist upon a blanket contract which calls for the delivery of milk to them thruout the entire year.—B.

To Radio Fans

WE TAKE the following from a letter recently received from a reader living in an isolated section of northern Pennsylvania: "We surely have made good use of the radio today (Sunday). This morning we listened to the services in Shady Side Presbyterian Church, Pittsburgh. The sermon was very practical and helpful. Then we heard a service in a Christian church, then a concert. Tonight we "attended" an Episcopal service, then broke in on an address by Rabbi Levy up in Boston. Following his address there was an open forum and he answered questions for an hour. Many of the questions came from people who had been listening to him by radio and some came by telegraph from as far south as Augusta, Georgia. It was all very interesting."

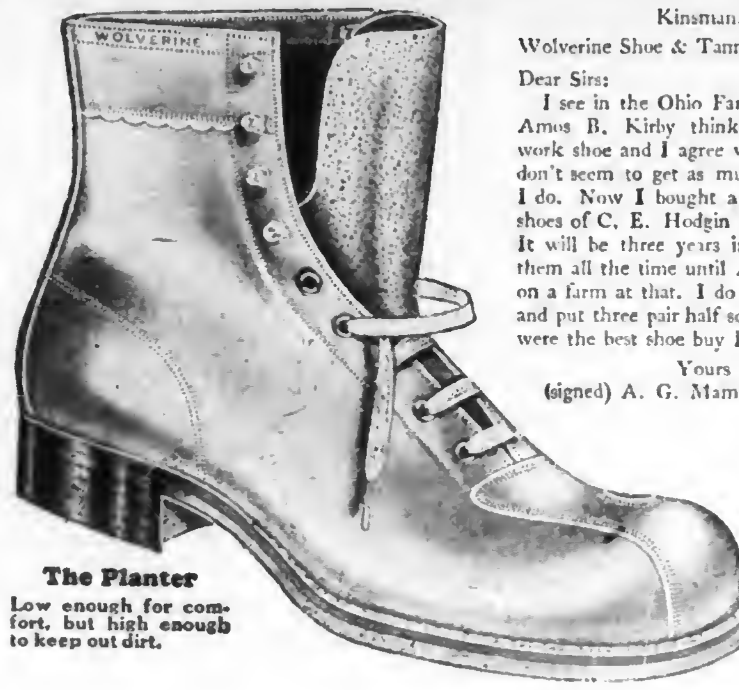
This is but a sample of the things that are being enjoyed on many farms by farmers who own radio receiving sets. The endless variety of the programs broadcast on weekdays provides unlimited entertainment for everyone with radio outfits.

But we needn't tell you what is "on the air." We want you to tell us about it. How many different stations have you heard with your receiving set? What is the farthest distant station you have heard? What is the most interesting experience you have had with your radio? What kind of programs do you like best? Is it the youngsters or the old folks who enjoy radio most? Have you found market and weather reports valuable?

For the most interesting letter about your own or your neighbor's experiences with radio we will pay five dollars. All other letters that we can publish will be paid for at space rates. Let's have a good lively experience meeting.

Address letters to the Radio Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

WOLVERINE
The 1000 Mile Shoe



The Planter
Low enough for comfort, but high enough to keep out dirt.

Kinsman, Ohio, 4-18-1924
Wolverine Shoe & Tanning Corp.
Dear Sirs:
I see in the Ohio Farmer tonight where Amos B. Kirby thinks you have a fine work shoe and I agree with him. Only he don't seem to get as much out of them as I do. Now I bought a pair of Wolverine shoes of C. E. Hodgin at Whittier, Iowa. It will be three years in June and I used them all the time until April 1, 1924 and on a farm at that. I do my own half-soling and put three pair half soles on them. They were the best shoe buy I've ever had.
Yours truly,
(signed) A. G. Mampton, Kinsman, O.

It wears 1000 miles
and stays soft—wet or dry
—genuine horsehide tanned a new way!

Men, here's something new in a work shoe. A shoe that actually wears 1000 miles and more. Try it and see for yourself the amazing wear you can get out of this horsehide Wolverine. Thousands write us that they never believed it possible to make a shoe so soft and easy on your foot—yet so hard to wear out.

The secret of *this* shoe is our leather. Genuine Cordovan horsehide. The toughest wearing leather known. It's horsehide leather that covers big league baseballs. No one has ever found it's equal to withstand hard knocks. For centuries the finest Cossack saddles have been made of horsehide. Army officers' boots too.

But, until recently, this leather could never be satisfactorily used in work shoes. It always tanned up too stiff. Now in our own tanneries we have a special process that makes it pliable. *Actually softer* than ordinary leather. And it *always stays* soft.

Even after many wettings it dries out soft as velvet.

Did you ever find this in a work shoe before?

Only the choicest hides go into our Wolverine shoes. We tan them ourselves. We start with the hides and produce the entire shoe. And we make work shoes only. We are specialists. That's why you can expect to find these shoes different from any others. And you won't be disappointed.

There's a Wolverine shoe for every need. Farm, shop, railroad, mines, oil fields or woods. Thers's a style that will suit you exactly. Send today for our complete catalog.

If your dealer hasn't Wolverines, please write us. We will send you our catalog and the name of nearest Wolverine dealer.

1-To Paint
2-To Repair
3-To Let your property run down

Take Your Choice

If you don't paint you must be continually replacing decayed and rotted timbers with new. Needless waste and extravagance, certainly, but your only alternative is good paint.

76 years' experience has enabled *Lucas* to produce a paint that, in addition to its beauty, protects your property from decay and weathering. The answer is

Lucas Tinted Gloss Paint

IT COVERS—more square feet per dollar.
IT BEAUTIFIES—like the hand of nature.
IT LASTS—and lasts and lasts.
IT PROTECTS—like a coat of armor.
IT IS ECONOMICAL—costs less both first and last.

You can preserve your property on convenient time payments. Ask the *Lucas* dealer in your community or write us for name of nearest dealer.

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

THE grape vines have been pruned and are ready now for an early cultivation. Fertilizer containing a generous amount of nitrogen will be applied and worked in by the cultivation. They are being trained on wires stretched along the rows and fastened on posts. We are trying to develop them by the Knifen system, which is to have an upright stem with branches leading out each way on the wires. Care and attention are needed to start them right, and not all of ours have yet the full number of branches started. Last year's growth was pruned back to three or four buds.

• • •

THE pruning of the peach trees has begun. This is always an interesting work to me. There are so many things to keep in mind all the time. There are never two trees just alike in growth. The growing habits of the different varieties are not the same. Each individual tree starts branches in varying numbers and at different places on the body. In pruning, one must size up all these factors then compare the tree as it is, with the ideal tree you hope to make it. More than that, one must try to visualize the tree as it will appear in four, five or even ten years from now. Pruning is an art, and one has but little time to think of anything else when he is practicing it.

• • •

EVERY year we have several inquiries asking how to combat cutworms. Sometimes these pests are plentiful enough to seriously injure general crops, especially corn, and they are almost always a factor to consider in gardening and truck farming. They are generally to be found in considerable numbers in sod land of two or more year's standing. Poisoned bait recipes are often recommended as the best means of combatting them. A letter just received from R. H. Weaver, of Clearfield County, Pa., states his experience in the following. We would like to know whether other readers have tried acid phosphate for this purpose, and with what results:

"I have seen several articles in your paper concerning the control of cutworms. I have controlled this pest for the past twenty years by the use of 500 pounds of acid ph phate to the acre. For the last years I have raised cabbage on land and have had no trouble w cutworms. As soon as possible the land is plowed I drill in pounds of acid phosphate with grain drill. The soil is then well rowed.—R. H. Weaver."

• • •

PUBLIC sales of farm and ho hold equipment are a source of terest in rural neighborhoods. psychology of the crowd at a live vendue is about the same in neighborhoods. A good part of attraction is due to the opportu for social mingling. They are first out-door events of the sea and, even tho the weather is not ways the best, people overlook feature and stand for hours wat ing the progress of the sale. S people attend to enjoy the jokes repartee of the auctioneer, wh others have a hope that someth they need will go at a sacri Sometimes a seventy-five cent may be got for sixty cents and half-day's time.

• • •

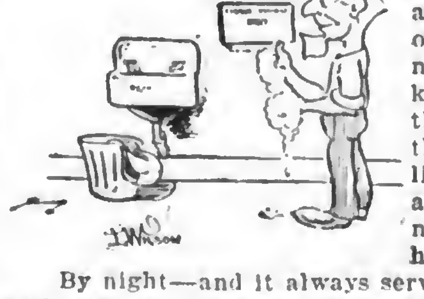
I NEVER knew a neighbor which did not have its junk bu Sometimes it is a real junk de who does a legitimate business that line, but it is frequently farmer who has a mania for buy broken machinery, old iron, w out tools and other stuff which body else wants. The farm belo ing to this kind of buyer is gene to be recognized as you pass by it is only necessary to look over array of goods arranged for a clo out sale in these days to realize little new farm machinery has bought by farmers during the five years. In some cases it w seem that the farmer had only courses open to him: Either he to make a sale, or he must buy equipment before he could do cessful farming. The strange par it is that all the stuff is always —R. P. K.

Mr. Wombat insisted on his ordering ice cream every day. S days he ate it and some days didn't touch it. His wife had ar the question of having it every but he was firm. So she asked chum to put in a word. After hesitation the chum did so, and Mr. Wombat explained his posit

"Ice cream," he started, "is a that I like to have on the table. eat it or you don't eat it. In ei case that ends the transaction. can't warm it over."—Hols Breeder and Dairyman.

THE CHEERFUL PLOWMAN

The Passing of the Roller Towel



IN THE olden day how I used to sco at the sight of the tavern roller to as it hung by the granite dish; on a thi of a broom-stick, mounted high. It w never clean and was never dry, as a hom kept man might wish! Face after face, the passing throng, left softened dirt they passed along, on the crash of its be like loop, till by ten o'clock it was blotch and black, and by noon so stiff it wou nearly crack as it moved like a rolli hoop!

By night—and it always served its day—it had faded out to a weat ered gray, as it worked on its hundredth face; an embattled flag, it c tinned there till another morn when its son and heir was subpœnaed take its place!

"Must I always dry in this wretched way? Is there no escaping I used to say, as I paused with my face adrip: "I could use my kerchief, b then I might need it on the homeward trip tonight!" Then I tried wi a dogged grip!

How I escaped in those early days from a dozen deaths in a doz ways is a mystery now to me! But now, thank heavens, my neighbors' so and all the hosts of their little ones from the circular towel are free! S tissue towels, may their praise resound, in the restaurants and the clu around, with their surface of spotless white, in each garage and in ea hotel, have replaced the towel that I knew so well and banished the pe from sight.—J. Edw. Tufft.

A JOB FOR DYNAMITE

Explosives Simplify the Task of Ditch Digging

DITCH digging with dynamite is no mystery. The right of way is selected generally along the lowest section of the land to be drained, so that a maximum fall to carry off the water can be secured. The width and depth of ditch required depends upon the amount of water to be carried away and the fall which can be secured. Land which permits a good slope for a ditch can be drained with a smaller ditch than land which is practically level so that a minimum fall can be obtained.

The smallest practicable ditch that can be dug with dynamite is about two feet deep and about four feet wide on top. This size of ditch can be blasted with a single line of holes about two feet deep and spaced approximately twenty inches apart, if in muck soil or heavy clay saturated with water.

Dimensions for a Larger Ditch

Dry soils require a different spacing, the holes being a little deeper and a few inches farther apart.

If a larger ditch is desired, holes four feet deep and eighteen to twenty-four inches apart will result in a depth of about three and one-half to four feet and a top width of eight to ten feet.

In case still larger ditches are necessary two parallel lines of holes, the same as stated above, and probably six inches to a foot deeper will give a ditch from four to five feet deep and twelve to fifteen feet wide. The two lines of holes should be from twenty-four to thirty inches apart.

Type of Soil Makes a Difference

The type of soil has a great influence on the selection of the kind of dynamite and also upon the spacing of the holes. Heavy clay soil saturated with water or a muck soil such as is generally encountered in swamps can best be blasted with fifty or sixty per cent straight dynamite by the propagation method.

Dry soils of any nature, except very sandy soil, can be blasted by the electric method, using thirty per cent to forty per cent low freezing ammonia dynamite.

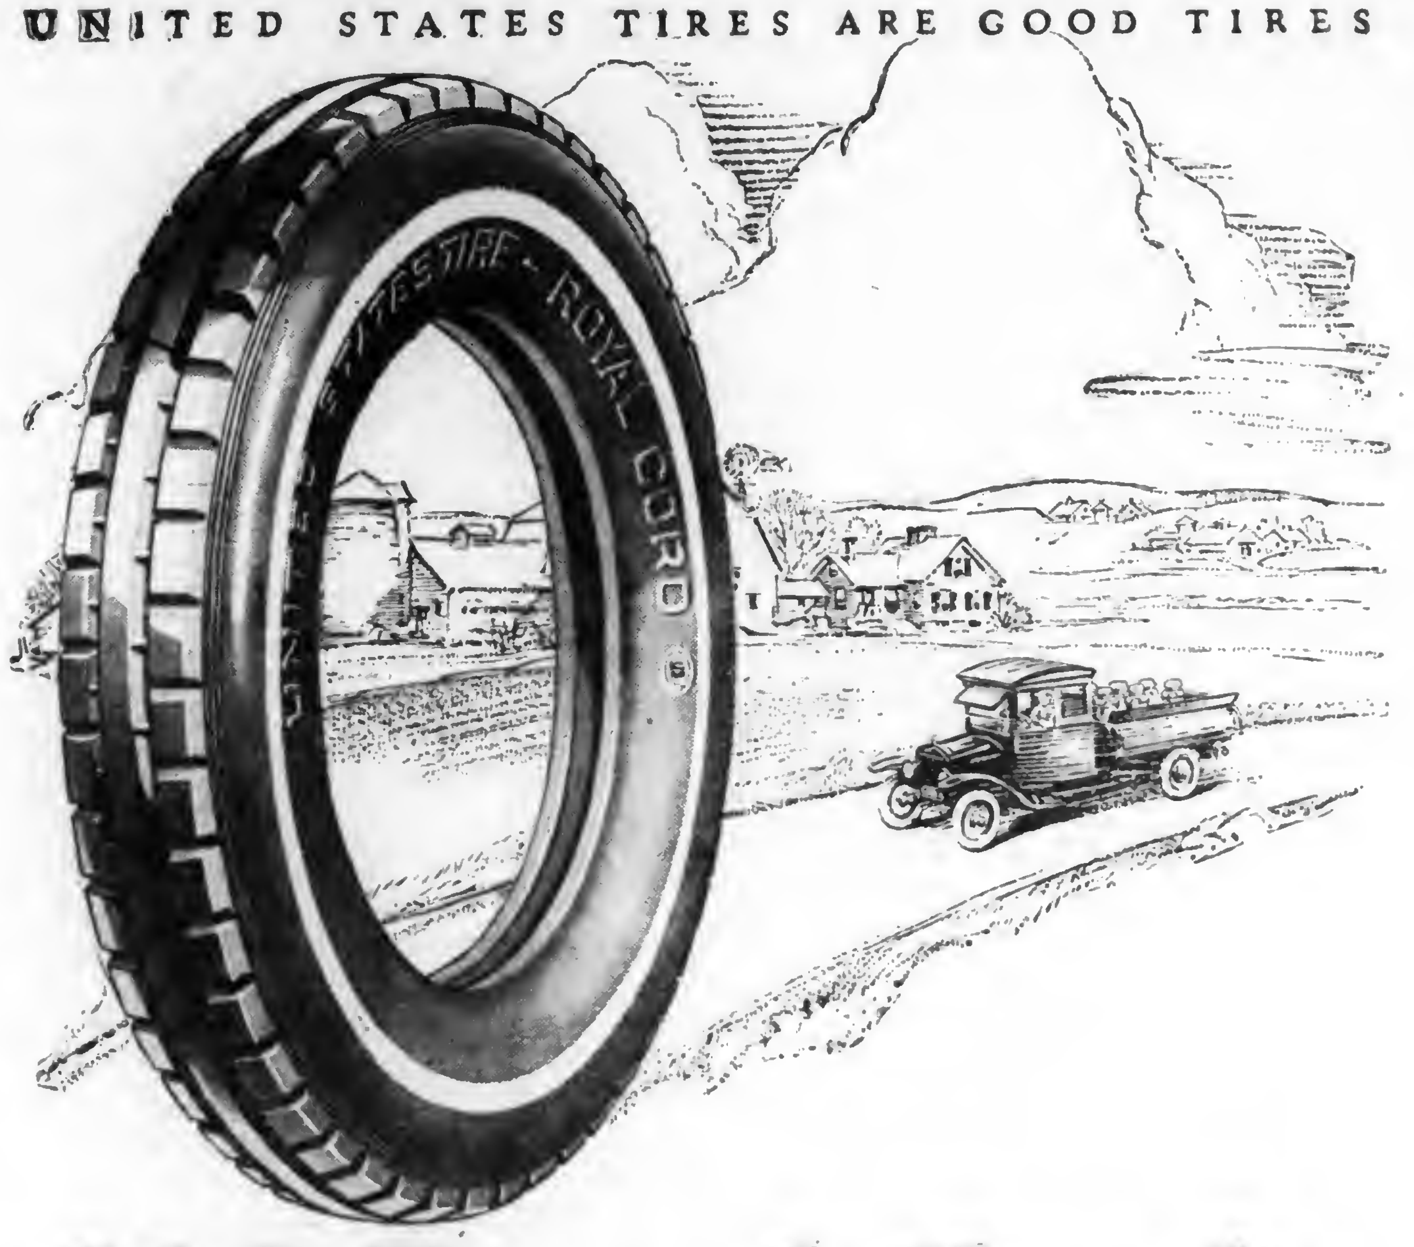
One of the most interesting developments in blasting ditches with dynamite is the fact that the experts have developed what they call the propagation method of shooting the ditches, i. e., one cartridge is detonated and this in turn serves to explode all the rest of the line. This type of shooting is done in wet soil and makes for economy.

Much Poor Seed Corn

FARMERS are facing a serious condition with respect to suitable stocks of seed corn for this year's planting, according to the state seed analyst at the New York Agricultural Experiment Station at Geneva where numerous samples are being received for testing. These samples of corn show a wide variation in the germination of available stocks of seed corn.

Of 41 samples of bulk seed corn tested in the state seed laboratory at Geneva in one week recently, the germination varied from 100 per cent for old corn saved over from last year to 25 per cent for new corn. The average for all samples during the week was only 78 per cent, and corn specialists say that seed corn should germinate at about 99 per cent to be worth planting.

UNITED STATES TIRES ARE GOOD TIRES



U. S. Royal Cords

THE makers of Royal Cords present these facts and ask you to consider where you can reasonably expect to find more tire service for your money.

1. Construction

Royal Cords are built of the new Sprayed Rubber and Latex-treated Web Cord by the Flat Band Method.

These three major improvements in tire making, developed, patented and owned by the United States Rubber Company, have added materially to the uniform quality and service of these famous tires.

2. Resources

The rubber plantations and fabric mills of this Company provide an economic supply of raw materials. Strategically located factories and branches cut the cost of manufacture and distribution.

3. Quantity production and fresh stock

The confidence of both dealers and car owners in Royal Cords insures a constant demand and ready sale.

Manager Pomona Gardens, Newark, Delaware

Heavy Fertilization of Plant Beds—Mulches

THE need of using a non-crusting soil for all kinds of seed planting indoors has impressed itself upon me strongly, lately, in connection with flats of tomatoes, peppers, and eggplants. Two kinds of soil were used, one of them forming a crust if the top layer became at all dry. Sometimes the germinating seeds were able to raise the crust but not to get thru to the light.

Every time we broke the crust to help the plants, and later watered when the flats became dry, bad attacks of damping off occurred, while in other flats of the same soil and with the same seeds planted, when it was not necessary to break the crusts by hand, no damping off occurred.

This was particularly noticeable in the case of flats of Comet tomato seedlings, some of which lost fifty per cent by disease, others none at all. All were side by side on the greenhouse bench. There seemed no way to give these flats the necessary water without causing damping off. The only preventive would be to use a soil with more manure or more sand in it.

Present-day Tendencies

Two tendencies are noticeable in present-day handling of tomato seedbeds in the open. One is the increased use of plant food, both manure and fertilizer. One man I know grew his best plants after plowing under manure at the rate of twenty tons to the acre and using on his quarter-acre bed a ton of commercial fertilizer. That means fertilizer at the rate of four tons to the acre.

Another young man, one of the most successful plant growers in Maryland last year, used the following for an acre plant bed:

alfalfa sod
18 tons rotten manure
10 tons chicken manure
1500 pounds 2-8-5 fertilizer
2½ tons leaf mold for mulching
700 pounds tankage for mulching

One cannot make such applications as these without a large expenditure of money, and yet observant growers of tomato plants are finding that it pays to feed the plants well. If you grow a million tomato plants on an acre, as it is possible to do, you can see that a great deal of plant food is going to be taken out of the soil.

Choice and Handling of Soils

The other tendency is toward the choice of soils or the handling of soils so that a perfect stand of plants may be secured. Many a bed is well fed and well planted, but the seeds germinate poorly because a crust forms. Even loamy soils do this in rainy weather, especially when very heavy rains occur.

Growers are getting good stands of plants even on heavy soils by covering rows with leaf mold, fertilizer tankage, pulverized imported moss, or other material that cannot get hard after rains. For small beds the leaf mold is ideal because it is without cost, if we do not count the labor of gathering.

On a large scale, leaf mold costs heavily in labor. Hereabouts sufficient moss for an acre may be secured freight paid, for around sixteen dollars, and it is doubtful whether leaf mold could be gathered at much less cost. These artificial coverings are looked upon as insurance.

Taking a chance on getting a stand, the average grower is also inclined to take a chance on the quality of the seeds he uses, so that he will not lose much if the seeds come up poorly. With good seed, a mulch, plenty of plant food, and provision for smudging or heating in case of frosts, a man is pretty sure to get not only plants for his own use but a surplus for sale. That surplus is apt to be one of the most profitable crops on his farm.

Mulch Used on Rows Only

It is to be noted that the use of mulching material for getting better germination does not mean that the whole surface of the soil is covered, but only the rows just above the seeds. If the seeds are sown with a drill, the covering plows are removed, the only covering of soil being that which is put on by the rear

of the drill. This is not likely more than a quarter inch. The ing material is then spread by along the rows above the seeds. e case of black stuff like leaf or muck soil the dark color bly helps germination by mak e soil warmer, the black color ing the suns' rays.—W. C. P.

Tomato Men Can Their Own

THE marketing of tomatoes was the special subject discussed at the recent meeting, when Maryland farmers packed the Chestertown Court House at the call of the Kent County Farm Bureau. E. Thomas Massey acted as president; Wm. G. Smyth, secretary; H. B. Derrick, farm agent, assisted. Mr. Massey introduced Mr. Smyth, who said that 6000 acres were planted in tomatoes in Kent County last year; the average yield per acre was only four tons. He pointed out that at twenty-five cents per basket the retail merchant makes three and one-half cents per can; the wholesaler, two cents; the broker, one and three-quarter cents; the packer, two cents, while the farmer gets what is left—one-half cent per can. The average pack is eight cans to a basket.

What Cooperation Means

A forceful address on the tariff and cooperative canning was made by C. E. Gelder, Chairman of the State Tomato Committee of the Maryland Farm Bureau. Mr. Gelder gave a cryptic definition of cooperation: "It means to organize and stick." When the farmers and the canner worked together at Princess Anne, Somerset County, the farmer got twenty-seven cents per basket in 1923 and thirty-five cents in 1924.

Got Forty Cents—Not Twenty-five

In Hurlock, Dorchester County, last year, several local canners offered twenty-five cents a basket. The farmers would not accept this and after conferring with Mr. Webster, a canner, thirty of them joined with him in the marketing of their tomato crop. An important stipulation was that the farmer should receive twenty-five cents per basket before the canner should share in the profits. The season's pack was 30,000 cases. The thirty farmers planted an aggregate of 320 acres, and each received forty cents a basket with the prospect of two cents more to come.

Mr. Webster gave this advice: "Join a cooperative canning proposition and be delivered from committing a sin—bootlegging your tomatoes."

Efforts will be made to start cooperative canneries at several places on the Eastern Shore, besides the one to be begun at Cordova, Talbot County.—Marylander.

---

s Blossom End Rot

r the past three seasons I lost almost my entire toma crop with a dry rot. Last r I set out 150 plants. They splendidly and were load with large green tomatoes. t the time they began ing red a rot would set in the blossom end of the fruit, I only harvested about two ls of sound tomatoes.

ould spraying with Bor x stop this trouble? If so, you please tell me how and when to spray and to prepare the solution?— M. R., Bradford County, Pa.

r tomatoes suffered from a known as blossom end rot. erally comes when the water in the soil is too plentiful or rce; sudden changes in water , as when heavy rains follow drought, sometimes bring it my experience staked toma re more likely to have it than that have been allowed to grow e ground. Spraying will not as the trouble comes from the plant.

thing you can do to keep the ter supply constant during the will do a great deal to pre blossom end rot. The most cal thing, aside from cultiva nd watering, is a mulch of or straw around the plants, a foot out from the stalks sides. This mulch is intended the soil from drying out too If one plans to use a mulch h manure, he should probably manure or fertilizer in pre the ground for the tomatoes, with two dressings of man may get too much vine growth t enough fruit.—W. C. P.

Motto—Be On Time

ARLY to bed and early to rise makes a man healthy, y and wise." This phrase was to us at bed time by our in our younger years when trying to get us off to bed but it can be applied also to on time.

ve been at about ten farmers' gs during this winter and I t the greatest hindrance to success is that the farmers fail on time. I went to a meeting, for one o'clock, only to find ere was no one there at one I went back in a half hour und one or two, and in an d a half, enough had arrived the meeting.

things are disgusting to farmers as well as old. I was reading an account of the who were to take honors noted college in Ohio, and I that a certain fellow was to away the highest honor. In C. A. meeting two years ago this fellow say: "My motto on time.'" Here is something all to think about. This boy ways on time for class and awarded the highest honors. all try to be on time.—H. A. diana County, Pa.

at is the shape of the earth?" the teacher of Johnny.
ny said that it was round.
w do you know it is round, y?"

Johnny replied, "All right, are, then, I don't want to n argument about it."—Mar owers' Journal.

FOR TEN YEARS—DEPENDABLE

Exceptional dependability has been a characteristic of Dodge Brothers Motor Car since the day the first of these sturdy cars was marketed.

Not once in a decade has it failed to uphold and enhance its reputation for faithful performance.

The reason for its consistent goodness and continued betterment points directly back to the ideals of the founders.

Instead of fluctuating between an endless series of annual models, they determined to concentrate on the perfection of a single chassis.

Dodge Brothers Motor Car today is the embodiment of that ideal—an ideal that will endure as long as the institution itself.

Replace Plant Food

Removed by Last Year's Crop

With every crop harvested your soil contains less plant food.

The use of manure and crop rotation replace only a part of the elements removed by crops.

Can you expect your soil to produce a paying yield of sound, plump grain when you are not putting back what is needed?

V-C Fertilizers contain those elements of plant food that Corn, Oats and Potatoes require. Make a full crop this year by using V-C Fertilizers on every acre you plant.

V-C Fertilizers represent the best that the science of chemistry and agricultural practice know about the subject of plant food.

Ask your local dealer for V-C Fertilizers or write

Treatment for Brown Rot

What is the best spray for brown rot in peaches and which would be best for dormant spray, lime sulphur or oil spray.
T. L. S., Beaver County, Pa.

Brown rot is controlled in three ways: by collecting and burying or burning the old mummied fruits before spring, by thinning the young fruits so that they do not touch each other, and by spraying.

The most convenient spray material to use is dry-mix lime sulphur. This is made by mixing, while dry, eight pounds of flours of sulphur, four pounds of hydrated lime and one-half pound of calcium caseinate (any casein "spreader"). This requires no boiling, and is added to fifty gallons of water. It should be applied first, when the calyx "shucks" are pushing off the young fruits, immediately after blossoming, again two or three weeks later, and still again about four weeks before the fruit ripens. It is customary to add arsenate of lead powder to this spray at the rate of two pounds to fifty gallons; this controls the curculio, which makes wormy peaches and also spreads the brown rot.

An oil spray is preferable for the dormant treatment if the trees are very badly infested with scale insects, as the San Jose scale, or peach lecanium. Ordinarily, however, the lime-sulphur is preferable, because it not only kills scale insects but also has distinct value in the control of some diseases, as apple scab, if applied as a delayed dormant treatment to apples, and in the control of peach leaf curl, if applied as a dormant treatment to peaches. The oil sprays are insecticides only; the lime-sulphur is both an insecticide and a fungicide.—S. W. F.

Sterile Quince, Black Knot

What can I do to a quince bush seven years old, which has never borne but one quince in that time? It has blossomed several times. We also have some plum trees that bear and some that do not. They are native trees, an excellent variety of yellow plums with a sweet, delicious taste. During the summer months the branches will burst open lengthwise and a spongy brown substance will ooze forth; this later becomes hard and black. I think it hurts the trees. It has spread to nearly all of our plum trees. I cut off quite a lot of the branches.—M. G. T., Luzerne County, Pa.

It is as difficult to diagnose a trouble without knowing all the symptoms and conditions, whether the ailment be human or botanical. Were the blossoms injured by frost? Has the bush grown well? Is it free from borers? Were the blossoms "blasted" by fire blight, or the young fruits destroyed by fungous disease such as rust or fruit spot?

Since the quince is not usually self-sterile, like many varieties of apples and pears (that is, unable to set fruit with its own pollen and needing cross-pollination), it is probable that the failure of the blossoms to set fruit lies with frost, or low vigor, or disease. Spray it, as you would an apple, and watch results.

Knots Should Be Cut Out

Your plums are affected with black knot, a funguous disease. Spraying with self-boiled lime sulphur, or dry-mix lime-sulphur suggested for brown rot of pe in this issue of Pennsylvania F er, prevents this disease from ing the tree. The knots should be cut out whenever seen, p ably before the buds burst in sp as well as during the summer.

The spray schedule for the would be: (1) Dormant spray fore leaf buds burst, lime-su solution diluted to test 1.03 sp gravity, or approximately on eight; (2) Calyx spray, just blossoms fall, dry mix, and 2½ p of arsenate of lead powder gallons water; (3) Repeat the ceding application ten to t days later, and again two or weeks before the fruit ripens. spray should control brown ro curculio as well as black kn S. W. F.

Fire Blight Kills Pe

I want to plant some p trees again. Which is the b kind for fall and winter? ground will not raise p trees; they grow for one or t years, then the blight touc them and they die.—F. E. Clarion County, Pa.

Some of the best fall and w pears for your section are Fl Beauty, Seckel, Lawrence, A Louise Bonne, Winter Nelis. The fer can be added to this list if used for canning, not for d Winter Nelis can be kept in a cellar until March. The first are, all things considered, the reliable.

Your pear trees are fro blight, a bacterial disease, a cause the ground is not su This disease cannot be contro spraying. The treatment is Keep the trees growing slowly they do not blight badly. means that after they are t three years old they should st sod and should not be manu fertilized heavily. (2) Grow eties that are least likely to b such as Seckel and Flemish B The latter variety will scal crack badly, and will need m spraying. (3) Cut out bl limbs, not in the summer, but winter, being sure to cut do enough to include the blight ers which are formed on the or main limb, where the has run down the branch "holdover cankers" are the means of propagating the dise other year; most of the bl limbs dry out and are not a of new infection.—S. W. F.

Receipts at Lancaster

ECEIPTS of fruits and vegetables in Lancaster have been very un m for the past two years, as wn by the comparison of 541 cars year with 529 cars in 1923, ac ing to a report of the Pennsyl ia Bureau of Markets.

these 514 cars were coupled to er the caboose would be four from the engine. There would half mile of cars from Florida, alf mile of cars from New York , and the remaining three miles cars would represent sixteen r state and two foreign coun . This does not include Lancas County products marketed in the thru wholesalers, retailers, or t to consumers at the curb mar

Bananas at Top of List

ore cars of bananas came into aster than any other product. fifth of the total receipts, or 108 consisted of this fruit. Prac lly all of these cars came thru port of Philadelphia, two-thirds ing during the six months of l to October.

enty-eight cars of mixed pro were reported for the year. of these originated in the Phil phia wholesale produce market, re small lots of various fruits vegetables were loaded for ship to Lancaster wholesalers.

ange receipts totaled seventy ars, equivalent to the 1923 busi A distinct preference was n for Florida oranges, since 85 cent of the receipts were from Gulf State, while the remaining n cars came from California.

ly two-thirds of the seventy e cars of potatoes received were stock, and about twenty-three unloaded in Lancaster were for purpose. These latter came Maine, New York, Vermont, igan and North Dakota. Of the cars of table potatoes, two s were early stock from Vir and other southern states; were only eighteen cars of late es. This small amount is not rising in view of the fact that ster County raises over a mil bushels of potatoes and is a rel ly light shipper, indicating and large sales in Lancaster other nearby markets.

"GOOD EQUIPMENT MAKES A GOOD FARMER BETTER"

Standardize *on Good Equipment*

THERE is a dealer in your town who has in his store many modern farm machines called by the name "McCormick-Deering." When you make new investments in farm equipment it will pay you to stick to this dealer and with these machines—to standardize on the McCormick-Deering line. Here are some of the benefits that will be clear to you during many coming seasons:

Quality. These machines are the result of 94 years of experience and betterment. They are as near perfect as human skill can make them. They are the standard of the world, famous for dependability and long life.

Service. The value of McCormick-Deering equipment is always greater because of the service that stands ready behind every McCormick-Deering machine. No matter how old your machine, this Company assures a helping hand in case of need. We are furnishing repairs today for McCormick and Deering binders and mowers that have worked through forty seasons.

Unit Operation. In these days of big operations and of power farming, be sure that your farm machines work together as a unit and like one machine. McCormick-Deering tractors and the many drawbar and belt machines are designed and built to work together. Matters of capacity, equipment, adjustment, hitches, etc., are all worked out for handy, fast, unit operation. Each new method and machine you adopt fits in without delays or extra expense when you use McCormick-Deering machines.

Interchangeable Units and Parts. Standardization in McCormick-Deering manufacture enables you to make emergency repairs and so save valuable time. A great many of the parts in McCormick-Deering machines are being made so that they will be interchangeable between one machine and another. This advantage may sometime mean hundreds of dollars to you in the midst of the heavy summer season.

Standing with the Dealer. The McCormick-Deering dealer is in position to give you the best of co-operation. It will pay you to confine your purchases to the one dealer and make of yourself a favored customer. Scattered purchases cannot make you an important customer with any dealer.

Re-sale Value. McCormick-Deering equipment always stands high in re-sale and trade-in values. Notice how the bidding goes at auctions when a McCormick-Deering machine is put up.

Remember that it is "good equipment" that "makes a good farmer better," and that McCormick-Deering is the old reliable line. Standardize on farm equipment as the wise manufacturer does when he buys materials and factory equipment, and when he builds the product he sells. Standardize as big companies do when they buy fleets of motor trucks. Standardize on equipment as the good farmer does on breeds of livestock. They all standardize and so simplify their operations. It is good business all around.

Squabs as a Side Line

I am employed at the Philadelphia Navy Yard and will soon reach the retirement age. Before that time I would like to quit and develop a small poultry business. What do you think of the prospects for a combined poultry and squab farm?—J. H., Gloucester County, N. J.

The plan of combining poultry and squab raising is sometimes successful but requires considerable experience. In my experience with squabs I found them interesting but not as profitable as hens. The pigeons had large crops and consumed a lot of first class grain but it was more difficult to market the squabs to advantage than to sell strictly fresh eggs which are in much greater demand than squabs in most communities.

Your plan of starting on a small scale and working up gradually will give you a chance to learn the business without the risk of large losses. By following your poultry books and journals and the seasonable material in Pennsylvania Farmer, you will learn methods that are being used profitably by poultrymen who now earn their living at the business.—R. G. K.

Leg Weakness in Hens

We have a flock of Silver Laced Wyandottes. Some of them develop a little bump on top of the head, the feathers come off and the head gets pale. They become weak in the legs, fall over and finally die. Please tell me what the trouble is.—R. E. A., Lawrence County, Pa.

The addition of two per cent ground limestone to the laying mash often helps to prevent the leg weakness that sometimes troubles hens in the spring. The loss of the head feathers and swelling on top of the head is sometimes caused by acti of the male birds. If the lump c tains pus, lance it with a sharp and wash the wound with disinf tant. Perform a postmortem on hens that die and note the condi of the internal organs, especially liver. This may give accurate cl as to the cause of the losses.—R.G

Rabbit Market Limite

Where can I find a ready mar ket for rabbits next summ and fall? I like to have so way to earn money and as sold all my turkeys last fall thought I would like to try rab bits.—Mrs. P. A., Susquehann County, Pa.

Many buyers of poultry in large market centers will also h dle rabbits. I would advise you write to the New York State Bu of Markets, New York City, or Pennsylvania Bureau of Mark Harrisburg, and obtain the addr of commission dealers who ha both live and dressed rabbits.

Little Demand in Small Town

Some rabbit raisers in our se make money retailing rabbits motorists. On a main traveled there is often a good sale for rab both for meat and as pets for dren. A crate of live rabbits ca kept in front of the house by sign and a few at a time can be ed ahead and held in the cellar customers arrive.

Rabbit breeders in our se usually ship live rabbits to com sion dealers. Light shipping b are made into crates by removing side and splitting it into slats w are nailed back.

In small towns rabbits are cult to sell to dealers during summer. I found in several n towns that the dealer who w take fifty broilers was overst when he had three rabbits.—R

Memories of the Sugar Cam

NEARLY all men who as boys helped to make maple sugar have a love for the work—which to them is play—and just to mention a sugar-maple tree to them is to start a train of memories which brings a reminiscent look to their eyes and a bit of encouragement is rewarded by interesting tales of the sugar camp. Many boys do their first "sitting up all night" in a sugar shanty, and the reason for this sleeplessness is the necessity for keeping the syrup from scorching.

Before modern tools were invented it was possible to make very good sugar, tho the implements used were crude. I remember finding at the roots of maple trees on my parent's farm odd-shaped troughs hewn out with an axe by my grandfather. These were replaced by wooden buckets later.

The Old Sumac Spiles

The first spiles I saw were made of sumac. The soft pith was forced out and the sap ran thru the opening. An old tree near my home bears, or did bear, in its trunk the remains of an older style tapping than I remember. The trees were tapped with a semi-circular gouge driven in twice to make a round hole and then driven in again lower down, to receive a basswood spout much larger than any later spile. The trees were badly injured by this method.

In the home of my niece h an old neck-yoke, a block of hollowed out to fit a man's s ders, with a semicircle cut in middle to admit his neck. The is light and shaved very thin points extending over the sh stout cords are attached. These tend to the hands and end in on which were hung the bucke gathering sap.

When Big Iron Kettles Were

The modern evaporator's ea ancestor of which I have any kn edge was a huge iron kettle over an open fire. Usually two tles were used. One heated the sap and from its contents the kettle was supplied. The s kettle was thus kept at the b point continually, its tendenc boil over being checked by th plication of a circle of grease the top on the inner side or b suspension of a bit of fat po that it hung an inch or two b the kettle's top, to prevent the bles rising higher. Later a were built and shallow oblong held the sap. These are now rep by evaporators in the larger ca

Much fun, and in earlier some excitement, accompanied s making. When sugar is to be the syrup is usually taken to farm house to be reduced to su

The camps on warm spring nings are rendezvous for the y people. It is a great place to tell stories, sitting on a log by the open fire or on benches in the shanty, with the odor of boiling sap filling one's nostrils, and there are usually cups or spoons or wooden ladles which one dips into the pan and tastes as often as one likes.

Those Exciting Sugar Parties

When the sugar is done each one supplies himself with a receptacle full of snow and on this a ladle full of hot sugar is poured. A moment of waiting and one picks up a piece of amber sweetness which is neither equalled nor excelled by any other earthly sweetness anytime, anywhere.

Some people prefer to pour the hot sugar in saucers and beat it until it is creamy-white and nearly hard, eating it while it is warm. Those who understand the nature of it like to have on hand a jar of sour pickles because if you sandwich them in between helpings "you can eat more" and the thirst which the sugar causes is allayed. What is the moral to the story? The preservation of the sugar maples. We must preserve trees and doctor trees and plant trees if we hope to have water to drink, moisture for crops, houses to live in and many other allied blessings. It is well that many people are waking up to the seriousness of the situation. Many of us who love the trees for their shade and their beauty rejoice because much is being said and printed in protest against their destruction.—M. C. S.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt e of utmost interest to poultry raisrs who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in er own words:

"Gentlemen: I see reports of so any losing their little chicks with White Diarrhea, so thought I would ell my experience. I used to lose a reat many from this cause, tried any remedies and was about disouraged. As a last resort I sent to he Walker Remedy Co., Dept. 517, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 0c packages, raised 300 White Wyandottes and never lost one or had ne sick after giving the medicine nd my chickens are larger and ealthier than ever before. I have ound this company thoroughly reliable and always get the remedy by eturn mail.—Mrs. C. M. Bradshaw, eaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the acillus Bacterium Pullorum. This erm is transmitted to the baby chick hrough the yolk of the newly hatched egg. Readers are warned to beare of White Diarrhea. Don't wait ntil it kills half your chicks. Take e "stitch in time that saves nine." emember there is scarcely a hatch ithout some infected chicks. Don't t these few infect your entire flock. revent it. Give Walko in all drinkg water for the first two weeks and u won't lose one chick where you st hundreds before. These letters ove it.

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, d., writes: "I have lost my share of icks from White Diarrhea. Finally ent for two packages of Walko. I ised over 500 chicks and I never st a single chick from White Diarhea. Walko not only prevents White arrhea, but it gives the chicks rength and vigor; they develop icker and feather earlier."

ever Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, wa, writes: "My first incubator icks, when but a few days old, ben to die by the dozens with White arrhea. I tried different remedies d was about discouraged with the icken business. Finally, I sent to e Walker Remedy Co., Waterloo, a, for a box of their Walko White arrhea Remedy. It's just the only ing for this terrible disease. We ised 700 thrifty, healthy chicks d never lost a single chick after e first dose."

You Run No Risk

We will [illegible] Walko White Diarrhea medy entirely at our risk—postage pre—so you can see for yourself what a nder-worker is remedy it is for White arrhea in baby chicks. So you can prove s thousands have proven that it will your losses and double, treble, even druple your profits. Send 50c for kage of Walko—give it in all drinkwater for the first two weeks and th results. You'll find you won't lose chick where you lost hundreds before. It's a positive fact. The Leavitt & nsen National Bank, the oldest and gest bank in Waterloo, Iowa, stands k of our guarantee. You run no risk. you don't find it the greatest little k saver you ever used, your money be [illegible] refunded.

Where Are They At?

FOR many years I have been a reader of Pennsylvania Farmer, especially the department, "Our Farm, Where an Editor Works and Thinks," as I had the pleasure of meeting him several years ago at an institute in Tioga County.

I desire to say a few words about prices now as compared with those received by farmers twenty-five to thirty years ago. During those years the farmers of Tioga County, as well as the farmers thruout the whole country, went thru a period of over-production that has never been equaled. How farmers lived thru it is still a mystery to me.

In 1884 the writer inherited fifty-four acres of rough land—a cut-over bark slashing with but few acres of cleared land and no buildings. I had nothing to do with except a pair of horses, a cow and a half a dozen chickens. My ambition was to convert this land into a farm and a home. By working fifteen to twenty hours a day I accomplished this in a few years. Meanwhile, tens of thousands of other young men were doing this all over the country, with the consequence of a destructive over-production. Many of the men lost all their holdings since their incomes were not sufficient to pay taxes, interest, etc.

Prices Then and Now

Following are some of the prices paid farmers from 1890 to 1905. Hay, $6 to $10 ton; buckwheat, 70c to $1 per 100 lbs.; corn, 80 to 90c per 100 lbs.; oats, 25c per bu.; potatoes, 10 to 50c per bu.; cows, $25 to $30, veal calves, 3 to 4c per lb; beef by the side 4c per lb.; pork, 4c per lb.; butter, 10 to 20c per lb.; eggs 10 to 20c per doz. apples 50c to $1.00 per bbl.

Prices 1920 to 1925:

Hay, $15 to $25 per ton; buckwheat, $2 per cwt.; corn, $2.50 to $3 per cwt.; oats, 65c to $1.00 per bu.; cows, $50 to $100; potatoes, 50c to $2.00 per bu.; veal calves, 10 to 15c per lb.; pork 15 to 18c per lb.; butter, 45 to 60c lb.; fresh eggs, 10 to 80c doz.; berries, 20 to 30c qt.

Yet, some farmers tell me there is no money in farming. Where are they at? J. E. F., Tioga County, Pa.

You, too, will want it
This marvellous *liquid* floor-covering that everyone is talking about-*applied with a brush*

Tile-like in appearance
Easiest to clean-Waterproof

for any floor: WOOD OR CEMENT INSIDE OR OUTSIDE

KOVERFLOR is entirely different from anything you have ever used.

It beautifies and protects all floors, creating a fresh, wholesome surface—tile-like in appearance—which is easily cleaned with a mop. It resists the most rugged wear and tear and is impervious to water, weather, oil and grease.

It prevents the elements of decay from attacking the flooring material. If your cement floors dust, Koverflor will stop it. It will also enhance their beauty and add to their value.

Koverflor is supplied in solid colors for any floor—wood or cement—inside or outside, Ideal for the porch. Also for cellars, garages, factories, stores, industrial and commercial buildings, steamships, yachts, boats, etc. Particularly effective for old floors.

Economical. Easily applied with a brush—just like paint. Hardware and paint dealers sell it. If unable to obtain it conveniently, we will supply it direct.

For practical booklet on Koverflor, clip the coupon.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Good Ensilage Will Make Both Milk and Beef

I have a farm of 109 acres. I am interested in a silo. Would one be a paying proposition or not? Would it be all right to feed silage to cows to make butter? What size would you suggest to feed four to six cows and six to ten steers? Would you recommend ensilage for chickens?—C. M. G., York County, Pa.

A silo is a paying proposition on a dairy or livestock farm. In the first place there is less loss in the corn crop when it is put into the silo than when it is allowed to cure in the field. Experiments with dairy cattle at Vermont showed that when the corn crop was harvested thru the silo, it made eleven per cent more milk than when harvested by the field curing method.

It Saves Room and Labor

In the second place the silo saves room. A large amount of feed can be stored in a comparatively small space.

Third, it saves labor. The corn is handled but once—when it is put into the silo.

Fourth, the silo provides excellent feed which is highly desirable for milk production purposes.

Experiments at the Pennsylvania State College also show that the most economical method of producing gains on steers is to feed them corn silage supplemented with cottonseed meal. Nine different experiments at four experiment stations all agree in showing that more milk is produced from the corn crop if it is harvested as silage.

An Aid to Butter Production

Silage is an excellent feed for cows from whose milk butter is made. It is succulent, palatable, and appetizing. It also keeps the cow's alimentary tract in good condition, and sharpens her appetite so that she keeps in good health. Silage should be fed after milking rather than before milking, so that no flavors from the silage may be imparted to the milk.

Any kind of a silo that fulfills the following requisites will be satisfactory. First, it should be air-tight and smooth on the inside. Second, it should be sufficiently strong to withstand the pressure of the silage, and durable enough that it will not have to be replaced for a considerable period of time.

A wooden stave silo is satisfactory when placed on a foundation of concrete. If the staves are treated with creosote it will materially increase the durability of the silo. This type of silo requires attention to keep the hoops at the right tension. The wooden staves should last from ten to fifteen years. It is probably the cheapest type of silo to erect.

Concrete, tile blocks, or brick may be used for a more permanent type of silo. The concrete silo may be built of concrete blocks, concrete staves, or with solid walls. If sand and gravel are available, and one can secure the forms for this purpose without too much expense, solid wall or monolythic concrete silo is quite satisfactory and may be built at moderate cost. The tile silo is quite popular in some sections of the country and brick silos reinforced with iron rods or heavy wire in the masonry have also been quite satisfactory. Some other materials used less frequently include iron, stone, and wood with a cement lining. Any of these materials will preserve silage satisfactorily if the essentials already mentioned are present.

Right Size for Small Herd

A silo ten feet in diameter and thirty feet in height should be a satisfactory size to take care of four to six cows and six to ten steers. It should be placed on a strong concrete base. Frequently it is advantageous to have a pit about three to four feet in depth lined with concrete. This gives additional depth to the silo without much additional cost.

Ensilage is not very satisfactory for chickens especially if there are not many kernels in the corn. The anatomy of the chicken is not such that it can handle much roughage. Chickens frequently become crop bound when fed silage. Therefore, it is better to use silage mostly for your cows and steers.—A. A. B.

Buying Tested Cattle

RECENT improvement in the milk market is being reflected in the increased activity of cattle buyers in Wayne County. Several cars of fine springers recently left the county. The latest car to go was purchased in the southern part of the county to be delivered at Port Jervis, New York.

While the most of the available tuberculin tested stock has been sold, there are still two or three carloads of purebred and grade Jerseys to be sold.—W.

Secretary Jardine on the Business of Farming

"THE American farmer is a business man. He has a greater capital investment than the average retail merchant. His business is vastly more complex than that of the average retail merchant.

"The labor problem on the farm is much more serious than in most other lines of business, especially because of the seasonal character of most farm work.

"More factors—at any rate, more factors that are not subject to human control—enter into agricultural production than into factory production, say. The selling and the distributing end of the farm business has proved difficult, partly because the turnover is limited by nature herself, partly because the farm unit is such that the same man has had to attend to production, distribution and everything else. I wonder if the city business man who had to work under the same conditions as the farmer would be able to show as satisfactory results as the farmer shows, even today."—Secretary of Agriculture Jardine in an interview in The Nation's Business.

GLOBE SILOS

Merit proved by time

TWENTY years and a Globe Silo is still in service. Why? They are built of the finest materials—spruce and fir. Heavy matching walls, double splines, sealed joints and adjustable doors make them absolutely air-tight. Not only now, but a generation from now. The extension roof makes a Globe Silo the cheapest per ton capacity—an exclusive Globe feature. Increases value of farm. Durable, convenient and profitable—these are the time-proved merits of a Globe. Write today for catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc.

GLOBE SILO CO.

More people are talking about this Fine Car than any other Car in America

Of course people are talking about this new fine Overland with six cylinders. *Of course* they are drawn into liking and admiring and wanting this remarkable car. For motor car buyers these days are real students of quality, close judges of value—buying shrewdly and keenly after making shrewd and keen comparisons. ¶The public was bound to admire the fascinating beauty of the new Overland Six. And bound to appreciate its fine comfort and luxury. ¶The power of this car is a joy. You can overtake and pass nine out of ten cars on hills, and likewise on the open road. In traffic the swift getaway of the new Overland Six makes cars around you seem listless and poky. ¶Great smoothness is engineered into the engine. The wonderfully balanced crankshaft is ingeniously drilled to receive perfect lubrication at all speeds. And by ingenious developments in six cylinder design friction and wear have been minimized to the vanishing point. That means great endurance. ¶You need but one look at the new Overland Six to know why it is receiving such an enthusiastic welcome. It has beauty and style, comfort and luxury, to a degree never before offered at such a low price · · · Willys-Overland, Inc., Toledo, O. Willys-Overland Sales Co. Ltd., Toronto, Can.
